It is now time that all plants from the field were in their permanent quarters inside. Any intended planting still to be done should be finished up without delay or the plants will not have time to shape themselves to produce a good mid-winter crop of flowers. Owing to the extra heavy growth the plants make outside during the month of August, it takes them longer to recover than it does those planted during July or early August. It is therefore necessary to nurse them a little more to get them to start off quickly. Keep the house a little close for a few days, and also give the plants several sprayings during the day to keep the foliage firm and crisp, and avoid getting the soil at the roots very wet.

A little shade at planting time is as beneficial as with July planting, but it should not be as dense nor allowed to remain as long on the glass before cleaning off. At this season the root action is considerably slower under shade and it is best to get the plants used to the full sunlight as quickly as possible. They will wilt a little at first during the middle of the day, but at night will stiffen up again and in a few days their roots will have a good hold in the soil.

The earlier planted stock is now growing rapidly, the roots having a good control of the soil. Do not give them any treatment that has any tendency to cause the plants to become soft or spindly. They delight in plenty of ventilation day and night. Keep the soil at the roots in an even degree of moisture so that the roots will work freely. They are better held a little on the dry side, to give the plants a vigorous, sturdy habit.

One of the most important parts of the routine of the work just at this time is to begin the fight against the thrips and red spider. The plants should receive sprayings of the nicotine preparations regularly once every week—and when syringing make sure the water strikes the under side of the foliage, this being the working place of the red spider. Also dampen the walls at the ends and sides of the houses every day. Do not allow any rubbish to remain under the benches and as quickly as any weeds spring up there, clean them out. Put on the wire or other supports, as soon as possible, even though the plants may seem to not need them just yet, it is better for the plants and gives one the satisfaction of having everything well in hand and you are sure that there will not be any danger of disease from the growths resting on the soil when press of other fall work comes rushing on.

Many of the varieties will be pushing up to bloom from now on, but it is not wise to let them come in indiscriminately. A good many of the blooms are short-stemmed and though there may be a demand for the best grade of stock with reasonable length of stem, there is very little realized from short-stemmed stock and it is better to thin them out on the plants before they develop and thus give the plants every encouragement for building up to produce good results a little later on.

C. W. JOHNSON.

The Automobile in Floriculture.

That the automobile is destined to take a still more prominent place than it does in the florists' business is certain. All up-to-date progressive business men, no matter what their line, realize the importance, one might say, the necessity, of quick delivery and here the automobile is far ahead of any horse vehicle. As to the cost of upkeep, dealers in "autos" persist in the assertion that the automobile is cheaper to run than the wagon hauled by horses, but in no single instance known to the writer has this been proven. The automobile has many and great advantages over any horse-drawn carriage or wagon, but cheapness, at the present stage of the game, is certainly not one of them, when the initial cost is taken into consideration, as it must be to arrive at any idea of the real running expenses.

But the small additional expense is usually, and we consider rightly, set down to advertising, for an up-to-date machine, either a small one for quick deliveries of small orders, or a large truck for heavy pot plants and palms, is surely one of the finest advertisements a florist can have. The ordinary delivery wagon does not give much scope for the decorator's art, but there is a great diversity in the shape and other peculiarities of the automobile, and makers are always bringing out something new. For this reason, and others, we can safely advise any retailer who can, without crimping his business in other ways, install motor traction for his deliveries, to do so without delay. Terms of purchase with payments extended over any reasonable period can be arranged with all makers, or practically all, and it is far better to pay for a good machine in installments than to pay a low price for one that will always be unsightly and frequently in the hands of the repairers.

The decorated automobile has a great vogue in some cities, especially in southern points where carnival weather can be depended upon, and it is only just that florists should patronize the industry in return. A great deal of money finds its way into the coffers of the retailers in towns where this kind of thing goes on, and although the quality of the flowers used is not of the highest in all cases, there is room for much ingenuity in arrangement. Unfortunately too many retailers who are new at the business do not consider the value of the flowers and the labor used, with the result that while a patron may pay perhaps $100 or even $200 for the decoration of his car, yet the florist is barely repaid for his stock and labor. This is poor businss policy from all points of view, and should be carefully guarded against. It is very well to give patrons satisfaction, but to give twice the value in a decoration of any kind that the price warrants is against all business judgment. Yet it is frequently done when decorating automobiles.

IRISES AT CYRUS H. McCORMICK'S, LAKE FOREST, ILL.

Society of American Florists.

REPORT OF THE PATHOLOGIST.

I beg to submit the report of the work which has been done during the past year with regard to the diseases of your crops. On account of the dry season relatively few of the diseases of florists' crops have been reported, so that I have nothing to give you relative to the appearance of any widespread or destructive diseases. Doubtless you have all suffered more or less from fungous diseases, and probably there have been, in certain sections, serious outbreaks of certain fungous troubles peculiar to different plants which you grow, but if so none of these have come to my attention. In accordance with the policy which we are following in the diseases of other crops we have concentrated our efforts this past year on the diseases of the gladiolus in the hope that we might clear up this problem more fully and give you something of definite value along this line. The $50 paid by this society for the use of the plant pathologist has been used in continuing the investigation of the bulb rots of gladiolus. This work is being conducted by H. M. Fitzpatrick under our immediate direction. Mr. Fitzpatrick is making an exhibit of the diseases of the gladiolus before the American Gladiolus Society, where he will also present a paper dealing with the progress of the work thus far. Mr. Fitzpatrick's work is a continuation of that begun by Mr. Wallace two or three years ago. He has made splendid progress on the problems this summer and we hope that sometime this fall or winter we may publish a preliminary bulletin on the subject. His work this season will practically clear the way for extensive experiments for the control of these bulb rots. He has now located the causal organism in a number of these bulb rots and has proved that they are responsible for the diseases in each case. There are several other bulb rots of gladiolus which he has not yet had time or opportunity to study. These will be taken up as they come to hand and thoroughly worked out. It is hoped that the American Gladiolus Society may see their way clear to co-operate with us for the further investigation of their problems. The presentation of this matter I have referred to some of the members of the society.

In order that these problems of yours may be properly worked out and results of value obtained, the whole time of an investigator must be given to them. The rose grower, the carnation grower and growers of other plants in this association have problems equally as serious and important as those of the gladiolus grower, and we should be very glad, indeed, to take up a study of the disease problems which you regard as most important in your business. It remains, however, for you to say what lines of work we shall take up and to make possible this line of investigation by your active co-operation. The small sum of $50 is entirely inadequate, understand, for retaining a man continuously on such an investigation. I outlined to you last year the method of such an investigation and it will not be necessary for me to repeat them. It strikes me that this great association could well afford to maintain at some college of agriculture at least one man who might give all his time to a study of the diseases of florists' crops.

There has now been provided at our institution a fund of $1,000 a year for two years to be used in conducting the investigation of the use of sulphur in the control of diseases peculiar to florists' crops. This has been available for some time but we have not yet succeeded in getting a man whom we regard as satisfactory for carrying out this work. We expect to get it under way this fall. An additional sum of at least $500 will be necessary to carry out this investigation work properly and I had hoped that this association might see fit to provide this

additional money by way of co-operating with us. I trust that this suggestion will at least have your consideration and that I may be advised as to what your wishes are relative to the further work which you desire to have done along these lines.

As in the past we shall be glad to receive specimens of diseased plants from any of your members at any time and to give what information we are able to from an examination of the same.

H. H. WHETZEL, Pathologist.

Gladioli Bulb Rots.

Paper read by Harry M. Fitzpatrick of Cornell University before the American Gladiolus Society at Baltimore, April 17, 1911.

In attempting to give a talk on any phase of gladioli culture before a body of men, who are as thoroughly acquainted with the facts concerned as this one undoubtedly is, it is only natural that I should be at a distinct disadvantage as regards my knowledge of the industry in general. However, as the talk is to be confined exclusively to a discussion of the diseases of the plant, it is not impossible that I may be able to present to you some few points of interest.

From the knowledge which has come to us during the course of our work, and from the data which we have been able to collect, it has become very evident that the raising of gladioli in this country and abroad has grown, as you are aware, into a surprisingly large industry, involving the use of many hundreds of acres of land, and the investment of many thousands of dollars. It has become just as evident also that this industry each year suffers a large loss, due to the ravages of various diseases of the bulbs. This loss is sustained from the hundreds of badly diseased bulbs which it is necessary to discard entirely, from the increased expense resulting from the extra work required for careful sorting prior to shipment, and the loss to the industry in general due to the discouragement of buyers and growers. It is highly probable that were there no diseases of the gladiolus, there would be many more grown, and a correspondingly increased demand for them. In this case as in that of most cultivated crops, the grower would probably be very much surprised at the actual amount of his losses if he should make a careful estimate of them. The distribution of the diseases is very general. We have received hundreds of bulbs from all parts of this country and from Europe, and they have in every case shown disease. Moreover, the diseased bulbs are so much in the majority that it has been very difficult to obtain perfectly healthy bulbs for our experimental inoculataion work. Even bulbs sent to us after careful sorting and marked "healthy stock" or "immune variety" have in most cases upon the removal of the enveloping scales shown small diseased areas, which need only time and favorable conditions to develop into larger ones.

But in spite of the growing importance of the gladiolus industry, and in spite of the most cosmopolitan distribution of the various diseases, the actual work that has been done on these diseases by plant pathologists has been surprisingly small, and in fact, amounts to practically nothing. You probably know that there is no publication to which you can refer, which will give you any idea of the causal organisms of the various diseases, or even vague hints as to methods of control. It has been very desirable, therefore, that work should be done in this field, and when in the winter of 1908 Professor H. H. Whetzel of the Department of Plant Pathology of the New York State College of Agriculture at Cornell University received diseased bulbs from a dealer in Chicago, he suggested to Mr. Wallace, at that time a student in the department, that he take up the study of the various diseases of the gladiolus. He did so, and gave the larger part of his time throughout something over one year to the investigation. The problem proved to be a particularly illusive and difficult one, but in the end he isolated the organisms responsible for at least two of the diseases, and had gathered together data from a large variety of sources, which made him the best authority in this country at least on the diseases of the gladiolus. At this time, however, Mr. Wallace obtained a more remunerative position and gave up his work on the diseases of gladiolus for work in other fields and his results did not seem to be sufficiently complete to warrant publishing them.

However, shortly after Christmas of this year at Professor Whetzel's suggestion, I took up the problem which Mr. Wallace had left, and it is to be hoped that I will be enabled to carry the investigation rapidly ahead until enough facts to warrant publication have been obtained. I have already located what I regard as the causal organisms of the four diseases which I have had under consideration, and am now running an experimental plot at Ithaca in which were planted and inoculated some six or seven hundred bulbs. The facts obtained here should prove conclusively what organisms are responsible for disease and what ones are not. It is always absolutely necessary in any investigation in plant pathology that the organism causing a disease shall be isolated and thoroughly studied, before any really valuable work can be done toward the control of that disease. For this reason, although we have under consideration and are outlining the various lines of work which we wish to carry out toward the discovery of measures which can be used in preventing or eradicating the diseases in the crop, such work is practically all yet before us. We have, however, every reason to believe that with the time at our disposal for the work, and with such hints on control as we have already obtained, we will be able to arrive at the solutions of the various problems.

On American bulbs, we have found four types of disease of quite general distribution and constant occurrence. To these four types, Mr. Wallace has already given the names "hard rot," "dry rot," "soft rot" and "scab."

Although I cannot attempt here to give any very detailed or technical account, it will perhaps be well to give some idea of the differences in the symptoms or appearance of these four diseases. In this way, you may be able to tell which of the diseases are especially injurious on your own bulbs. The first of these, the hard-rot, although not so widely distributed as some of the others, is very destructive where it does occur. In visiting the field in the fall, the first indication of the disease to attract attention is the failure of some plants to reach maturity. Here and there dwarfed plants are observed having a stunted appearance, failing to produce flowers and with the leaves beginning to die or wilt. When one of these sickly plants is uprooted, it becomes evident that the trouble is due to the diseased condition of the mother bulb, which in practically every case will be found very badly rooted or thoroughly disintegrated. During the season of the harvesting of the bulbs, the rot is very evident. In most cases the diseased spots are quite small. In general, the first symptom on the bulb is a very faint, yellowish brown or chocolate discoloratаion in one or several places on the surface. The diseased areas

POINSETTIA PULCHERRIMA.

See Page 345.

CATTLEYA GASKELLIANA AT J. A. CARBONE'S, BERKELEY, CALIF., JULY 24, 1911.

tend to blend gradually into the surrounding tissue. This fact makes it easy to separate this disease from the others in the field with even a superficial examination, because in the other diseases which resemble this one to an extent, the line of demarcation between the diseased spot and the surrounding healthy tissue is very sharp and evident. As this disease progresses in the bulb, the diseased areas assume a watery, active appearance, enlarge, the center takes on a dark brown color, and shrinkage of the bulb begins, causing first depressions and shriveling, then distortion of the bulb, until it finally becomes a dry, very much hardened mass. While the rot is active, the sunken brown area is surrounded by an advancing margin of actively diseased tissue having a lighter, more leaden color. The tissue in advanced stages is very hard, sometimes so hard it can be cut with a knife only with great difficulty. This characteristic is also a good criterion for the recognition of this disease. Our work had proven this malady to be due to the presence of a parasitic fungus in the tissue. The fungus is a very interesting one but we have, as yet, been unable to determine its name. When we isolate it from the bulbs and grow it on various sterilized artificial media, it grows very slowly, only a few mm. in two weeks, and this and other facts make its study difficult. It is coal black in color and is thoroughly unlike any of the other organisms we have studied. Many fungi, as you probably know, which cause diseases of plants, are to be found on the parts above ground, and produce there large numbers of spores which are blown by the wind and infect other plants. The smuts and rusts of our common cereals are well known examples. Moreover, it is upon the shape, color, etc., of these spores that the scientist largely depends in placing and naming the fungus.

Now these fungi which attack the bulbs of the gladiolus since they are underground, and the wind could not scatter their spores, have apparently lost their power of producing them, and the mycelial threads growing through the soil in the field or from bulb to bulb in storage cause new infection. Since we cannot or have not as yet made them produce spores, we cannot classify them and are at a loss for names, but after all this fact is only of secondary importance and means little in a practical way to the grower. If we can prove that the fungi do not produce spores, we will have at least eliminated one possible source of infection, but the fungi may produce spores in nature even though we have failed to get them to do so in the laboratory.

The second disease to be taken up after our description of the hard-rot is the dry-rot. This disease is so widely distributed that I do not believe any shipment of diseased bulbs from this country or Europe has come to us which did not show it on at least some of the bulbs, and I have isolated the fungus causing the disease from many bulbs from a large number of localities. The fungus causing this disease, although totally different from the black fungus just spoken of, also fails to produce spores. The mycelial growth is a profuse, white fluffy one, which in age turns yellow and produces a multitude of minute black resting bodies which we term sclerotia. These serve to tide the fungus over unfavorable conditions of temperature and moisture, through the drouth of summer and the cold of winter. The diseased areas on the bulbs affected with the dry-rot are characterized first of all by a definite margin which is slightly elevated while the center of the spot is depressed. The color in general is a dull chocolate brown. The diseased area is, moreover, usually quite punky in texture, being easily indented with the finger-nail. This lack of the extreme hardness present in the hard-rot spots as well as the possession of a well defined margin is sufficient to separate these two types of rot.

The third type of disease which we call "scab" is so characteristic that only a short description of the diseased areas is necessary. This disease forms usually circular but more rarely somewhat irregularly depressed, saucer-shaped, concave areas on the surface of the bulb. The line of demarcation between the spot and the healthy tissue is so sharp that a distinct sharp ridge is formed around the border of the depression. The surface of the depression is of a very light color, yellow, tinged with reddish brown and with a pronounced metallic lustre. It gives one the impression of a thin metallic film spread neatly over the depression. The tissue beneath

this depression is affected only to a very slight depth, but as the area grows older a cavity forms under the metallic film at the surface becoming very evident upon sectioning a bulb through one of these areas and looking as though the cavity had been eaten out by some insect. As I have not yet completed my experiments with this disease, I cannot say with absolute certainty that it is caused by a fungus, but it seems probable that it is caused by a fungus called fusarium. I have isolated this fungus from the spots but have not yet completed my experiments necessary to prove that it is responsible for the disease, although they are now under way.

The fourth and last type of disease, the soft-rot, is totally unlike any of the other three. While they form hard and, to an extent small, definite, dry areas, this one appears as an extensive rapid softening of the bulb which soon reduces it to a mushy, decaying mass usually alive with mites. The loss of water due to evaporation if the bulb is left in a dry place will, however, soon cause the bulb to dry up and become a brittle, chalky object. This rot probably spreads rapidly in storage, and bulbs diseased with it are so completely destroyed that they will not sprout when planted. This is not usually the case with the other rots. The soft-rot is certainly the most virulent of the four diseases but does not seem to be as common. Our work leads us to believe it to be due to a fungus called penicillium, a nearly related species of which is responsible for the decay of fruits in storage. If this is the case, care in storage will be necessary in combating the disease.

Our work toward the control of these diseases will be directed along those lines which our knowledge of other similar diseases would indicate as most promising of success. In addition, the hints which various growers have given us in answer to our inquiries will prove helpful. Letters sent to growers in all sections of the country, asking for their opinions in reference to controlling the diseases in the bulbs, brought in all cases courteous and helpful answers. I will give you some of these briefly and it must be remembered that these growers doubtless were not all troubled with the same disease so that their remarks must refer to the diseases in general and not to any one in particular.

Twelve growers state that to avoid disease, bulbs should not be planted in soil where diseased ones have previously been grown. Five think that wet, cold soil favors disease. Four attribute it to fresh manure. Three say it came from planting infected stock. Two say that a dry spell during the growing season followed by wet weather favors disease. One says too much nitrogen in the soil or in fertilizers applied causes the bulbs to be soft and susceptible. One notes that if bulbs are left in the soil after the tops die down they rot worse. One states that varieties good for forcing, and which sprout earliest, rot the worst. Two say the storage room should be kept cool and moist. Two say that deep piling in storage favors disease.

As to the correctness of any of these views, I am as yet unable to decide. Carefully planned and successfully executed experiments will be necessary and these will take time and study to complete. It is hoped that the results will be conclusive and if so they will doubtless be of sufficient practical and scientific value to warrant publishing them. Although there is much work yet before us in this investigation, we have accomplished something already and we see no reason why the various problems of control may not be solved if the time for the work and study is applied.

The Evolution of Flowers.

In visiting our present-day floral exhibitions, such as we have recently seen at the Temple, one of the chief things which strike the thoughtful student of Nature is the truly marvelous capacity of flowers to respond to selection, and by such response, in many cases, to become altogether transformed from their original primitive type. It is quite true that there are exceptions to this in the case of plants which by purely natural evolution have become so elaborate and so beautiful as to rival the finest results of human selection, such as the gloriosas, tacsonias, and other grand tropical productions, says the Gardeners' Magazine, but these nowadays are greatly in the minority, and the bulk of the flowers we see owe their brilliancy and splendor almost entirely to man's influence in selective breeding. Even Nature's masterpieces, to which we have alluded, are rarely long under cultivation before variation occurs and novelties are brought forward as rivals for supremacy, and in the large majority of instances the end result of this is that in time the normal falls into the background and its descendants alone monopolize popular attention. Thus it is, for instance, with those wonderful tulips which figured so largely at the Temple. It would have been an instructive lesson could the normal wild flowers from which they have descended been exhibited alongside, such as was done some years ago with the chrysanthemum. In them we should see an uniform tint in each species, instead of an infinite variety ranging from snowy white to the nearest approach to jet black which flowers can be induced to adopt; and it is here that we get a glimpse of the fact that human selection and natural selection are effected on very different lines. Nature has evolved all her floral beauty to one particular end, viz., as an aid to reproduction. Brilliancy of color is primarily due to insect tastes, and, judging by many of the results, those tastes must be fairly æsthetic. Where would a black tulip come in on those lines? Assuming the dark color to have been arrived at progressively, it is clear that the first approaches thereto would have involved a marked dimming of that conspicuous lustre which the natural tulip mostly displays, and that hence any tendency in that direction would have seriously handicapped the reproduction of the strain. Man, however, conceived the notion that a black tulip would be, if not beautiful, at any rate a valuable curio, and hence in the days of the great tulip mania, every approach to that desired end was hailed with delight, greater and greater nigritude rewarded the selector, and finally success was attained so far as an intense purplish black is concerned. But, after all, the popular taste so far agrees with the entomological one that it far and away prefers the brilliant scarlets and yellows and exquisitely feathered and flushed varieties to this swarthy example of misapplied perseverance. Could we imagine Dame Nature accompanying us in lady-like form round the exhibition tents at the Temple we should probably hear numerous drastic criticisms of many of our floral triumphs. The all-important and all-essential aim of seed production is entirely ignored in all the myriads of double flowers we behold. In Nature's eyes they are mere attractive gauds to no effective purpose, and, if handed over to her tender care, would either speedily die out or survive only by reversion to her own original type. The beauty by itself to her is nothing; it must, from Nature's point of view, be a means to an end, and that end the survival of the race. With man's selection, it is true, it is a means to an end, but that end is his own profit or pleasure, not the individual advantage of the plant concerned, and if it bear no seed at all, he is quite content if it can be propagated by cuttings or layers. In point of fact, he has so manipulated many of his triumphs by crossing and hybridizing that even if they bear seed that seed is so fraught with mixed influences that he cannot at all rely on the reproduction of the

HOUSE OF POINSETTIAS.

See Page 345.

GARDENERS' AND FLORISTS' CLUB OF BOSTON AT B. HAMMOND TRACY'S GLADIOLI FARM, WENHAM, MASS.

parental form in its integrity. Nature, however, has been kind enough to encourage these outrages upon her laws by every now and again departing from them herself in the way of spontaneous "sports," which serve as starting points for the selector, and are, indeed, at the bottom of much of the diversity we enjoy. In making these starts man is utterly powerless, all he can do is either to keep his eyes open for natural variation in the wild plants or to sow on a large scale and profit by any break which turns up. Once Nature affords such an opportunity, she is usually liberal in further departures in the progeny, and so progress is made. In the process of hybridizing, however, i. e., the combination of the peculiarities of diverse species or even genera, man is only indebted to Nature's endowment of the plants concerned with the capacity of combining the potencies in the seed cells and contriving some mode of architecture, so to speak, which permits of a new structure on the lines of a compromise, often of great beauty. This we may particularly see in the orchid displays, and also in those of the wonderful tuberous and other begonias, which are really mixtures of three species in many cases, and of two at least in all. It would be an extremely interesting feature of the International Exhibition of next year if, as already suggested, the normal progenitors whose union gave the starting point in these and other cases could be shown side by side with their marvelously diversified progeny, as exemplifications of what human selection can effect in a comparatively short period as contrasted with the results of æons of natural selection.

SAN FRANCISCO, CALIF.—E. Serveau has succeeded to the business of Serveau Bros., formerly of Fillmore street, and is now located at 128 Post street.

A Retailer's View of Recent Introductions

Paper read before the Canadian Horticultural Association by Alfred C. Wilshire, of Montreal, Canada, August 16, 1911.

I can hardly claim to have a very extensive acquaintance with this subject, but if you will allow me to widen it a little and include those flowers and plants which are older, but less common, than the standard kind I will do my best to make it interesting.

There is undoubtedly a tendency in these days with the flower-buying public to search around for something rare. They are getting tired of old standbys and are liable to leave those with whom they are in the habit of dealing regularly in the hope of procuring something their neighbors are not likely to possess. It is well to be prepared for this, and always have something on hand that will catch the eye and awaken their interest. By so doing you not only please regular customers but bring in more of the casual trade.

One of the most interesting and popular plants is the fern. They are used probably more than anything else for house decoration. Of this class the Boston fern, as it is commonly called, is the leader. Many additions to this family have lately been introduced, and all have some merit. They find a ready sale provided they are well grown. The number of varieties is, however, getting a little confusing. If we select four or five of these for commercial purposes at any rate, the rest can be dispensed with. Nephrolepis Bostoniensis holds its own in spite of its competitors, and will continue to be grown extensively. Of its sports there are Harrissii, Whitmani, Giartrasii, Elegantissima Compacta, and Amerpohli. The last being fine for cutting to use in made-up work. Another good fern for the same purpose is Polypodium aureum Mandaii. Adiantum Croweanum is now recognized as the best of the maidenhair for cutting. It is also fine for pot purposes. Cibotium Schiedei belongs to the aristocracy in ferns and makes a grand specimen. I doubt, however, if it will become very popular, it having the serious defect of having a rather unhealthy shade of green, as well as on account of its price. Ficus Pandurata has turned out well and is remarkably hardy for house decoration, and is likely to come into more general use for this purpose.

Considerable experimenting has been done lately with new and little known varieties of azaleas to see if anything can be found superior to the regular sorts forced by florists. Madam Petrick has thus been brought to the front. It has many good points, being of a lovely shade of rose pink, and is easily brought in for Christmas. With us it sold best of any last season. Vervæneana alba is another good Christmas variety, and will likely supersede Deutsche Perle. Firefly for early and Charles Enche for later are now grown extensively. For a table plant nothing could be prettier. They both make the best plants grown on their own roots. Begonia Glory of Cincinnati is a great improvement on Gloire de Lorraine, being of more vigorous growth and a better color. President Taft, on the other hand, is not as good as the old one.

In hardy shrubs we have a fine novelty in Hydrangea Arborescens. It has been tested for two years and proved to be a great acquisition as an Easter forcing plant. It is equally good when grown outside. We have tried a number of Holland grown shrubs with a view to adding to the list of forcing plants for spring. These included magnolias, prunus, wistaria, kalmias, viburnums, deutzias, and daphnes. With the exception of the wistaria they have not proved a great success. If we could get these things

treated as the German grown lilacs they would undoubtedly be better. We have also tried a number of evergreen shrubs and conifers to help out palms, etc., for decorative purposes. A number of these travel well, and when potted up are very useful for this purpose. Aucubas, laurus, euonymus, Irish yews, and junipers are all good. Among herbaceous plants the best things turned out lately is Gypsophila paniculata flore plena. It is a considerable improvement on the old well-known variety, which was considered indispensable for mixing with larger flowers while in season.

Ampelopsis Englemanii after a trial of several years has shown itself perfectly hardy and will probably soon entirely take the place of Veitchii, which cannot be depended upon in our latitude. Several fine things have been added to the rambler roses, the best being Hiawatha, Mrs. Cutbush, Orleans, Tausendschon. Unfortunately they are not perfectly hardy in our own section, but are most useful for forcing purposes. Cyclamen Victoria is a pretty thing with fringed petals of various colors and is a pleasing addition to this beautiful flower.

Phœnix Roebelenii makes a wonderful house plant, and will stand the dry atmosphere better than any other palm, but for some unaccountable reason it does not take with the public. Possibly on account of its drooping habit.

In the bedding plant line there has not been much progress made lately. The new geraniums are little if any better than the older kinds. The limit seems to have been reached. Heliotrope Centifleur is all right, and an improvement on older varieties. Alternanthera Jewel is a good color and fine grown. Celosia Pride of Castle Gould makes a fine thing for pot purposes. Freezia Purity though still a little expensive is well worth the extra price.

Among chrysanthemums some of the best new things of the last year or two are Mrs. W. Wincott, an early pink and fine shade; Donatello, an early yellow with fine substance; Elise Papworth, a splendid white for commercial purposes; Mrs. A. R. Peacock an improved Beatrice May; Mrs. Wm. Arnold, another fine white, with many good points; R. F. Felton, an extra deep yellow of medium size, and White Helen Frick, a good late variety.

In new roses Mrs. Aaron Ward and Melody Sports of Killarney are very good. Since Perle des Jardins ceased to be we have felt badly the need of a good yellow rose. These we think will fill the bill. The former seems to be the better of the two. Rose Queen is superior in color to Killarney and bids fair to become one of the standard kinds. Those who have tried it also say it is a better grower.

Last, but not least, comes the carnation. New varieties of these are constantly cropping up, but many are not strikingly in advance of former kinds. The best that has come under my notice is Mrs. C. W. Ward, a grand deep pink shade, with a fine stem. Alma Ward is a white that is of special merit and is bound to become a favorite with the trade.

NEW LONDON, CONN.—Edward W. Clark sustained considerable damage to his flowers by the storm of August 18.

PEOPLE WE KNOW.

Robert J. Windler.

At the meeting of the St. Louis Florists' Club held August 17 the choice of the members for their president during the coming year fell upon Robert J. Windler, the popular florist at 2300 South Grand avenue. On Wednesday, September 6, Mr. Windler was married to Miss Amy Zender, daughter of Adam Zender, the well-known florist of Chicago. The groom was accompanied by a number of friends from his home city to witness the ceremony and to attend the reception which was held at the residence of the bride's parents, 6638 Ridge avenue, at which there was a large gathering of friends of both of the young people. The happy couple are now on their honeymoon trip and on their return will make their home at St. Louis.

Robert J. Windler.
President-Elect St. Louis Florists' Club.

Raising New Seedling Roses.

One of the most interesting hobbies that the rose amateur can have is the raising of new seedling roses. The author has raised many new roses for his own amusement, states a writer in the Garden, though none, so far, warrants being placed in commerce to compete with those already obtainable. Yet a child of your own is always more acceptable than a superior child of someone else. There are few articles necessary; in fact, common household articles will answer quite well—a small pair of fine scissors; one or two tweezers, such as those used by watchmakers; half-a-dozen small, soft camel-hair brushes of varying sizes; some small tubes of green glass to contain pollen; some very small boxes to receive the pollen until it has lost its humidity; a penknife; a small phial containing a few drops of water sweetened with honey; an ordinary hand magnifying glass; a cheap microscope, if one's interest is sufficient for the few shillings necessary, and one or two small toothpicks.

The mother rose should receive the first consideration. In order to prevent self-pollination the stamens should be removed early before the pollen is ripe. On cutting the filaments (the stems of the stamens) it is always advisable to hold the rose in a drooping position, so as to avoid any pollen falling on the flower. In the case of the center stamens being difficult to remove, first raise them, and then nip them off with the tweezers. In nearly all cases the pollen is not ripe until after the flower is full-blown; but in a few roses the pollen is ripe while the rose is still a bud. Such can be opened for the purpose. In the latter case it is advisable to make sure no pollen grains remain on the stigma (which is in the center of the flower) by closely examining the bloom by means of the pocket lens and removing such pollen very carefully.

The female flower is the one that is to finally bear the heps. It is often necessary to remove some of the petals, so as to make the work of hybridization easier. In such cases do not injure the female organs in any way, otherwise there may be disappointment. When the process is ended it is absolutely necessary to cover the bloom with a small muslin bag to keep bees and other insects from interfering with the flower.

The petals of the male flower, or such as are necessary, should be removed shortly after daybreak; but it is advisable to allow the pollen to remain until midday if it is to be used at once. The pollen is applied to the stigma by simply touching it with the brush charged with the pollen. The brush is charged by simply passing it over the male organs of the pollen parent. If there is a quantity to do, it is more expeditious if the anthers (containing the pollen) of the male rose are cut, thus saving the pollen before actual dehiscence. It is then placed for about twenty-four hours in one of the small boxes, first labeling the box with the name of the rose to which the pollen belongs. By that time the pollen will have lost its humidity, and is then sealed up in one of the small glass tubes. It will thus keep for at least eight days, probably considerably longer. The advantage of thus harvesting the pollen is that, as the flowers do not open at the same time, probably the tree which we have chosen as the seed parent possesses no roses in a fit condition to receive the pollen.

The usual method of sowing the seed is to place the heps in sand during winter and spring, and then to clear the seeds from the rubbish. It is, however, much simpler to leave the heps hanging on the trees until the end of the year, and then beat out the seeds and sow them. The soil should be light and sandy, consisting of friable loam, leaf-mould and thoroughly - decayed manure. The seeds should be sown in pans or boxes in a cold frame or pit, allowing the sun to shine on the pans for an hour or two daily; indeed, the hardier roses can have the pans plunged in an east or west border. March is a very convenient time to sow, and the seeds should be one inch deep. Some will appear in June, but many will take a year, and even two years, to germinate.

When the plants have two or three leaves, they should be carefully raised and transferred to small pots, taking great care not to interfere with the soil in the seed-box more than is absolutely necessary. If grown in a cold greenhouse, they can be shifted as necessary until they reach 7-inch or 9-inch

OUTING OF THE TERRE HAUTE FLORISTS' CLUB AT FOREST PARK, AUGUST 29, 1911.

pots. Some flower the first year; others, again, not until the second year. The flowers at first are usually only semi-double; but if the color is satisfactory, such can be budded in the ordinary way, and will probably make a charming addition to England's flower.

As many seedling roses damp off, it is advisable to take one or two of the most plump buds and bud them on briar. Flowers can then be looked for at a shorter date. In favor of this perhaps the author may be allowed to give one of his actual experiences. He obtained a dwarf Wichuraiana rose, somewhat like a glorified Leonie Lamesch; but owing to the heavy clay soil and the wet winters Bristol enjoys, the plant died. A few budded plants would have prevented this loss.

In the British Isles more success is ensured under glass than in the open. At Lyons the autumns are sunny and dry, and, consequently, the heps ripen better than with us. In any case, it is advisable, unless the reader has glass, to leave the teas, Chinas and noisettes severely alone, and try his hand on the very hardy roses only.

Systematic hybridization can only be effected by being in a position to prove the ancestry of those roses with which we are experimenting. Some roses, such as Killarney, should give way to others, first, because, not knowing the parentage, we are working in the dark and, secondly, because in most seasons it is so terribly subject to mildew. Foreign and Colonial growers take such interest in the crossing of roses that they make no secret of such results.

The Youngster Knew.

Two young employes of a florist in Philadelphia, who are supposed to be variously employed in the rear of the establishment while the boss looks after things in the front, were recently startled by the appearance of the "old man" while they were engrossed in a game of checkers.

The proprietor was justly indignant.. "How is it," he demanded, "that I hardly ever find you fellows at work when I come out here?"

"I know," volunteered one of the youths; "it's on account of those rubber heels you insist on wearing."

OBITUARY.

E. R. Meserve.

The trade in Los Angeles and vicinity was shocked to hear of the rather sudden death of E. R. Meserve of the Los Angeles Flower Market and Signal Hill, Calif. Mr. Meserve was in his usual health up to within a few days of his death and around the store; he complained one day of a cold and went home but pneumonia set in and he died at 4 a. m., August 31. Mr. Meserve was 42 years of age and a native son of California, his father being horticultural commissioner for Los Angeles county. For the last eight years he had grown large quantities of Asparagus plumosus and other greens for Los Angeles market and did a big business in asparagus seed. Last October he in conjunction with Chas Morton formed the Los Angeles Flower Market, with a view to supplying the trade in a wholesale way with all kinds of flowers, greens and sundries and a good business has already been worked up, which will be continued with Mr. Morton in charge as before. Mr. Meserve had a most pleasing personality and, besides his widow and two children, he leaves a host of friends both in and outside of the trade to mourn his loss. The funeral was held on Saturday, September 2, at his home at Signal Hill, and interment was at Long Beach. Large numbers of floral pieces were sent by sorrowing friends and a great many of the trade attended to pay their last respects to one who was greatly liked and respected by all with whom he came in contact. The Los Angeles Flower Market was closed from Thursday until Sunday except for the most pressing business. H. R. R.

William Peck.

William Peck, owner of the Baraboo City Greenhouse, was killed at Grand Marsh, Wis., Saturday, August 26, when he fell from a flat car on a gravel train.

Mr. Peck was born at Ableman, Wis., April 1, forty-four years ago, but has made his home at Baraboo most of his life. He was a conductor on the Chicago & Northwestern Railway for which company he had worked for nineteen years. Mr. Peck was always a great lover of flowers and about seven years ago he built the first of his greenhouses in the city of Baraboo. Since that time he has added to his greenhouse area as increased trade required and materials already on hand would have increased his glass area to 10,000 feet. These he managed while still retaining his position on the railroad. It had been Mr. Peck's intention to quit the railroad and give his whole attention to the greenhouse business in another year when his tragic death ended his plans.

The funeral was held from his home in Baraboo, Monday, August 28. Members of the B. of R. T., O. R. C., and K. of P. lodges attended in a body as well as a host of other friends. There were a great many designs and other floral tributes. He is survived by a wife, to whom he had been married but five months, and three children by a former marriage. K. H. W.

Patrick Maier.

Patrick Maier, a well known grower of Woodville, Pa., died Saturday night, September 2, at the Passavant hospital, of cancer. He had been ailing for some time but his condition became serious and he was removed to the hospital August 19. He made a specialty of growing lilies and other bulbous flowers for the Pittsburg market.

DES MOINES, IA.—The ninth annual meeting of the Society of Iowa Florists was held at the State House August 30, 1911.

HARTFORD, CONN.—At the meeting of the Connecticut Horticultural Society, held August 25, President John F. Huss entertained the members with an account of his trip through the west. His descriptions of Minneapolis, Omaha, Kansas City, Denver and Colorado Springs were greatly enjoyed and a vote of thanks was accorded him upon finishing the interesting account of his travels.

SOUTH BEND, IND.—The prolonged drought and the ravages of the cut worm are responsible for a reduction of about one-third in the peppermint yield of northern Indiana and southern Michigan this year. More than two-thirds of the peppermint oil used in the United States is supplied from this district and owing to the failure of the crop it is expected that the oil will command not less than $5.25 a pound in the near future.

THE AMERICAN FLORIST

1885 TWENTY SIXTH YEAR 1911

Subscription, United States and Mexico, $1.00 a year; Canada, $2.00; Europe and Countries in Postal Union, $2.50. Subscriptions accepted only from those in the trade.

THE fall show of the Horticultural Society of Chicago will be held at the Art Institute, September 21-22, 1911.

THE Gardeners' and Florists' Club of Baltimore at its meeting August 28 subscribed $100 toward defraying the expenses of the Fifth Regiment's visit to Atlanta, Ga. A fitting testimonial for the courtesies extended at the Armory.

Personal.

B. Juerjens of Peoria, Ill., writes from Paris under date of August 21 that the drought in Europe has been extremely severe and everything has suffered. The growers of Holland are supplying Germany and France with vegetables and they can obtain any price they may ask.

THE tarnished plant bug is reported as causing great damage to the dahlias in Connecticut. State Entomologist Britton advises as a remedy spraying with kerosene emulsion or some contact insecticide.

THE booklet entitled "Orders" just issued by the McFarland Publicity Service of Harrisburg, Pa., is a finely printed pamphlet beautifully illustrated and fully explaining the methods employed and results secured by properly placing matter before the public.

THE report of the Board of Commissioners of the Park Department of Boston lately received describes the work being carried on in that beautiful system of parks, especially in the playgrounds, and contains illustrations of the buildings and beauty spots in the parkway.

Horticultural Society of New York.

The schedule of classes and premiums of the Horticultural Society of New York for the exhibition to be held at the Museum building, New York Botanical Garden, September 16-17, is issued and premiums are offered for dahlias of the different classes, asters, hardy chrysanthemums and Michaelmas daisies.

Card From Mrs. Freeman.

Will you kindly allow us through your columns to express our grateful acknowledgment of the kind expressions of sympathy extended us in our great bereavement by the members of the Society of American Florists and the Florists's Club of Washington and thank them for the many beautiful floral offerings?

MRS. JOSEPH R. FREEMAN AND FAMILY.

The Press Committee.

Many florists' clubs and other floral organizations are now making preparations to hold their annual fall flower shows, and a matter that is too often overlooked by those in charge of the arrangements is to have a progressive, wide-awake press committee who will give correct information to the public. A flower show comes directly under the head of amusements, and much of the success or failure will be due to the proper advertising, or, in other words, the attraction of the attention of the public to the merits of the show. Showmen always see that the public is fully informed of all the good qualities of their show through the columns of the public press, and the papers are not only glad, but desire to publish all such information. But, unfortunately at flower shows, the reporter assigned to cover the exhibition meets nobody to instruct him, gropes his way around getting information and misinformation from anybody that he can, with the result that the important features are not noticed and much that is absolutely false is often published through no fault of the writer. This not only discredits the show but also places the whole business in an unfavorable light, and like all advertising when the advertiser makes statements that cannot be backed up, reacts on those who allow such a condition of affairs to exist.

Every show should have a press agent or committee, not of an honorary character, but of workers and "boosters," who will make it their business to see that the papers are fully informed before the show, be on hand when the show is opened, and understand that one of their duties is to escort the reporters around the hall, describe to them the important features and give authentic information. The show that has such a committee can be assured that the efforts of these men will result in a material gain in the box office receipts.

Look Out For This Man.

A swindler has been working in this section of whom we would like to warn your readers that they may be prepared for him. He has evidently worked at the florists' business, as he can talk glibly enough regarding carnations and roses. He has victimized several tradesmen of Madison by the use of small forged checks, claiming a long acquaintance with me and other growers. He is of medium height with dark hair and gains attention by claiming to be an Elk, a member of a Virginia lodge, and florists would be well advised to see the card of any man looking for favors under the plea that he is an Elk. C. H. TOTTY.

Madison, N. J.

[Reports of like nature have been received from other cities, the swindler using the name of a local florist or nurseryman.—ED.]

Coming Exhibitions.

(Secretaries are requested to supply any omissions from this list and to correct any dates that may have been altered since the last advices.)

Chicago, September, 1911.—Exhibitions of annuals, perennials and vegetables, Horticultural Society of Chicago, Art Institute. J. H. Burdett, secretary, 1620 West 104th Place, Chicago.

Cincinnati, O., November 13-18, 1911.—Fall exhibition, Cincinnati Florists' Society, Horticultural Hall-Music Hall. George S. Bartlett, secretary, 131 East Third street, Cincinnati.

Hartford, Conn., November 8-9, 1911.—Chrysanthemum show, Connecticut Horticultural Society, Putnam Phalanx Armory. Geo. W. Smith, secretary, Melrose, Conn.

Hartford, Conn., September 19-20, 1911.—Annual flower show, Connecticut Horticultural Society, Unity Hall. Geo. W. Smith, secretary, Melrose, Conn.

Lenox, Mass., October 25-26, 1911.—Grand fall exhibition, Lenox Horticultural Society, Town Hall. Geo. H. Instone, secretary, Lenox.

New Bedford, Mass., September 14-16, 1911.—Ninth annual fall exhibition, New Bedford Horticultural Society, Odd Fellows Hall. Jeremiah M. Tabor, secretary, 117 Sycamore street, New Bedford.

New Haven, Conn., September 13-14, 1911.—First annual dahlia exhibition, New Haven County Horticultural Society, Harmonie Hall. F. H. Wirtz, secretary, 86 Nicoll street, New Haven, Conn.

New York, September 19-21, 1911.—Dahlia, fruit and vegetable show, American Institute of the City of New York, 19-21 West Forty-fourth street. Wm. A. Eagleson, secretary.

New York, November 3-7, 1911.—Fall exhibition, Horticultural Society of New York, American Museum of Natural History, Central Park West and Seventy-seventh street. Geo. V. Nash, secretary, New York Botanical Garden, Bronx Park, New York.

New York, November 1-3, 1911.—Chrysanthemum Show, American Institute of the City of New York, 19-21 West Forty-fourth street. Wm. A. Eagleson, secretary.

New York, November 3-12, 1911.—American Land and Irrigation Exposition, Madison Square Garden. Gilbert McClurg, general manager, Singer building, New York.

Milwaukee, Wis., November 13-19, 1911.—Fall Flower Show, Milwaukee Florists' Club, Auditorium. Gustav C. Mueller, secretary, 926 Ninth street, Milwaukee.

Springfield, Ill., September 29-October 7, 1911.—Illinois State Fair. J. K. Dickirson, secretary, Springfield.

St. Louis, Mo., November 7-11, 1911.—Fifth fall floral exhibition and pomological display, St. Louis Horticultural Society, Coliseum, Jefferson and Washington avenues. Otto G. Koenig, secretary, 6473 Florissant avenue, St. Louis.

St. Louis, Mo., November 7-11, 1911.—Annual exhibition, Chrysanthemum Society of America, in connection with the St. Louis Horticultural Society.

Stamford, Conn., November 3-4, 1911.—First annual exhibition, Westchester and Fairfield Horticultural Society, Casino. J. B. McArdle, secretary, Merritt building, Greenwich.

Tarrytown, N. Y., October 31-November 2, 1911.—Thirteenth annual exhibition, Tarrytown Horticultural Society, Music hall. E. W. Neubrand, secretary, Tarrytown, N. Y.

Meetings Next Week.

Baltimore, Md., September 11, 8 p. m.—Gardeners' and Florists' Club of Baltimore, Florists' Exchange hall, St. Paul and Franklin streets.

Chicago, September 13.—Gardeners' and Florists' Union, No. 10615, 10 and 12 Clark street.

Cincinnati, O., September 11, 8 p. m.—Cincinnati Florists' Society, Jabez Elliott Flower Market.

Cleveland, O., September 11, 7:30 p. m.—Cleveland Florists' Club, Progress Hall, 2610 Detroit avenue.

La Crosse, Wis., September 12.—La Crosse Gardeners' and Florists' Society, Hotel Stoddard.

Lake Geneva, Wis., September 16, 8 p. m.—Lake Geneva Gardeners' and Foremen's Association, News Building.

Madison, N. J., September 13, 8 p. m.—Morris County Gardeners' and Florists' Society, Masonic hall.

New Orleans, La., September 10, 2 p. m.—Gardeners' Mutual Protective Association, 118 Exchange alley.

New York, September 11, 7:30 p. m.—New York Florists' Club, Grand Opera House building.

New York, September 13, 4:30 p. m.—Horticultural Society of New York, Botanical Garden, Bronx Park.

Omaha, Neb., September 14, 8 p. m.—Omaha Florists' Club, City hall.

Pasadena, Calif., September 15, 8 p. m.—Pasadena Gardeners' Association, Board of Trade rooms, West Colorado street.

Philadelphia, Pa., September 12-14.—Association of American Cemetery Superintendents.

Rochester, N. Y., September 11, 8 p. m.—Rochester Florists' Association, 97 Main street, east.

Scranton, Pa., September 15, 7:30 p. m.—Scranton Florists' Club, Guernsey building.

Springfield, O., September 11.—Springfield Florists' Club, office of the Good & Reese Co.

St. Louis, Mo., September 14, 2 p. m.—St. Louis Florists' Club, Odd Fellows' building, Ninth and Olive streets.

Toledo, O., September 13.—Toledo Florists' Club.

BASSETT & WASHBURN,

Office and Store: 131 N. Wabash Ave., Chicago. Greenhouses: Hinsdale, Illinois.

Chicago.

A MUCH BETTER TRADE.

The market during the last week has taken on a much healthier tone, the stock showing gradual improvement and the demand also showing quite an increase especially in shipping line, the orders being more numerous and larger. A great improvement is to be seen in the quality of the roses which are rapidly taking on the normal condition for this season of the year. American Beauty are now coming in in fine condition with nicely shaped buds of excellent color borne on long, strong stems with the best of foliage, and the demand for the best grade has been very good, the price having taken a slight advance. Killarney and White Killarney are both received in large quantities and of good quality, some of the long-stemmed stock being exceptionally fine. The Mrs. Aaron Ward is being taken up very quickly by the retailers, they all being ready to give this novelty a good trial, and some are making it very prominent in their window displays; most of the stock yet being received is, however, of a short-stemmed grade, but is being well liked by the best trade so many of whom are always on the lookout for something novel in the flower line. Carnations are showing much improvement both in the quality of the stem and the flower, some exceptionally fine Enchantress and White Enchantress being seen upon the counters this week, and the Mrs. T. W. Lawsons and the scarlets are both of good quality. The quantity of these flowers that is being received is increasing rapidly. Lilies are in good supply, especially longiflorums, but the quantity of L. rubrums and L. auratums is on the decrease, there not being many received and these lilies are fast aproaching the end of the season. Asters are of course in good supply and the quality is fine, some exceptionally nice branching varieties of all the different colors can be obtained, but notwithstanding the large quantities that are being received there does not seem to be any glut and the best grade finds a market. There are large shipments of gladiolus coming in, but while there are some that are of first grade, yet there are many that are short stemmed and also many that are of inferior grade. Dahlias are being received in much larger supply and some of the more beautiful varieties are beginning to arrive and they will soon be a feature of the market. Tritomas, or red hot pokers, are now to be had and they will greatly add to the high colors in the window displays, for which they seem to be aptly fitted at this season of the year. Lily of the valley of excellent quality can be obtained but the demand for this flower during the last week has been fully equal to the supply, the market opening Monday with a general shortage, but there will be a good crop in soon, for the fall weddings will create a call for this popular flower for the bridal ceremonies. There are a few cattleyas seen but there is no great quantity to be had, but like the lily of the valley there is no great call. The only chrysanthemum yet to make its appearance is Golden Glow, and there does not seem to be any great demand for them, but those that arrive find a market, although not at a price which flowers of a similar grade will bring when the chrysanthemum season is fully opened. All are now anxiously awaiting the early frosts and the return of the summer vacationists and the advent of regular fall trade.

NOTES.

John Paulus, the North Clark street florist, and wife, are having a most enjoyable outing at their cottage on Pistakee lake. His two sons, Arthur and George, are looking after the store and greenhouses during his absence and take great pleasure in showing the visitors the splendid stock of Boston ferns and poinsettias that they have growing.

John Zech and wife spent August 31 in Milwaukee, where they were the guests of F. H. Holton, the senior member of the firm of Holton & Hunkel. Mr. Holton treated the visitors to a 45-mile ride in his Overland touring car, through the parks and over the boulevards of the beautiful Wisconsin city.

Jack Byers, of the Chicago Carnation Co.'s force, and a number of his friends, made a trip to Saugatuck, Mich., this week to bring back a launch that had been left there on a previous visit.

Vaughan & Sperry received many good shipping orders on Friday, September 1, which helped considerably in cleaning up the large quantity of stock that they were offering.

Miss Amy Forest has returned from her vacation and is again attending to her duties as bookkeeper, at the J. B. Deamud Co.'s store.

Allie Zech and wife have returned from their honeymoon and are making their home at 3630 North Leavitt street.

Fred Klingel, John Kruchten's bookkeeper, is growing mushrooms as a side line, starting out with 300 square feet.

E. L. Gannon, representative for the American Express Co., is back from a most enjoyable visit in New York.

The force at Winterson's seed store is busy mailing the firm's fall catalogue.

George Asmus and wife are back from a most enjoyable visit in the east.

Frank Williams and wife are expected home from Greece this month.

We make these a specialty.
Can supply them all the Year
Once tried you will have no other

Joseph Ziska is still talking of selling the Chicago Rose Co.'s greenhouses, located at Libertyville, and is offering the place for sale at a most reasonable figure. The range, consisting of 60,000 square feet of glass, is well stocked with roses and carnations and all that the buyer need do is to step in and take possession. The plant, located within an hour's ride of the great central market, ought to be a good investment for some one intending to go into business for himself.

Peter Reinberg, alderman of the tenth district, is one of a committee of 250 who will boost the political policies of Wm. Randolph Hearst in this state, under the veil of progressive democracy. It is remembered by many in the trade that it was mainly through Mr. Reinberg's skillful management that Carter H. Harrison was elected mayor of this city in the spring election.

H. E. Philpott returned September 7 from a most enjoyable visit with John Evans and E. G. Hill at Richmond, Ind. Mr. Philpott is leaving nothing undone to make the big meeting in November a grand success, when the local Florists' Club will entertain the St. Louis, Milwaukee, Cincinnati and Detroit Florists' Clubs at the Union restaurant, 72 West Randolph street.

The Athenian Floral Co. have received many thanks and words of praise from friends of the late aviator, St. Croix Johnstone, who unfortunately met his death on the lake front. They designed two pretty monoplanes composed of American Beauties and lily of the valley, they being six feet in length with wings three and one-half feet on either side.

Frank Ayres is again on the job at the Chas. W. McKellar store, having returned from a most enjoyable visit with friends and relatives in Arkansas and Texas. Mr. Ayres stopped off at Little Rock, Ark., to visit his friend, Paul M. Palez, at Vestals, but was disappointed to find the genial proprietor had just left on a business trip to this city.

Growers, Attention

Why not sell your own stock?
We have the finest location in the Chicago market and space enough to accommodate several growers selling their own stock.

PERCY JONES

56 East Randolph St., CHICAGO

A large number of florists attended the Gotch-Hackenschmidt wrestling match at Comiskey base ball park on Labor day, when the "Iowa Farmer" retained his title as champion by defeating the "Russian Lion" in two straight falls.

Miss Olga Tonner will leave next week for a few weeks' visit with relatives at Woodstock, taking a well-earned rest. Her sister, Hertha, has returned from her vacation and resumed management at the store.

It is rumored that Herman Schiller, the popular young florist, will join the ranks of the benedicts in the very near future. Several others in the trade are to follow his example and at least six weddings are expected to take place this fall.

G. W. French, Poehlmann Bros. Co.'s carnation grower, has the carnation houses in excellent shape and the firm is receiving an exceptionally fine grade of blooms that are almost equal to winter-grown stock.

Fred Krause, formerly with the E. F. Winterson Co., writes from the farm that he starts to work at 5 a. m. and finishes at 6 p. m. Better come back, Fred, the hours here are not so long.

Chas. Schafer of Kankakee was seen in the local market this week.

ROSES, VALLEY and CARNATIONS A Specialty.....

WHOLESALE GROWER OF CUT FLOWERS

Aug. Jurgens and family had a very narrow escape from death by suffocation when his greenhouses on Herndon street were partly destroyed by fire late on Wednesday evening, August 30. The family was obliged to flee in their night robes, for dense volumes of smoke were soaring upwards and had already penetrated the living rooms when they awoke and found that the place was on fire. No insurance was carried and it is estimated that the loss will amount to nearly $1,000. The proprietor has postponed his visit to Germany which he and his brother William of Newport, R. I., intended to make September 15, tickets having already been purchased, and is busy making repairs to the greenhouses. Mr. Jurgens is planning on moving the plant from its present location to his property in Mayfair in the spring.

The LaGrange Floral & Seed Store held an exhibit of asters at the store, No. 44 South Fifth avenue, LaGrange, Saturday, September 2. Walter Scott, the enterprising manager, had distributed dodgers through the town inviting all to pay the store a visit and inspect the new asters. All day long the visitors filled the store and kept him busy showing the difference between the older and newer varieties and also the results of different methods of culture. The window was beautifully arranged with asters and also floral work, showing the adaptability of asters in that line. A large, white Crego, of Mr. Scott's own raising, was the centre of attraction. It is a most beautiful full flower of the largest size and the purest white.

A double wedding was held in Des Plaines on Saturday, September 2, when Arthur Blewitt and Miss Grace Schafer, and John Prickett and Miss Emily Blewitt were united in the holy bonds of matrimony. The happy young couples are well known to the trade and Arthur and Emily Blewitt have taken active interest in the business of their father, H. C. Blewitt, and John Prickett is one of the proprietors of the Des Plaines Floral Co. It is understood that Mr. Prickett's partner will soon follow his example and that the wedding bells have only been muffled for a very short time.

The Illinois state fair will be held at Springfield, September 29 to October 7. Liberal premiums are offered in floriculture, of which department Robert O'Dwyer, 714 W. Madison street, Chicago, is superintendent. Copies of the premium list may be had by addressing J. K. Dickirson, Secretary State Board of Agriculture, Springfield.

At the Lake Forest Horse Show there were many finely decorated carriages and carts. The E. Wienhoeber Floral Co. were awarded the first prize for the best decorated pony cart, which was beautifully arranged with gladiolus, aster and other flowers by the head designer, Duncan A. Robertson, and was greatly admired by all the spectators.

The Gardeners' and Florists' Union at a meeting held September 3, adopted resolutions requiring all affiliated unions to order funeral flowers from firms that employ union labor, and to see that hereafter funerals of deceased members are conducted on a strictly union basis, or no death benefits will be paid.

Frank Schramm and family of Arlington Heights returned from a long auto tour of Wisconsin, Illinois and Iowa. The trip was made in his National touring car and not a single accident occurred to mar the long journey of 2,500 miles.

Martha C. Gunterberg has returned from her eastern trip with many stories of thrilling adventures on both land and sea. A fire aboard ship and a hurricane on shore gave the popular young lady more excitement than she expected.

Frank Johnson of the A. L. Randall Co. is back from a successful business trip in Minnsota. Wm. Lorman has returned from a few weeks' vacation in Montague, Mich., and is again in charge of the shipping department.

Bassett & Washburn had an exceedingly busy day September 5, when both the local and shipping trade was brisk. A good grade of American Beauty roses and Golden Glow chryanthemums are leaders at this store this week.

John and Adolph Poehlmann have both received their new Winton touring cars. The latter lost no time in testing his car and when last heard from was making a tour of Wisconsin.

H. Van Gelder, much improved in health, has returned from a most enjoyable visit in Texas, and is again in charge at Percy Jones' making preparations for the fall trade.

Wm. Marks is wearing a smile these days. It's twins—a boy and a girl. The mother and children are all getting along nicely.

Wm. W. Abrahamson, employed in one of the leading florist's stores in Denver, is renewing old acquaintances in this city.

Homer B. Miller, representing the Austin Floral Co. of Austin, Texas, visited Weiland & Risch's greenhouses this week.

Canger & Gormley decorated several pony carts at the Lake Forest horse show and were rewarded by receiving a prize.

George Manos, the Union depot florist, has returned from a most enjoyable visit in the east.

John Loeser of the Peter Reinberg force is back from a two weeks' visit at Fox Lake.

J. A. Budlong had a very busy day on September 5, when the shipping trade was exceptionally good. The store is beginning to take on its fall appearance and the tables are once again laden with large quantities of choice stock, principally roses and carnations. Phil Schupp, the manager, is supplying his customers with a fancy grade of white asters that are of unusually large size and resemble a medium grade chrysanthemum.

The executive committee of the Horticultural Society of Chicago met at the Art Institute, Wednesday, September 6, and arranged the date for the dahlia, perennial and aster show to be held September 21-22, at the Art Institute, Michigan avenue.

Otto W. Frese, manager of the Chicago Flower Growers' Association, says that business has been good this week, and that the shipping trade is increasing.

Joseph L. Raske, of Raske's Flower Shop, arranged the decorations for the banquet at the opening of the new Hotel Planters on Thursday, August 31.

Miss Pearson of the Vaughan & Sperry force is back from a few days' visit in Michigan.

The many friends of Fritz Bahr gathered at his home in Highland Park on September 2, when his mother celebrated her seventieth birthday.

Tim Matchen, store man at Peter Reinberg's, and his wife spent Labor day on the farm.

A. C. Kohlbrand was escorting relatives around the city this week.

HILLSBORO, CALIF. — Miss Jennie Crocker is making preparations to enter the florist business. Henry Maier, who has had charge of the Crocker gardens for years, will be associated with Miss Crocker and take active charge. The flowers raised will be shipped to the San Francisco market.

WIETOR BROS.

162 N. Wabash Ave., CHICAGO.

St. Louis.

TRADE STILL VERY DULL.

The weather the last week has been warm and sultry and has not tended to help trade. A few store decorations, theatre openings and funerals have helped some, but trade is considered as very dull. Stock is very plentiful, especially in the poor grades. School opens this week, as do all the prominent theatres, and it is to be hoped that with the return of the summer vacationists a marked revival in trade will follow.

NOTES.

City Forester Julius Koenig has returned from his tour of inspection, which included Cleveland, Buffalo and Detroit, and reports he was royally received in the several cities. He reports that the nursery in Cleveland is in splendid shape, and at Buffalo much progress is being made by the forestry department in the planting of trees. At Detroit everything was suffering from the drought. Here he found City Forester Hunter was an old St. Louisian and pleased to meet him. Mr. Koenig states that, considering our severe climate, the street trees of this city compare favorably with those of the cities he visited.

Grimm & Gorly had one of the largest store decorations of the season September 2. The opening of Helbrung & Grimin, a house furnishing establishment in the downtown district. Friday night all hands were working, fixing up special designs, orders being received from north, east, south and west. Many other local florists furnished floral pieces.

Twelve thousand and eighty-eight persons attended the fall Sunday opening at Shaw's garden. The great feature was the biblical flower bed, which contained those plants mentioned in the Bible.

Bassett & Washburn, Chicago, have been shipping some American Beauty roses of good color for early in the season, and their blooms show unusual vitality and evidence of careful raising.

Ostertag Bros. had a special decoration at the Cambridge Court cafe for the fall opening. A canopy of wild smilax and flowers was arranged on the side walls at the two entrances.

C. Young & Sons Co. have a fine display of ferns in their windows. They have completed a general renovating and are now ready for fall business.

Frank Windler, of the W. C. Smith Wholesale Floral Co., is taking his vacation and will attend his brother Robert's wedding this week.

W. F.

Luxemburger Bruderbund Schobermesse.

The annual Schobermesse of the Luxemburger Bruderbund was held at Karthauser Grove, Chicago, September 3-4, and drew a large attendance of the growers, florists and gardeners of the north shore, who, with their wives and families, look forward to this autumn festival with much pleasure and anticipation. The exhibit of flowers, fruits and vegetables was very comprehensive and was the center of attraction for the several thousand spectators who were present. A large amount of imported Womeldinger Scholtesberger was consumed while the merry crowd was entertained with songs of the Vaderland and other amusements.

F. A. Benthey, John Zech and A. C. Kohlbrand, Chicago wholesale men, were judges of the flower exhibits and, incidentally, the Wormeldinger Scholtesberger, and performed their duties to the satisfaction of all the exhibitors.

Wietor Bros. were the largest exhibitors and showed some exceptionally fine roses, carnations and asters. Vaughan's Seed Store, Ringler Rose Co., Geo. Wittbold Co., Chas. Schleiff, Nick Reding and Fisher Bros. were also on hand with exhibits and received in addition to their prizes, a large amount of free advertising. N. J. Wietor, who has the interest of the society at heart, was present nearly all the time, seeing that the crowd was well entertained and that all had a most enjoyable time.

Fredericton, N. B.

The flower business the past season has been rather better than usual, funeral work especially being more than in previous years. Carnations are all planted and they as well as the roses and chrysanthemums never looked more promising. Everything outside now looks at its best and it is the hope that frost will not kill the plants down for several weeks, though there is no surety for any tender plant in this climate after September 6. The season as a whole has turned out very well, although it has been hot and dry, yet the grain, fruit and root crops are abundant.

The semi-annual exhibition of live stock and farm and garden produce opens September 16 and as this has always been a successful show will, notwithstanding the heated election, probably be a success this year.

The great question of reciprocity between the two countries is now the prominent issue which will be settled on September 21.

B.

THORSBY, ALA.—Howard Bros. are erecting a new greenhouse 27x100 feet, which will make three that they have devoted to carnations.

Peter Reinberg,

30 E. Randolph St., CHICAGO.

Los Angeles, Calif.

NOTES.

E. McCarrick, Jr., late of Salt Lake City, Utah, has opened a new retail store at 610 South Hill street, under the name of "The Floral Shop." At the opening day, August 23, Mr. McCarrick advertised that he would present all lady visitors with a flower and the store presented a very fine appearance, with good plant and cut flower stock of all kinds well displayed. Although a young man, Mr. McCarrick has had considerable experience in the retail trade, especially with the Huddart Floral Co., of Salt Lake City. There is room for all and everyone wishes him success in his new undertaking.

Morris Goldenson still finds time for sea fishing, and we can answer for the quality of the sea bass he freely distributes. Manager J. Gordon is away on his vacation, and we were glad to see Walter Garbett back at his post, after his serious illness. He looks considerably the worse for wear still, but is feeling much better, and all wish him a speedy recovery.

Good business has been done at the Los Angeles Flower Market and Charlie Morton is more than pleased with the first summer's trade, which, he says, has been away beyond his expectations. Shipping trade to neighboring towns keeps lively, in addition to the city trade. The market now handles the entire cut from several large growers, including that of Charles Brazee, of Wilmington, who has been sending large quantities of Lilium rubrum, album and other speciosum forms.

William Haerle has been busy with the construction of his new greenhouse, which is now practically complete. The roses here are in unusually fine condition for summer, Richmond and My Maryland being especially good. Young benches of Mrs. Aaron Ward are just coming in, and this variety will, apparently, be popular with the retailers. Business has been especially good here right along, and, despite the big glut of cheap stock on the market, the ice box is cleared every day, and often the morning cut has to be waited for to fill orders. Lilium rubrum has been very fine here under lath. H. R. R.

Headquarters for **ORCHIDS** and all Fancy Stock

CHAS. W. McKELLAR,

162 N. Wabash Avenue, CHICAGO.

Wichita, Kans.

About the usual midsummer conditions prevailed during August. The total amount of business done in the retail line was just enough more than last year for the same month to keep the records in good shape and to show the florist that he was holding his own. Following an unprecedentedly dry June was a month of good growing weather, and stocks of asters and other outdoor or summer crops that had been saved through June by the grower's most strenuous efforts responded wonderfully, so that summer stocks have been in most lines ample and of good quality. Three weeks of dry weather in August has necessitated careful attention and much watering. Nevertheless the returns in quantity and quality of stock which have been at the disposal of the retailer have been better than for two previous summers. The condition of outdoor grown stock for fall propagation is in general as good as could be expected. Carnation planting has occupied the center of the stage recently. Most of the planting is finished and weather conditions have been reasonably fair for their starting off well in the houses.

NOTES.

The heavy cut of asters induced Chas. P. Mueller to advertise a special sale for Saturday at 25 cents per dozen. As the other florists were also well stocked and met the price promptly there was no trouble to meet the demand and there still seems to be plenty left.

Bixby & Dugan have bought a 40 h. p. boiler with which they expect to replace an old one of less capacity. They also contemplate changing their heating system from hot water to steam.

Norval Kline, after disposing of his interests in the greenhouses at Lawrence, has taken a position at Hutchinson. W. I. CHITA.

Society of Iowa Florists.

At the ninth annual meeting of the Society of Iowa Florists, held in the room of the State Horticultural Society in the State House at Des Moines, Ia., August 30, Roy F. Wilcox, of Council Bluffs, delivered an address on "Suggestions for Florists' Supplies." Other speakers were William Trillow, Des Moines; William M. Bomberger, Harlan; Henry Field, Shenandoah; G. L. Black, Independence; W. A. Harkett, Dubuque; J. D. T. Fulmer, Des Moines; and Theodore Ewoldt, Davenport, who made addresses on matters important to the trade.

GLUT OF ASTERS.

A very large and steady supply combined with a good but not over large demand served to cause a superfluous amount of stock in the wholesalers' boxes. In fact, the glut is one of the largest the market has ever experienced in late asters. The prices, good for the first part of last week, dwindled down to buyers' prices at the close. Still, considering all, a large amount of stock was moved during the time. Gladioli, too, were in very large supply and quotations upon them decreased. America was, of course, the leader in this flower. The large blooms of this and other varieties sold while many of the smaller ones were jobbed. The number of roses coming into the market is increasing. All are of the best quality. The American Beauties deserve special mention. Carnations are now again a regular factor in the offerings of the wholesalers and while the stems are still short the blooms are as good as those that come in later in the season. Easter lilies are proving good stock. The supply of decorative green is A1 and ample for all calls.

NOTES.

On Saturday, September 9, a new wholesale commission house will open at 24 East Third avenue. The firm name will be Cincinnati Cut Flower Exchange and Alex Ostendarp and A. C. Heckman, Jr., are the proprietors. They intend to handle a full line of cut flowers and supplies. The two men at the head have had several years' experience in local establishments and thoroughly understand their prospective trade. Both are hustlers and should make good from the very start.

The Cost of London Parks.—At a meeting of the London County Council the estimates of the Parks committee for the coming financial year were presented. The total amount required was £165,360, of which £25,000 was for capital amount. The following accounts were allocated for the maintenance of the parks and open spaces—South district, £25,895; South-east district, £32,375; North-west district, £17,480, and North-east, £36,750. A sum of £12,500 was also set apart for bands. The capital estimates of the Parks committee contained provision for a number of proposals not yet specifically approved by the council, the largest items being £3,500 for laying out "The Grange" property at Kilburn, recently acquired by the council, and £1,000 for laying out St. James' recreation ground, Ratcliff. There was also an estimate of £5,000 in respect of the acquisition of "The Grange" property. The estimates on rate account show a decrease of £3,445 in the net expenditure on parks and open places (excluding expenditure on boating) as compared with the estimates for 1910-1911. The operations in respect of parks boating are estimated to result in a surplus balance for the year of £1,310, after paying all working expenses, interest on and repayment of debt and income tax. This surplus, added to the estimated balance of £549 brought forward, makes a total estimated surplus on the parks boating account at the end of March, 1912, of £1,859, of which the Parks committee propose that £1,500 shall be regarded as transferable to the general county account, to be applied in relief of other parks expenditure chargeable to the general county rate, including facilities for recreation. In conjunction with the Parks and Open Spaces committee the Local Government committee submitted an estimate on capital account for the acquisition of Sir Robert Geffery almshouses, in Shoreditch, at a cost of £34,850, towards which contributions of £8,000 will be receivable from other sources.

HEAVY RAINS.

This section of the country has experienced the greatest rainfall ever known in the records of the state. Heat records and wet records have been badly smashed this summer. We hope the cold record will stand with a good margin. Saturday last was about the only day in the week that there was any life in the business. September 1 is usually the closing of the vacation season and the schools open this week, which bring almost all classes home, so with these conditions we may reasonably expect things to be somewhat better. The condition of the market as regards stock is somewhat like last week, with roses showing an improvement in quality. Carnations from young stock have made their appearance. We noticed some from old plants. William Capstick, of Auburndale, was the grower. We were surprised to see that flowers could be cut in such good condition so late. Mr. Capstick lays his success to syringing late in the afternoon. Lilies of all kinds are plentiful and good. Asters that were bedraggled with the rain came up smiling, looking better than ever when the sun began to shine.

NOTES.

The auction sale of stalls in both markets was held Saturday, September 2, and by the way they were bid in money is plentiful in Boston. The phrase, "Be a sport," certainly was lived up to by those who purchased stalls. The prices in most cases were double that of last year. Those who hold shares of stock ought to be able to buy a good Christmas present for their wives. What this city ought to have and what we expect it will come to, is that a large hall be procured or built and a central market be established where all the flowers could be sold. With a half dozen or more markets and wholesalers often stock cannot be procured in the usual place for trading, then there is time lost going the rounds of inspection. All this could be avoided if all the flower interests could be brought under one roof, and we do not think they would fight like Kilkenny cats, either. A better selection could be had, speedier sales would be the rule and all classes in the trade would be benefited.

H. A. Stevens and Salesman Capers both have an extra fine lot of long-stemmed asters.

Salesman Fletcher is handling some nice Golden Glow chrysanthemums for Gustave Olsen.

Wm. R. Nicholson, of Framingham, has started to cut from his carnations.

TRADE IMPROVING.

While the forward movement has not taken place, nevertheless there is a noticeable improvement in flower trade conditions. We are now in the midst of the big annual glut of asters. No matter how fine they are, only a certain amount are sold, the rest go out the rear door. The same can be said of gladioli. American Beauties and other roses, while much more plentiful, are holding their own. Short stemmed carnations are making their appearance and a few dahlias are to be had. Quite a number of cut hydrangeas are seen but local florists do not take to these when anything else is obtainable. Lily of the valley has been unusually scarce with a very strong demand.

NOTES.

Patrick Maier died Saturday midnight at the Passavant Hospital from cancer. Mr. Maier was a very well known grower in this section—his specialty being lilies and other bulbs.

W. Q. Potter, of the McCallum Co., has been on a short excursion among their out-of-town trade. This firm is proud of the special grade of asters they are handling.

Roy Dashbough of the Zieger Co. has secured several swell jobs through his ability to suggest and design things entirely new and original.

L. I. Neff is back from an eastern trip where he has been placing a great many of his door crepes.

Randolph & McClements state they have begun booking orders for a great many fall events.

Karl Klinke has returned from a two weeks' canoeing trip at Lake Chautauqua.

Visitors: J. W. Glenn, Kittanning; C. A. Blankensop, Washington; Jos. Thomas, Greensburg; D. Fuerstenberg of the Florex Gardens, North Wales.

FLORISTS' CLUB MEETING.

The September meeting of the Florists' Club was one of the most interesting in its career. The first topic was the recent convention; this was very well reported and eulogized by John R. Andre for the growers, Geo. C. Watson for the seedsmen, D. T. Connor, the recreation features and Robert Kift for the retailers. Adolph Fahrenwald found much to commend while John Westcott lauded the social features, as did Frederic Hahman. Others spoke of the benefits derived from their attendance and all were impressed with the warmth of the hospitality and brotherly feeling of the craft of Baltimore, so much so that the secretary was directed to send the club's vote of thanks for the great hospitality received at their hands.

Nominations for officers resulted in the following gentlemen being named: J. Otto Thilow, president; John Logan, vice-president; George Craig, treasurer; David Rust, secretary. As there was only one name nominated for each office, those receiving the nomination will be elected to the several offices for the ensuing year at the next meeting. Secretary Rust announced that the next meeting would be the twenty-fifth anniversary of the club and it was at once suggested by Mr. Fahrenwald that this great event be celebrated by a banquet, which was agreed to, and it was also voted to have the ladies present. This gala affair is to be held in the foyer or large hall upstairs immediately after the meeting of the club, on the second Tuesday of October, and will no doubt be one of the most elaborate affairs ever given by the club. A feature of the meeting was a display of dahlia flowers of superb quality; these were exhibited by the Leo Niessen Co., coming from the Peacock Dahlia farms. Dorothy Peacock is a grand flower; a show dahlia of the color of Nymphea, a yellow or orange single and a fringed century were very fine. A box of choice blooms packed for shipment looked very well done. Wm. Tricker of Arlington, N. J., staged a new Vinca minor aurea, a novelty of great merit. K.

Louisville, Ky.

The Elks' aviation meet, on the heels of which followed the Kentucky State Fair, offered the occasion for the Louisville florists to arrange most novel and attractive windows. The city was thronged with sight-seeing visitors coming from all directions and the competition for recognition was strenuous. Enterprising activity was in evidence throughout the retail districts and the florists, although given a good race, easily held their own with beautiful window and store displays. The catchiest and most novel window display was that of C. B. Thompson & Co. A four-foot operating aeroplane decorated in Elks' colors, pulled and tugged at invisible wires appearing at any moment as if it would dart out through the glass, the propeller being revolved rapidly with the aid of electric fans. The ground was a bed of green with white and purple asters forming the letters B. P. O. E. and the back was banked with ferns and palms from which the rays of a small powerful search-light were thrown on the throbbing machine. Many visitors called to compliment Mrs. Thompson upon the work of her window dresser, Miss Nellie B. Able, but Mrs. Thompson is in Michigan at the present on her vacation. P. F. M.

MARKET SHOWS NO CHANGE.

There has been no noticeable change in the cut-flower market the last week. Stock of all kinds is about equal to the demand. Roses are a little short, the crop going off and the cold nights being the main causes. Gladioli and asters are still plentiful. A very good demand for American Beauties the later part of the week was a feature. Florists' supplies for the coming fall and winter are beginning to help swell the sales.

NOTES.

Floral floats were shown in the West Side Industrial parade Friday, September 1, by Wilhelmy Bros., Knoble Bros. and Ohio Floral Co. The local press gave all three considerable mention. These floats were very artistically decorated and showed much ability and skill.

Mrs. Ella Grant Wilson will remove to temporary quarters adjacent to her present location. The store she now occupies will be taken by a large business concern that needs an outlet on Euclid avenue.

F. W. Griffin bought out the store formerly conducted by Smith & Hopkins at 8025 Wade Park avenue, which will make three stores he now controls.

Fred Witthuhn and John Leuschner were expected from their European trip Sunday, September 3.

Many florists are missing the good times at the Florists' Club rooms every Monday evening.

FLORISTS' CLUB OUTING.

The day was as fine as could be desired and Shafer's grove, Stop 34, Schenectady Railway, was an ideal spot for the fifth annual clam bake of the Albany Florists' Club, which was held September 3. The members and their families had gathered to the number of 101 when the bake was opened at 4 p. m. Sports were enjoyed before and after the bake. The day was bright and clear with a fresh wind blowing that made an outing seem like a day in another world. A large measure of the success of the bake was due to the energy of Louis H. Schaefer, chairman of the special committee, and the members under him. Much interest was taken in the ball game between the growers and the retailers. The growers under the leadership of William Newport scoring 10 runs to three for the retailers under the captaincy of J. Connolly.

The games came out as follows: Hop, skip and jump, Julius Eger; hammer throw, Julius Eger; 100 yards running race, boys, A. Kositky; 75 yards, boys, running race, J. McDonald; 25 yards running race, girls, Miss Hanson; 50 yards running race, girls, Miss Simon; spoon and egg race, Miss Schuman; 50 yards running race, men, M. Hanson; potato race, A. Simon; ladies' bowling contest, Miss Kuhn; men's bowling contest, J. J. Connolly; 100 yards running race, William Newport; fat men's race, James H. Snyder; sack race, 30 feet, F. Williams.

NOTES.

The conservation commission, a recently organized portion of the state government, has taken over six large nurseries, formerly conducted by the forest, fish and game commission, containing 15,775,500 trees, and is preparing to sell next spring 11,000,000 trees to re-forest lands which are not well adapted to agriculture. Most of these places are rugged and mountainous, at one time covered with forest growth but are now a menace from the fact that in the spring water from snow and rain flows from their sides like a roof and goes to swell the streams into destructive floods. The commission has just published a bulletin on reforestation which is to be distributed free to citizens to help them in planning and carrying out the work. An exhibition of the trees to be sold will be in charge of an expert forester at the state fair in Syracuse this month. Enquirers will be furnished information also by the forester.

One of the interesting sights in the window of F. A. Danker's store, 42 Maiden Lane, is a specimen plant of Lilium speciosum rubrum containing over 40 stalks with an average of 12 flowers and buds on each stalk. The plant has 500 flowers either in flower or in bud. The remarkable thing to note in connection with the display is that the plant grew from one bulb furnished by Ralph M. Ward & Co., 12 West Broadway, New York, and is one of his famous Horseshoe brand, imported from Japan. The lily attracts attention from its size and the great profusion of blossoms. If Mr. Ward has any more stock like that he will be unable to supply the demand for his bulbs. R. D.

WOBURN, MASS.—The Mishawum Flower Co. is building a large greenhouse on its property on Washington street.

KINGSTON, N. Y.—David Burgevin, of the well known firm of florists, Valentine Burgevin's Sons, is one of the prominent boosters of the city, according to the local press, which briefly sketches the rapid rise of the prosperous firm of which he is the able store manager, and his popularity in his home city.

The Seed Trade.

American Seed Trade Association.

Leonard H. Vaughan, Chicago, President; Marshall H. Duryea, New York, First Vice-President; Edgar Gregory, Marblehead, Mass., Second Vice-President; C. E. Kendel, Cleveland, O., Secretary and Treasurer.

Next annual convention, June, 1912.

CHICAGO.—Prices on the Board of Trade, September 6, for grass seed, were noted as follows: Timothy, $13 to $14.50 per 100 pounds.

THERE are wide differences in timothy strains in regard to rust resistance, the problem of timothy-rust prevention becoming one of breeding.

ALFALFA growers are advised by the Nebraska Agricultural Experiment Station to purchase their seed from the north or the dry lands of the northwest, rather than from the south.

VISITED CHICAGO: James J. Comont, representing James Carter, Dunnett & Beale, London, England; Thos. Madsen, of New York, representing Erhard-Frederiksen & Theodor Jensen Co., Copenhagen, Denmark.

GOOD seed crops of sorghum can be secured with safety only in the less humid regions not infested with midge. The business of growing seed in this region should become profitable.

THE physical condition of soils is changed by growing crimson clover; loose, gritty sand becomes a more compact loam with a greater capacity for moisture; stiff clays become more open and friable, allowing better aeration.

SEED CORN to be first class must be well adapted to the seasonal and soil conditions where it is planted, grown on productive plants of a productive variety, well matured, and preserved from ripening time until planting time in a manner that will retain its full vigor.

The report of the proceedings of the twenty-ninth annual convention of the American Seed Trade Association, held at Marblehead, Mass., June 20-22, is issued and has been mailed to members. A copy of the report of the committee appointed to investigate the legality of the non-warranty clause as printed on seedmen's stationery, is enclosed with the report.

Purity and Germination of Seeds.

The United States Department of Agriculture has published a table showing the percentage of purity and germination of high grade seed of different kinds and recommends that the following percentages be adopted as standards:

Seed.	Purity. Per cent.	Germination. Per cent.
Alfalfa	98	85-90
Asparagus	99	80-85
Barley	99	90-95
Beans	99	90-95
Beet	99	*150
Blue Grass, Canadian	90	45-50
Blue Grass, Kentucky	90	45-50
Brome, awnless	90	75-80
Buckwheat	99	90-95
Cabbage	99	90-95
Carrot	95	80-85
Cauliflower	99	80-85
Celery	98	60-65
Clover, alsike	95	75-80
Clover, crimson	98	85-90
Clover, red	98	85-90
Clover, white	95	75-80
Collard	99	90-95
Corn, field	99	90-95
Corn, sweet	99	85-90
Cotton	99	85-90
Cowpea	99	85-90
Cress	99	85-90
Cucumber	99	85-90
Eggplant	99	75-80
Fescue, meadow	95	85-90
Lettuce	99	85-90
Kafir corn	98	85-90
Melon, musk	99	85-90
Melon, water	99	85-90
Millet, common (Setaria italica)	99	85-90
Millet, hog (Panicum miliaceum)	99	85-90
Millet, pearl	99	85-90
Mustard	99	90-95
Oats	99	90-95
Okra	99	80-85
Onion	99	80-85
Parsley	99	70-75
Parsnip	95	70-75
Peas	99	93-98
Pumpkin	99	85-90
Radish	99	90-95
Rape	99	90-95
Rye	99	90-95
Salsify	98	75-80
Sorghum	98	85-90
Spinach	99	80-85
Spurry	99	85-90
Squash	99	85-90
Timothy	98	85-90
Tomato	98	85-90
Turnip	99	90-95
Tobacco	98	75-80
Wheat	99	90-95

*Each beet fruit, or "ball," is likely to contain from 2 to 7 seeds. One hundred balls should yield at least 150 sprouts.

Terre Haute, Ind.

Business is still very slow with an occasional rush, but taking the season as a whole it has been very good indeed. Outdoor flowers have suffered for the want of rain and the flower beds around town, especially the geraniums, have not done well. The drouth has extended over a period of three months with only two rainstorms. Nearly all of the roses and carnations are planted and fall work has begun. Asters and other flowers which were grown inside are very fine and some from out of town are of extra quality and sell well.

FLORISTS' OUTING.

The first annual outing of the Terre Haute Florists' Club occurred August 29. Sixty-seven florists, their families and employes took a day off and went to Forest Park, seven miles out, and had a most enjoyable time. Everyone carried a basket full and the biggest event of the day was the supper. The appetites asserted themselves in true style and the baskets went home empty. The baseball game between the employers and employes was a big feature. The score was high—33 to 25, in favor of the employes. Pitching horseshoes and other games were indulged in and everyone went home well pleased with the day's sport. The firms who were represented were: John G. Heinl & Son, Terre Haute Rose & Carnation Co., N. B. & C. E. Stover, Cowan Bros., Fred Wunker Co., Henry Graham, Harry Richmond, Otto Heinl, Saenger Bros., and Thomas Stevenson.

NOTES.

Cowan Bros. are putting in cement benches in two houses, which will make four houses now in cement.

Otto Heinl, who has been in business here for the past 20 years, has sold his greenhouses and 14 acres of land to Thos. Stevenson, who took possession August 23. Mr. Stevenson has been with Mr. Heinl for the past ten years as his grower and will carry on a general wholesale and retail business. Otto Heinl has been offered a position as superintendent of a section of fruit land by the Maxwell Land Co. at Hermiston, Oregon, and will leave here in October to take up his new position. He has also purchased land for raising apples.

Fred and Mrs. Heinl and daughter have recently returned from a two weeks' trip to Michigan resorts. Ottawa Beach, Grand Rapids and Paw Paw Lake were visited.

John G. Heinl is president of the Masonic Temple committee which is to built a beautiful temple in the near future to include all of the Masonic bodies.

The Terre Haute Rose & Carnation Co. has everything in and their roses and carnations are looking very fine indeed.

Fred Wunker has been putting in cement walks in his houses. His Boston ferns are beauties. B. S

The Florists' Prediction.

"I am going to start a garden," announced Mr. Subbubs. "A few months from now I won't be kicking about your prices."

"No," said the florist. "You'll be wondering how I can afford to sell flowers so cheap."—Kansas City Journal.

Market Gardeners

Vegetable Growers' Association of America.

B. L. Watts, State College, Pa., President; H. F. Hall, Boston, Mass., Vice-President; S. W. Severance, 508 Walker Building, Louisville, Ky., Secretary; M. L. Rusteuik, Cleveland, O., Treasurer. Annual meeting at Boston, Mass., September 19-22, 1911.

Vegetable Growers' Ass'n of America.

The fourth annual meeting of the Vegetable Growers' Association of America will be held in Boston, Mass., September 19-22, 1911. The convention meetings will be held in Massachusetts Horticultural Hall and the following papers will be read: "The French and English Systems of Vegetable Forcing" (illustrated), David Lumsden, Durham, N. H.; "Marketing" (illustrated), Paul Work, Ithaca, N. Y.; "The Horticultural Organizations of Ontario," J. Lockie Wilson, Toronto, Can.; "Pre-cooling and Storage of Vegetables," Representative of the U. S. Department of Agriculture; "Greenhouse Construction and Heating" (illustrated), W. R. Cobb, Irvington-on-Hudson, N. Y.; "Open Air Opportunities" (illustrated), H. B. Fullerton, Medford, L. I., N. Y.; "Truck Crop Rotation as Practiced by Hotbed Growers of Norfolk, Va.," Burte C. Haines, Norfolk, Va.; "What Experiment Stations Are Doing for Vegetable Growers," C. W. Waid, New Carlisle, O. Other subjects to be discussed are "Irrigation" and "Good Seed for Market Gardeners."

On Wednesday afternoon, September 20, an inspection of market gardens and greenhouses in the vicinity of Boston will be made, and on Thursday evening the banquet will be held. A vegetable show will be held in the halls of the Massachusetts Horticultural Society on Thursday and Friday, September 21-22. The Copley Square hotel has been selected as headquarters. Copies of the programme with railroad rates from different points can be secured by addressing the secretary of the association, S. W. Severance, 508 Walker building, Louisville, Ky.

Wilt or Blight of Potatoes.

Since the first of August there has been a general complaint from the farmers throughout the state of a potato disease which has been described as wilt or blight. The vines stop growing, the leaves roll inward, turn yellow and finally become brown and dry. The vines later undergo similar changes. When the vines are spilt the woody strands which extend lengthwise of the stems and roots are found to be brown or black. Frequently, in the more advanced stages, the whole plant rots off close to the ground, the rotted portion appearing soft, black and hollow, often with small white worms present in the decaying tissue. Neither the soft rot nor the worms are to be regarded as directly responsible for the wilting, since both conditions are the result of secondary invasion along the path of the real cause.

The wilt proper is brought about by a fungus, Fusarium Oxysporum, writes Walter G. Sackett in the News Notes, issued by the Colorado Agricultural College. This fungus enters the plants through the roots, destroying the conducting tissues, and grows into the water tubes of the woody strands, filling them so completely that it is impossible for water from the soil to reach the stems and leaves, and wilting follows.

Where there has been an unusual amount of rain, followed by relatively warm weather, the disease appears to be much worse, owing to the abundant growth of the fungus, which is favored by the wet condition of the soil. This mold, or fungus, is usually introduced into the soil by means of diseased seed potatoes, and when once established, it lives there from year to year on decaying vegetable matter. If the tubers are infected when planted, it frequently happens that the young sprouts are destroyed before they come through the ground; again, the invasion may be delayed or the progress of the disease retarded so that no symptoms of the wilt are apparent until the plants are six to ten inches high, or as in the case this year, until the vines bear half-grown potatoes. The tuber development is seriously interfered with by the disease, and little, if any, growth takes place after the vines wilt. The stem end of the young tubers is usually infected, although no indications of the trouble may be visible at the time of digging. Such tubers develop the well known dry rot in storage, especially if placed in cellars where there is considerable moisture, accompanied by high temperature. The development of the dry rot, which is caused by the same fungus, can be prevented by storing the potatoes in a dry cellar where the temperature can be held between 36 degrees and 40 degrees F. It should be borne in mind, also, that these internally diseased tubers, which are used for seed, are the principal means of spreading the trouble.

While nothing can be done to check the epidemic this season, certain control measures should be taken to prevent its recurrence and spread another year. Spraying has no value as a means of control, since the causal fungus is inside of the plant, and cannot be reached by a fungicide. The dead vines should all be gathered this fall and burned. A three to five year rotation, including some leguminous crop such as alfalfa or peas should be practiced. This is important for two reasons: First to increase the fertility of the soil, and thereby secure more vigorous potato vines which will resist the wilt more effectually; and second, to give the fungus an opportunity to die out. If possible, plant on new land, or on land that has not been in potatoes for at least five years. A very careful examination of the seed should be made in the spring, and only sound tubers used. Seed potatoes which, when cut, show a brown or black ring in the vascular region of the stem end, or which exhibit external signs of dry rot, should be discarded. An excess of irrigating water early in the season should be avoided. The rows should be ridged high and the water kept low in the furrows. By this means the roots are supplied with abundant moisture and the excess is kept from the tuber stems. Late plantings appear to suffer less from the wilt in some localities than the early ones, but this is a point that each district must determine for itself, since the length of the season varies greatly with the altitude.

September Strawberry Plants, The fall is undoubtedly the best time to set Strawberry plants; better by far than spring; these fine rains will start them nicely. WARREN SHINN, Woodbury, N. J.
Remember I am the Celery man.

Celery Plants at $2.00 per 1000, I have some small Celery plants that will do for frames or for the south at the above price: Winter Queen and Golden, self-blanching.

The Nursery Trade

American Association of Nurserymen

J. H. Dayton, Painesville, O., President; W. H. Wyman, North Abington, Mass., Vice-President; John Hall, Rochester, N. Y., Sec'y. Thirty-seventh annual convention to be held at Boston, Mass., 1912.

The Association of American Cemetery Superintendents will hold its annual meeting at Philadelphia, Pa., September 12-14. George M. Painter, 1409 Arch street, Philadelphia, is the chairman of the committee of arrangements.

The Elms at the Arnold Arboretum.

The Arboretum is often asked to determine the names of European elms and for information about these trees, particularly about the so-called English Elms. The subject is complicated for many varieties and several hybrids of these trees have been developed through long cultivation, and it is sometimes difficult to distinguish hybrids or forms due to cultivation from the original wild types of these trees. This difficulty is increased by the nearly complete destruction of the original forests of western Europe where of most species of trees only planted individuals can now be seen, and the wild types of the European trees must be looked for in the Balkan states or in the Caucasus.

There are in all Europe four species of elm trees that can be readily distinguished. The confusion in regard to these trees goes back at least to the time of Linnæus who considered that all the European elms belonged to one species to which he gave the name of campestris. This name, however, cannot be used for any one of the four species united by Linnæus as it is impossible to know which of the four he considered best deserving of the name. Ulmus campestris, therefore, as a name must be given up. This is unfortunate for the name is of old usage and is found in all books about trees.

Two elm trees grow naturally and spontaneously in Great Britain, Ulmus glabra and Ulmus nitens, and these names, which are the oldest which have been applied to these trees, further complicate the situation. Ulmus glabra, which is often called the Scotch Elm, is a medium-sized, round-headed tree with stout hairy branchlets and large short-stalked leaves often three-lobed at the apex, and very rough, especially on the upper side, from the short rigid hairs which cover them. This tree can easily be distinguished also by the fruit in which the seed is in the center of the surrounding wing. It is a native of Scotland and northern England, and extends eastward to the Caucasus, eastern Siberia and Japan, where it is represented by a distinct form, the variety heterophylla. To the Scotch Elm several names have been given. The oldest and the one therefore which should be adopted is Ulmus glabra. This is an unfortunate name for the leaves are rougher than those of any other elm tree, and Ulmus scabra and Ulmus montana which were given to it later are more appropriate names. The name glabra, however, as the author who first used it states, was given to this tree because the branches are smooth, that is because they do not produce the corky wings which are developed on the branches of many varieties of elm trees.

The Scotch Elm has been sometimes planted in the eastern United States but it is not a desirable tree. It does not produce suckers like many other Old World elms, but it bears great quantities of seeds which are freely blown about and, growing rapidly, produce innumerable plants which may become troublesome weeds. In recent years, in the neighborhood of Boston, the leaves of this tree have been destroyed in early summer by the larvæ of a leaf-mining insect which works entirely under the epidermis of the leaf and cannot, therefore, be reached by an external application of poison. This insect is a good botanist and, selecting always this elm, never feeds on any of the other species. Several varieties of the Scotch Elm are commonly cultivated. The best known, perhaps, is the Camperdown Elm, the variety Camperdownii. This is the tree with pendulous branches which is often planted in suburban gardens where, as the branches grow regularly round the top of the stem and reach the ground, it makes a natural arbor. The variety horizontalis with irregularly spreading and more or less drooping branches is a handsomer tree but is less often seen in the United States. The Exeter Elm is a variety of this tree, var. stricta, with erect branches which form a narrow pyramidal head and is more curious than ornamental. The variety macrophylla is a form with exceptionally large leaves, and the variety myrtifolia has purplish leaves. The variety superba, which is perhaps a hybrid, is a large tree with a broad head of pendulous branches, and large, rather lustrous leaves, and is the handsomest of all the forms of the Scotch Elm.

The second species which grows in Great Britain, Ulmus nitens, is a taller tree with slender hairless branches sometimes furnished with corky wings, longer-stalked and smaller, smooth, shining leaves without hairs except occasionally on the under surface of the midribs, and fruit in which the seed is near the upper edge of the encircling wing. This tree produces suckers freely. It is a widely distributed tree, extending to the Caucasus and Siberia. It is not often found in American collections and it is hardly recognized by American cultivators of trees. There are several forms of this tree in cultivation. Perhaps the one most often seen is the variety in which the leaves are blotched with white, variety variegata, also called argenteo variegata. The Cornish Elm, with erect growing branches forming a narrow irregular head, is a variety of this tree. There is a variety with purple leaves, var. purpurea, sometimes called var. corylifolia purpurea; and there is an interesting form found a few years ago in Persia, the variety umbraculifera, with short branches forming a compact nearly globose head.

The third European species, Ulmus laevis, is found only in the northern part of the continent and is the commonest elm of Scandinavia and northern Russia. This is a noble tree which sometimes grows to the height of one hundred feet, and is hardly distinguishable in habit and foliage from the American Elm although quite different from our tree in the long stems on which the flowers and fruit hang. Like the American Elm, the trunk and large branches are often clothed with small pendulous branches. This tree is probably extremely rare in American collections, although it might well be more often planted in the northern states. It is often called Ulmus pedunculata and Ulmus effusa.

The fourth European species merged by Linnæus in his Ulmus campestris is a tree from central and northern Europe for which the oldest name is probably Ulmus foliacea. This is a tall tree with slender branches often developing corky wings, small, smooth or rough leaves, and fruit in which the seed is near the middle of the wing or between the middle and the apex. This tree is not generally recognized in American collections, but it is usually Ulmus foliacea which comes to this country when seedling elms, under the name of Ulmus campestris, are imported from French or German nurseries. The curious, dwarfed, small-leaved elm called Ulmus viminalis is evidently a seedling variety of this species.

NEW YORK.—Suhrer & Gray have leased the store 31 East One Hundred and Twenty-Fifth street to carry on a florists' business.

WESTBORO, MASS.—The two new greenhouses of L. C. Midgeley are nearing completion and will be devoted to the cultivation of carnations.

Heacock's Palms and Ferns

Home Grown, Strong, Clean and Well Established Describes our palms. No more words are necessary. "Our satisfied customers are our best advertisement." One customer who has been dealing with us for years sent us an order for $1,500 worth of palms without seeing them. Another whose order last year amounted to $700, gave us an order this year amounting to $1600. Send for our new booklet and give us a **trial order.** Lay in your stock of palms in **September** while you can have them shipped **by freight.** Our facilities for shipping are of the best. We ship by freight to every state in the **Union.** We have 40 per cent more glass this year; most of our glass is devoted to palms. We are particularly strong in the **larger sizes, (7, 9 and 12-in.)** We grow all our Kentias, above 6-in. sizes, in **cedar tubs** made especially for us, **avoiding breakage of pots** in shipments and **giving better satisfaction to our customers;** and while they cost us several times what pots would cost, we sell them for the same money; they are the neatest, lightest and best tub ever introduced painted green, with three electric welded wire hoops. We order these tubs by the carload.

Order Now for Fall Delivery. **When in Philadelphia, call and see our stock before placing your order. 20 minutes ride by rail; 50 trains each way every week day; Railway Station Jenkintown.**

The American Florist Co.
440 S. Dearbo. St., CHICAGO.

Piping Greenhouses.

ED. AMERICAN FLORIST:

We have two connecting houses 30x150 feet and 28x150 feet, respecively, with glass gables, 14 feet to the ridge, short span to the north. The south wall has 36 inches glass and two feet concrete; the north wall seven feet high, double boarded, lined with building paper; the middle gutter on seven foot posts. The larger house is to be devoted to roses and the other to carnations. We intend to install a steam boiler having 40 3-inch tubes using gravity system, and piping with 1¼-inch pipe so that it can be used as a hot water system in mild weather. The temperature outside is seldom below zero. What would be the best arrangement of pipes? What size chimney will be necessary? Where should the boiler room be located? Will cheese cloth answer for the partition between houses? What is the best manner of getting the ashes out?

Utah. O. N. L.

If hot water is to be used for heating in mild weather it will be necessary to have the flow pipes of greater capacity than when used as a steam-heating system. While one 2½-inch flow would answer in the latter case it will be necessary to put in three for a combination system. In addition to the flows nine 1¼-inch returns will be needed in the rose house. For the carnation house two 2½-inch flows and eight 1¼-inch returns will furnish 50 degrees in zero weather with steam heat, and will answer in mild weather with hot water. All of the returns can be on the side walls in the carnation house, but with three flows in the rose house it will be better to have three of the returns under one of the benches in the rose house. In order to secure a free circulation through 1¼ inch pipes for hot water. It will also be necessary to run the flow pipes overhead in both houses.

Cheesecloth or waterproof paper could be used for the partition. If conditions are favorable the boiler could be at the east end of the houses. While lifts of various kinds are used for taking out ashes, in a range of the size described they can be readily carried out. L. R. T.

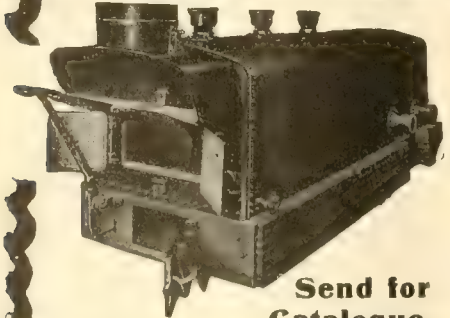
Andersen Specialty Co 4648 Calumet Ave., CHICAGO.

What the Users say



Better and Cheaper Than Any Other System

ZANESVILLE, OHIO, Feb. 11, 1911.

Gentlemen:—

In regard to the Kroeschell Threaded Tube Piping System, I think it is better than standard piping system, not only in being cheaper, but thinner and giving more heat. I ound the Generator was a paying proposition and would recommend its use to all using a hot water system. My No. 11 Boiler does the work satisfactorily on over 25,000 sq. ft. of glass

Very truly yours, C. L. HUMPHREY.

Send for Catalogue.

Chiffons. For prices see advertisement elsewhere in this issue. Geo. H. Angermueller, 1324 Pine St., St. Louis, Mo.

Trouble Talk No 4

Second Series

Sort of an Animal Talk—It Being Mainly About Boilers—the Half Horse, Half Alligator Kinds.

The office boy drew the alligator. The boiler I did myself with a quill pen.

WHEN you were a boy and played hookey from school those first warm spring days did you and the gang make a raft over on the old frog pond down by the big willows? (If you didn't you have never been a real boy.) After a while that old raft got so water logged it was half under water and it was a good stiff job to push it about, even with the longest bean-pole "borrowed" from Deacon Sly s garden.

Well, sir, that very raft, or the memory of it, got me an order one day last winter. It came about like this: The Boss sent me out to Pittsburg to look over a heating system that the owner said "didn't do the work." It wasn't one of our jobs, and when any of us are called in to look over another fellow's work, we have to be kind of careful, for no matter what you say, the owner is apt to think you are knocking. So (this is in confidence) I generally first go over the things I know to be about right and make a point of praising them. Then I gradually lead up to the things that are wrong, and show up just why they are wrong. Ten chances to one, by that time the owner sees that I know my business and takes any of my criticisms more kindly.

So, after going carefully over this Pittsburger's piping, we landed in the boiler cellar, and it didn't take me long to locate the trouble. The job was steam. The boiler was one of those half horse, half alligator affairs that is neither a steam boiler nor a water boiler. The kind of boiler that can be used for either, but for either it's not much use.

The thing didn't have steam space enough—the steam was water-logged, didn t have the heat in it. Now, everyone knows that it's **dry, hot steam** that economically does the work Dry steam is what every power plant engineer insists on having. It takes an ample sized steam space to get dry steam In order to cut down the expense of manufacturing, most of the boiler concerns make one boiler do for both steam and water. As a result, there is too little space for the steam to expand in at the top of the boiler, when used for steam, and when used for water, too large a volume of water to heat and move rapidly.

The steam you get is lifeless.

The water you get is sluggish, and always requires forcing of boiler to move it satisfactorily.

Well, sir, when I told that man the steam he was getting was water-logged just like the raft of our kid days, he saw the point at once. Saw plainly that he had bought a mongrel boiler.

Before I came away my order book read, "Connect up present A. B. Co.'s boiler for sulphuring use only. Ship at once one of Hitchings & Co.'s 8-section No.36 cast iron steam boilers for heating."

Next time you are tempted to buy a boiler that's a little cheaper than ours, just ask the salesman the difference in height between their water and steam boiler. Then compare ours and prove to yourself who is giving you your money's worth.

There is 6⅜ inches difference in height between our No.36 water and steam boiler. That difference is what makes the ample sized steam space, without which you cannot get dry, hot, lively steam.

If you have a suspicion that yours is a half horse, half alligator boiler—send for me. If you haven't, send for me anyway. In either case I can save you money. Address your letter as usual to

The Trouble Man

Hitchings & Co., Elizabeth, N. J.

Next Week's Talk Has to Do with the Difference Between Grate Surface and Fire Surface, and How Some Get Fooled.

This does not apply to you; therefore the sketch will show up some facts plainly and pointedly.

Wm. Turner, Fruit Expert, Adds His Good Word for
The Burnham

"Having given your new 'Burnham' Boiler, No. 936, a fair trial, I can say it's the best gardeners' friend that has ever been put on the market. It gets right down to business as soon as the fire is started. The old boilers are a back issue compared to the 'Burnham'—I may say, very far back. I am in hopes ere long of having a full battery of the 'Burnham' Boilers in place of the others, and am convinced we would soon save the difference in fuel." Yours respectfully,

Mr. Turner is Superintendent for M. C. D. Borden, Oceanic, N. J.

This is the U-Bar the bar that makes U-Bar Greenhouses the Famous Greenhouses They Are.

At a glance that's apparent. The reason is, the U-Bar. To put it another way; you can put a gold plated harness on a heavy draft horse and hitch him to a swell little runabout—but with all his trappings he ambles along draft horse fashion just the same. So by the same token, putting a curved eave on a greenhouse does not make it a U-Bar curved eave house. It only looks something like it from the outside. A U-Bar house is distinctly different and it's the U-Bar that makes it so. Send for a catalog and find out **just** why.

FLORIST'S SUPPLIES.

We Manufacture all Our *Metal Designs, Baskets, Wire Work, and Novelties,* and are dealers in *Glassware, Pottery, Decorative Greens* and all *Florists' Requisites.*

And this is That Snug Little House on Mrs. C. A. Armstrong's Grounds at Greenwich, Conn., Alexander Shaw is the Gardener.

YES, it is right handy by the residence—not more than 100 feet from it. And say what you will, that's the way it should be, when conditions make it possible. What's the use of having an inside garden way off out of reach? You don't locate the outdoors flower garden that way.

We come out strong on this nearby locating opinion, because we believe that it is not only an advantage to the owner, but a decided one to the gardener.

It's only plain common sense that your employer will keep up a stronger interest in you and what you are doing if it is but a step to run in and look through the house. The more interesting you make it for him, the more interested he will be in you; the more valuable you become, and the surer are your chances for advance and the securing of more houses. (Read that again). And it's every gardener's ambition to secure both.

When it comes to making such additions you will particularly need our services. Need them because a house located near the residence requires careful designing and planning, else it will be a botch affair. It is surprising, for example, what an attractively designed hood entrance will do to set a plain house off, if it be rightly placed and consistently handled.

But these and the hundred and one other things that go to make up a successful greenhouse can't be secured from builders with but a few years' experience. You know that well enough. You also know that when you tell your gardener friends that yours is "a Lord & Burnham house," **it means something.**

It means you have the very best house money can buy. If this were not so, then why do the new concerns so often refer to their houses as "just as good as any L. & B. house?"

Ever think of that side of it before? It simply means, our constructions are the standard constructions now, just as they have always been for half a century and more.

Send for the catalog (that new 100 pages in colors). It's a conclusive bit of evidence. We will send one to your employer if you say so.

SUGGESTIONS FOR PLANT GROWERS.

Peonies.

Now is the best time to move or divide peony roots. Plants that have been in one location for a number of years will grow too thick and will not produce either so many or so good flowers as younger plants, although the peony does not produce the best quality flowers the year after transplanting. The ground in which peonies are to be planted should be well enriched and deeply spaded in preparing it for the young plants. In digging the plants, dig all around the plants and then carefully insert the spade underneath and lift the plant, taking pains that the large roots are not broken. For these pieces of root if left in the soil sometimes start new growths and if other varieties are later planted in the ground, cause a mixture. The roots can be cut up into quite small pieces, but it is better to leave three strong eyes to each piece and not divide into too small plants. Set the plant good and deep and firm and if the ground is dry, give it a good watering.

Decorative Plants.

The return of the customers from their country and seaside summer homes will create an immediate demand for palms, ferns and other decorative stock and the retailer or grower who has not already prepared himself should do so at once. Plants can be purchased at this time and shipped safely and in order to save expense they should be purchased at once before colder weather sets in, for they can be transported by freight now and after freezing weather it will be necessary that they be forwarded by express and the difference in the charges of these two methods is considerable, adding materially to the the cost of the plant shipped by express. A fine assortment of palms is a necessity at this season and should be obtained at once in the saleable sizes as befits the trade. Kentias and arecas from two to four feet high can be bought from $1.00 to $5.00 each and are the sizes more in demand than either smaller or larger sizes. Phoenix Roebellenii is a very decorative palm and in the smaller sizes finds a good sale, but the larger sizes are still quite expensive and can be handled only by the high-class trade. Ferns of the nephrolepis family and dracaenas will be in demand, in fact a full line of good decorative stock is a necessity at this time in any up-to-date establishment having a retail trade. The stock on hand should now be in active growth and should not receive any check. It is well to be prepared to give these plants a little fire heat as soon as the nights become so cool that the temperature in the houses drops much below 60 degrees.

Tulips and Narcissi.

The tulip and narcissus bulbs should be placed in the pans and boxes as soon as possible after their receipt. It does them no good to leave them lying around, and it is far better to get them in the soil as early as possible. Much of the trouble in blooming these bulbs is laid to the tardy treatment of the growers by the bulb merchants of Holland and in case of failure they are quick to use this as an argument as the cause. If the bulbs are planted early they will at once start to make roots and the forcing of them is then a comparatively easy matter. Have the flats all ready, as has been written of Paper White narcissus of convenient size. Any old rose or carnation soil is good enough, but if it binds too closely, mix in a generous quantity of sand. Set the bulbs close together and pack the soil firmly around them. Have a place prepared outside and set the flats on strips of boards and water thoroughly. It is not advisable to depend upon a rain, but unless the fall is exceedingly dry they will not need further watering. Cover the pots and boxes with about three inches of soil, over which throw some old straw or litter to prevent too rapid evaporation. Here they can remain until freezing weather sets in, when if there is a dark, cold cellar, those that are to be forced during the winter can be moved into these quarters, while those that are to be bloomed in the spring can be more heavily covered and be easily handled after the warmer days of spring arrive. If there is no suitable cellar they can be wintered outside,

but it would be better to build a frame around them and cover with shutters for it is a very disagreeable job shovelling off the snow and frozen covering during the cold winter days. Where they are to remain outside it is better to plan about how many are to be brought in each week, and place them together so that it will not be necessary to open up too many places, but have the different varieties that are to be taken out successively placed after each other and together, and much of the hard, cold work can be dispensed with.

Geraniums.

All the cuttings that can be taken should be secured now, for a frost that will cut everything down may soon be expected in the northern part of the country at least. In making the cutting all the large leaves should be removed, leaving only the smaller leaves and the top. The most economical way to propagate these fall cuttings is to insert the cuttings in 2½-inch pots filled with sifted soil, into which a liberal amount of sand has been mixed. After the cuttings have been placed in the pot they should be given a good watering and placed on shelves preferably near the glass, and shaded with papers for a couple of weeks. The papers will prevent too rapid evaporation and consequently continual watering, which will cause the stem to rot if the cuttings are kept too wet. It is much better not to wet the cuttings, after the first watering, until they show signs of wilting. A sprinkling of the foliage in the morning will carry the plants along for some time before watering the pots will be required. If cuttings enough cannot be secured the plants should be lifted and potted that a good supply of cuttings may be secured early in the winter.

Care of Palms.

Very few are willing to let the palm grow as it will, gathering its old and faded leaves about its own trunk, and although dry and apparently useless they "hang on" forever (?). In very many cases I think the old leaves add a great deal to the dignity of the palm, but if trimmed off the base of the palm leaf should not be cut too close to the trunk.

At Honolulu, writes a correspondent in the California Garden, the air is so filled with the minute spores of ferns that it settles like dust everywhere and the result is that the rough trunks of all the palms are veritable ferneries. All sorts and kinds are growing in the axels of the old palm leaf and soil gathers to some extent, helping to make the best of material for the growth of young ferns. Here we can with very little care ornament the trunks of the large date palm with several varieties of ferns, kenilworth ivy, sedums in variety, lycopodium, asparagus, sprengerii, the strawberry geranium and many a dainty growing plant that has few roots and loves shade and moisture. As the date palm becomes twenty years old about the base an accumulation of surface roots are not pleasing and this can be improved with a circular bed of begonias or ferns or both together—built up from six inches to eighteen inches above the ground as conditions require. Rough rock or even cobbles serve to hold up the bed and look well with the plants. Several varieties of orchids would grow in just such a location if the watering could be properly managed.

THE RETAIL TRADE

Conducted by Robt. Kift, Philadelphia, Pa.

Summer Flowers in the Chicago Stores.

The fall season will soon open and the retail stores are ready for the return of their customers from their summer homes and vacations and the advent of the fall flowers and are looking forward to a good, prosperous season. The summer just passed has been a very quiet one with most of the dealers, especially those that are situated in the residential parts of the city, but the down-town stores have all had a fairly busy season, transient trade especially being good. The summer has been an exceptional one in many ways, principally caused by the vagaries of the weather. Early June was exceedingly hot, and this was followed by a long, dry period, which resulted in the flowers being of poor quality and later becoming quite scarce, and the early hot spell also caused a hurried departure to the cooler summer homes of those who were fortunate enough to possess them. But during the later summer the weather has been more propitious and the flowers have been of excellent quality. A little resume of the flowers used during the last summer may be apropos at this time.

Of all the different flowers used during this summer the gladiolus seems to have shown the greatest improvement of any over previous years. The spikes of America, Mrs. Francis King and Niagara have been grand, and some of the newer varieties seen in limited quantities have been very beautiful and were valuable additions to the florists' stock in trade and have also been made use of in decorative and other floral work. Lilium Giganteum has been the mainstay for large flowers for funeral work, and the quality of the flowers has been superb, and while at times the supply has been slightly in excess of the demand, yet there has been a good call and the prices have held well. Lilium speciosum and L. auratum have been in constant supply and of good quality and have been made use of to a great extent in all kinds of work. Lily of the valley has been of excellent quality all the summer, in fact, much better than has been the product of other years.

The supply of roses has been bountiful throughout the summer, but the quality has varied greatly. The early hot days took all the life out of the plants and flowers and the quality was poor, but during the latter part of the summer the stock improved rapidly and was as fine as could be desired. Carnations have not been much in evidence all summer. The plants never recovered from the severe heat from which they suffered during June and the quality of the blooms has been poor throughout the season. Sweet peas also were poor in quality and never were in as good condition or supply as in other years. Orchids were in fine quality and more plentiful early in the summer, but as usual have been in short supply during most of the season. Water lilies of the several colors have been a great feature with many of the stores and have been much employed in window displays and funeral work. They have been shown in the windows with tanks representing ponds and with woodland scenes with running water, having a most cooling effect upon the heated travelers of the hot pavements. The early asters were poor, but the later varieties have been magnificent and in large quantities, and have been used in all classes of work, and a great mainstay.

Of other stock there have been a good supply, but owing to the season not of extra quality, and there has been nothing novel that attracted much attention. The poeny season did not extend to its usual length. The excessive heat during their blooming period forced them into bloom faster than they could be picked and cared for, and there was not the amount placed in cold storage that has been the custom in previous years, but while they lasted they made a great showing and were much employed. There has been a great assortment of the coarser, outside flowers, but except for window display and cheap work there has not been any great demand for this kind of stock. Taking it all in all there has been nothing in the shape of novelties or new flowers during the summer of 1911 to attract particular attention.

SPRAY OF ANTIRRHINUM.

A GOOD HOUSE OF LILIES.

THE LILY.

Growing Lilies.

The bulbs of the different varieties of Lilium longiflorum will soon be arriving, and, in fact, at the present day with cold storage bulbs they are always with us, but the season is fast approaching for getting the bulbs started for winter and Easter. One of the large growers has stated that "I do not suppose that there is anything grown for Easter that is more uncertain and requiring a greater amount of skill and attention than the lily, especially the growing of good lilies for Easter." But yet with all the difficulty and uncertainty these growers year after year produce a fine grade of plants timed to a nicety.

There are four varieties of lilies ordinarily forced by the florists during the winter, Lilium Harrisii, which was for years the main standby for early blooms, but unfortunately this became badly diseased and healthy stock was almost impossible to obtain, but the last few years have seen great improvement in this regard. Still the storing of other lilies in cold storage has made it possible to have lilies during the fall and holidays without depending upon L. Harrisii and it consequently is not in such favor as it was years ago. Lilium multiflorum is forced in large quantities for Easter blooming. The bulbs come mostly from Japan and it produces a plant of the best height for retail trade with good sized flowers and with three and more flowers to the plant. But this variety has also been afflicted with a disease and the bulbs often arrive so late that heavy forcing is required to have them in bloom for Easter. The loss from disease has been large, in some cases reaching as high as 60 per cent. Lilium Formosum is a good lily with handsome foliage and makes an elegant pot plant, but cannot be depended upon to come in regularly and varies greatly in height, some showing bud very early and when only a few inches high and others growing very tall before setting the buds. L. giganteum is the lily that is most largely grown, not only for Easter, but is used almost exclusively for cold storage, and is the variety most depended upon for florists' use. The plant is generally of good health, showing but little disease, grows of good height and generally quite even and bears a good head of large flowers.

The Japanese bulbs arrive in November and as soon as received should be started on their culture, for the time is none too long to get them in bloom for Easter. The grower has two methods before him for the potting of the bulbs and both have their advocates and both bring good results, but the choice will depend greatly upon the amount of room and help at his disposal. Some pot the bulbs immediately into their blooming pots, 6-inch, and others pot them into 4-inch pots. The grower of chrysanthemums will have plenty of room for his lilies early enough to plant them by the former methods, but the grower of Christmas stock will be cramped for room until after that is disposed of and, consequently, pots his lilies in the smaller size. Another argument advanced for the small pots is that the lily has to be moved at least three times before the first of the year, and a man can handle three times as many 4-inch pots as 6-inch pots in moving them, and if they have to be carried any distance the saving of labor will be considerable.

Whichever way the grower decides upon to grow his bulbs the culture is the same except that when the plants are brought into heat the beginning of the year the 4-inch plants are potted in 6-inch pots at that time. The bulbs are placed in the pots just below the surface of the soil. After potting they are placed outside, preferably in a cold frame, and buried either in soil or ashes. Before covering they are given a good watering and here they remain until the roots have started sufficiently to place them in the houses, which is generally early in December in the northern part of the country, when they should be moved

away from all danger of frost into a cool house. Here they can remain until they are carried in the warm house in which they are to be bloomed. This will depend considerably upon the date of Easter, which occurs from March 23 to April 25, according to the phases of the moon. Careful watering is a requisite until the plants begin rapid growth when they will require copious waterings and frequent syringing. The temperature of the house should be from 60° to 65° at night and much warmer during the day. The ventilation should be opened just enough to keep the air pure and no draughts upon the plants allowed.

The most difficult part of growing lilies, especially for Easter, is the timing, and upon this depends the financial success of the crop, for if not in bloom at that time the returns are too small to cover the expense. As before stated, Easter is a movable feast and the time of bringing the pots into the warm homes will depend upon the earliness or lateness of the day at which they are wanted in bloom. Most growers allow from 13 to 14 weeks, the former, if Easter is in April, and the latter if Easter occurs in March, in a temperature of 60°, and the plants at this time should be showing above the ground and in fact, it would be better if they were about two inches high. If not as far advanced as this, after becoming well accustomed to the increased temperature, the heat may be increased a little and if necessary up to 70°, but the lilies grown in 60° will have the best substance and be more satisfactory. The buds should show in the foliage six weeks before the date wanted, but by growing in a higher temperature they can be bloomed in five weeks from the date of the showing of the bud. After the buds begin to grow white the plants can be moved to a house with a temperature of 50° and the blooms will be much improved, quickly growing harder, having more substance and lasting much better, but should not be grown cooler than 60° until this period of growth.

The culture of cold storage lilies differs from that pursued in the growing of lilies during the winter in that they are not given the cool treatment which seems so necessary to the latter but are planted and brought directly into the warm houses. The bulbs are generally not flowered in pots, but either in flats or benches, for they are grown solely for the cut blooms. The flats are used where no benches of soil are available and the flats placed on ordinary tables. They can also be first placed in 4-inch pots and then transplanted in the bench. This is the method generally adopted for those bulbs forced in the spring when the houses are full of other stock, but later in June, July and August the bulbs are planted directly in the benches. The cold storage lilies are only used for planting from March to September, the regular stock being depended upon for the remainder of the year. One of the most successful growers of L. giganteum states that during the warm months, that is, the June and July plantings, they will bloom in 10 weeks from the time when started, but those planted earlier and later will take from 12 to 14 weeks, averaging about 13 weeks to bring them into flower. So by weekly plantings and proper culture it is possible to have lilies throughout the year, the early shipments of giganteums arriving in time to follow the last of the cold storage.

The treatment of lilies will vary considerably in different sections of the country and every grower will have to make a study of the local conditions and adapt them to the general culture. A mode of procedure that would produce the finest crop in the north might result in failure in the south, but we have tried to outline the general culture that has proven to be successful and each grower will have to adapt it to his own conditions.

Lily Notes.

"Sidetrackers" is a name for bulbs of the longiflorum type which form partly around the old stem and retain it near the center, leaving the sound part of the bulb only a crescent formation of a strength perhaps half of that which the outside circumference of the bulb would indicate.

Some years ago a well known Japanese lily collector found one bulb of a form of L. speciosum in which the segments of the flower were banded with red instead of spotted. The bulb, however, did not survive removal from its native wilds. It failed in his garden plot.

Lilium auratum has been found to force very well by being potted when the stalk has started as much as two inches. Cold storage auratum bulbs do not produce flowers with such a powerful odor as do the freshly imported bulbs.

Retarded or cold storage lily bulbs of most commercial sorts are obtainable the year round in England.

A stiff clay, well manured soil, with a well drained subsoil, is the best for lily bulbs in the open.

The best lily for Christmas bloom is L. giganteum and the bulbs should be potted about September 15.

Lilies in pots, speciosum as well as longiflorum types, mixed with palms, make good decorations.

Lilium giganteum is now generally recommended for Easter, potting up the bulbs in November.

The best cold storage temperature for lily bulbs is 34° Fahrenheit.

LILIUM LONGIFLORUM MULTIFLORUM.

CHRYSANTHEMUMS

Specimen Plants for Exhibition.

It is time for these plants to be given their final tying or training out. This work should be attended to at once, so as to give the plants a chance to shape themselves before the buds appear. The branches being now more pliable than they will be after the buds are set, consequently they can be more easily twisted or trained as desired. The question of the style of training depends on the size and condition of the plants. If they have an abundance of shoots and branches a good specimen is easily obtained with very little training beyond sufficiently supporting the plant and its branches.

The first thing to consider is to make sure the main stem of the plant is given good support; a wire rod stake the same as is used for staking roses is as good as anything. Let it extend four or five inches above the plant for the present, then if the plant does not build up to the top when finished, the stake can be shortened some with a pair of wire cutters. Wire rings or hoops are used to form extra large specimens, but before resorting to this style of training it must be taken into consideration the extra cost of transporting and getting them to exhibitions, to say nothing of the difficulty of handling them, but when the show is only a short distance away this is the most telling way of training the plants, providing they have enough roots to make a well formed solid specimen. The rings must be supported by wires running down into the soil in the pot to carry their weight, otherwise the specimens will not be firm and many of the shoots will get broken. The tying should be done with strong thread or silkaline, and it should be started at the center of the plant, fastening the string to the stake, then loop it at each shoot until the outside is reached, following this up clear around the plant.

Another way of training, and it is the best when the plants have to be shipped long distances, as it allows for them to be drawn closely in thus saving considerable on the shipping, is done by omitting the wire rings and using only the center stake, fastening the strings to it and looping each shoot until the outside is reached the same as before. Plants tied this way can be drawn in quite close without damaging the branches.

The stock which is intended for sale as market pot plants and is now planted out in the field or frames, should now be lifted and potted, being careful to use pots large enough to carry the plants, but do not have them too large because a small plant in a overlarge pot is not satisfactory in any way; there is too much soil for the plant to do well and it does not look well for sale. On the other hand, even if the pot is a little small, the plants can be given more nourishment by watering them with liquid manure water. The compost for potting should not be made very rich with cow or other manures. A medium soil is what they like, something that the roots will work in quickly without causing a softness of growth. Any pompon or singles should also be potted. These are very useful in making up with the larger varieties and they are being more extensively used each season. After they are potted set them in a shady place for a few days and when they become well rooted in the pots they can be stood around in the house where they will get the full light.

C. W. JOHNSON.

DIGHTON, MASS.—A. E. Briggs has received a large consignment of calla bulbs which he will make a specialty this season.

THE CARNATION.

Syringing and Ventilation.

The latter part of August and throughout the month of September it is the usual experience to have heavy dews at night, and this makes it the more necessary that syringing and watering in the carnation houses should be completed as early in the day as possible, in order that the foliage may dry off before night. A surplus of moisture on the foliage helps to provide conditions that encourage fungoid diseases, and especially when coupled with a heavy atmosphere, such as is frequently experienced in the regions near the coast at this season.

Of course one cannot get along without some syringing, for plants seldom come in from the field without carrying with them a greater or less number of noxious insects, and unless red spider is conquered at this period, there will be more trouble after the firing begins, and at a time when syringing can seldom be done on account of the weather. Free ventilation and full light just as soon as the new stock can bear it after planting, is most beneficial, for carnations do not need coddling, and a strong and sturdy growth is required to perfect the flowers during the coming winter.

There is not much money in an extremely early crop of flowers, for not only is the demand light, but the flowers are of such an indifferent quality that only low prices are realized. In addition to this, there is the necessity for building up the plants in readiness for the production of a good crop later in the season, and this is more readily brought about by pinching off the short-stemmed flowers before they open, rather than to

let them open and thus to use up more of the vitality of the plants.

Speaking of vitality reminds us that there have been very few varieties that display this characteristic in so marked a degree as those of the Enchantress family, even the original variety still being a fine grower, while the white form seems to be stronger and fully as free as its parent. Rose Pink Enchantress is also a good grower, though sometimes showing rust quite plentifully toward spring. It is a pity that the latter variety would not retain the same color during the winter that it shows in the early autumn, for if so it would undoubtedly be a winner, the clear pink of this carnation at the present time being a delight to the eye. Many growers find fault with the keeping qualities of Rose Pink Enchantress, but we do not find any material difference between that variety and the others of the Enchantress family in regard to keeping, its greatest fault being in color during midwinter, when its pink contains too much purple, or else is too much streaked or brindled. But there are very few carnations without an if, for the commercial grower cannot help but become critical, when he has to contend with so many critical customers.

White Wonder is a nice grower, strong and wiry in stem, and the few flowers opened look promising at this season, but a new white variety has much to contend with where White Enchantress is at home, the latter variety being both strong and prolific.

Bright Spot seems free in growth, but it is much too early in the season to say much about the color of a cerise variety, and its freedom of flower cannot be decided at this date.

Bonfire has a beautiful color, but the plants were not remarkable in the field, nor do they seem likely to cover the ground very well in the house, but one may speak more decidedly about these newer candidates later in the season, for it would be manifestly unfair to condemn them thus early, though it would seem a reasonable prediction that Beacon still has a chance in the running.

Princess Charming shows a pleasing color, being somewhat darker than Enchantress, and the growth is strong, and very distinct. If free enough in flower, this variety will doubtless make many friends.

W. H. TAPLIN.

Growing Carnations the Second-Year.

ED. AMERICAN FLORIST:

We have a house of Enchantress and White Lawson carnations planted August, 1910 and flowered during the winter and summer. They have grown finely this summer and thrown out an abundance of new wood. We would like to keep them over another year. Do you think it would pay to attempt it? How should the plants be treated?

New York. A. S.

If the carnation plants have produced a continuous cut of flowers during last winter and this summer, then they have done enough and it would be better policy to throw them out and plant the house to fresh stock. But if they were given a cool temperature last winter and not allowed to produce to their full capacity, it may pay to run them over a second season, though it has been our experience that two-year-old plants become too grassy and produce their flowers more in crops than is the case with stock planted each season, and again the stems will average considerable shorter. We who live in the middle west cannot carry carnation plants through the second season inside, without their getting so badly infested with red spider during the very hot weather, that it is more profitable to plant fresh stock each season. If the plants under consideration are growing in a location where the nights are cool and there is enough moisture in the atmosphere so that the plants have come through the summer free of red spider and thrips, then it is possible that they may be carried over the second season successfully and be made to pay their way.

It cannot be expected that a carnation plant is going to bloom indefinitely, there must be a let up at sometime for it to make its growth. This must be taken into consideration if the attempt is made to carry the plants over. The method of treatment should be to give the plants a thorough cleaning of all decayed leaves at this time, cutting out any hard or useless wood, ring up the plants so that there is a free circulation of air all around them, then remove a little of the surface of the soil and replace with some live fresh soil (but this must not be carried to the extreme so that the roots are cut up during the operation). A little extra care should be exercised in watering directly after this fresh soil is put on to give the roots a chance to work freely in it, this they will do quicker if the bed is held a little to the dry side. Any other treatment should be the same as with the newly planted stock. C. W. JOHNSON.

YOUNGSTOWN, O.—Contemplated legislation by the city council restricting the hours for plant sales at the city market has caused a movement toward forming a corporation of the growers and the purchase of property and building a flower and plant market.

THE PERENNIALS.

Hardy Perrennials in Landscape Work.

Paper read by W. H. Waite, Western Springs, Ill., before the Railway Gardeners' Association at Chicago, August 16, 1911.

Hardy perennials are not yet so popular in this country as they are in Europe, but that they are fast forging their way to the front is getting more noticeable every year; that many of them can grow in this country, to the same perfection as across the waters, has been proved, and one has only to notice the native flora of the different states, its great variety and luxuriance of growth, to be convinced that the hardy perennial is thoroughly at home here. It is a fact that many of our best subjects are native American plants, yet superior varieties to the species have originated in Europe and have been sent out as novelties, many of them being sold to this country, thus reaping a rich harvest for the hardy plant expert on the other side. Now there is no need that this should be the case, and shows plainly that we have been sleeping and not improving and not seeing improvements in our own native flora.

That perennials can be used with good effect in most all landscape work is without question, their number and variety are almost without limit and the question is how the garden lover is to enjoy as many varieties as his conditions will allow. Since almost from time immemorial the simple mixed border has been almost the first expression of flower gardening, and as there are no arrangements of these plants so graceful, more varied and none so easily adapted to almost any kind of a place, then the border of hardy flowers should have our first consideration. These are various kinds of borders, borders fringing shrubberies, borders along walks and devoted to nothing else but hardy perennials. I do not believe in planting them in isolated beds. There are a few subjects that probably look well this way, such as poenies, but the majority of plants have a better effect in the mixed border.

HOUSE OF LILIUM LONGIFLORUM.

LILIUM HARRISII FIELDS AT STEPHENS BROS., BERMUDA.

The variety of positions and places afforded by the front of a shrubbery are so tempting for these flowers that we frequently use them to good advantage, but unless there is special preparation prepared for them we should, in cases like this, use plants that do not require a high state of cultivation to make them effective.

Very fine displays can be made by the mixed border system. By mixed border I mean shrubs and perennials together. The shrubs should not be so closely planted as it is common to see them. If planted far enough apart to show the individual beauty of the shrub and bold clumps of some of the easier grown perennials planted amongst them you will have a much more lasting effect than with shrubs alone.

Our best shrubs are all very early bloomers, and consequently throughout the summer the shrubberies are practically devoid of all flowers. By the judicious use of perennials these shrubberies can be made quite showy throughout the summer months. What fine effects can be had by using large, bold clumps of the phloxes. These can be had in a beautiful variety of colors, and selection can be made that will keep a supply of bloom from June until September. These, of course, should be planted in good, open spaces, where the roots of the shrubs are not likely to encroach on them. The background of the shrubs would, to my mind, be an ideal setting for them and would show up their beauty to a marked degree. But, you say, phloxes are often so mildewed and diseased, and that they run out so quick. True; they require good cultivation, and I do not know of any one family of plants that will doubly repay you for any extra care that you may bestow upon them like the ploxes. They should be lifted, divided and transplanted in well manured soil every two or three years. It is the young, thrifty, vigorous plants that give us the best flowers, and they are not nearly so subject to disease as the older clumps.

The different forms of hemerocallis can also be used with good effect by planting in large masses. They are also desirable on account of their foliage being so persistent and reaching the ground. There are several of the rudbeckias that are well worth planting for effect. Perhaps we are a little tired of the Golden Glow, as it has been a little overdone at the expense of many other good things. A variety of rudbeckia, not much seen, but very effective when seen in a mass, is the variety Maxima. The foliage is broad and distinct, reminding one more of the cabbage family. The flowers are large and clear yellow and have black cones about three inches high.

The campanulas and platycodons should not be forgotten. They keep up a continuous show of flowers all through the summer. The beautiful and stately Campanula latifolia macrantha is especially desirable. For spring and early summer the columbines are all that could be desired. These should be used in large masses, the many beautiful longspur hybrids being especially desirable. The German iris should find a part in every scheme. What glorious colors we have amongst these. Words fail to describe them. By a judicious selection of varieties their flowering season can be prolonged for a considerable time.

For tall, stately and effective subjects for either the shrubbery border or the border devoted to perennials only there is nothing that can compare with the delphiniums. They are valuable for their variety in height and in coloring, ranging in every shade of blue, from the palest lavender to deep indigo, set on spikes ranging from one to six feet in height. They are perfectly hardy and thrive in any good garden soil. A good friable loam with plenty of well rooted manure will, of course, improve the quality of the flowers. For bold effect and acting as a screen to any objectionable feature the tall plume poppy Bocconia cordata is often used with good effect; likewise the echinops, with its globular flowers and thistle like leaves. The different varieties of solidago, the Golden Rods and the fall asters make beautiful combinations and all are easy to grow, as witness the roadsides in the fall months. But I must not weary you and go on describing each good perennial. As I said before, the varieties are numerous and can be had to suit almost any situation, but will now consider for a few minutes their cultivation.

General borders may be made in various ways. For the majority of the plants it is wise to select a piece of ground on which the water does not stand too long. In planting select only good plants. Throw away all the poor ones. There is no scarcity of the best. To make a good effect the planter

must know his plants, as at planting time the plants are dormant and little resemble the finished product. The borders of the choicest varieties should be made where they cannot be robbed by the roots of trees and shrubs. See that the ground is well cultivated and good and rich. A good beginning is wise, for you do not wish to tear up your plants every year. In planting, plant in naturally disposed grounds, never repeating, if possible, the same plant at regular intervals, as is too often seen. The plants, of course, should be graduated in a sort of a way according to their height, but this should not be done with such mathematical precision as we see on a greenhouse bench. A bold, tall plant should be occasionally allowed to come near the edge, and low plants should here and there be allowed to run into the back. Try to avoid bare ground as much as possible.

One of the most important points in the arrangement of perennial plants in the border is the color effect. Too often we see them planted haphazard, without any consideration whether the colors will harmonize or not. In planting in masses each color has some dignity and a harmonized result should be aimed at. The time of flowering of each variety must also be taken into consideration. The part of the border for instance devoted to red flowers should have a variety that will keep up the same color effect for as long a time as possible. Likewise, the same treatment should be given the various principal colors. The warm colors, such as scarlet, crimson, pink, orange and yellow, should be arranged so as to pass harmoniously into one another. Purple and lilac go well together, but must be kept away from the scarlet, red and pink. These colors ought to be blended with whites. Blue flowers, such as delphiniums, are best when associated with whites and their own handsome green foliage. Clumps of ornamental grasses or anything with green foliage, may also be used near blues and leading up to the other colors.

BRADFORD, PENN. — Probably the youngest attendant at the Baltimore convention was Master D. Donald Graham of this city, who went with his father, George L. Graham, to meet with the Society of American Florists.

Report on School Gardens.

At the annual convention of the Society of American Florists held in the City of Washington, nineteen years ago, August 18, 1892, Robert Farquhar of Boston read a paper on "Floriculture for Children" as a means of increasing and diffusing a knowledge of flowers. He stated, at that time, "I think the members of this society should make a united effort to have the claims of floriculture and all kindred subjects for children recognized in all public schools. I feel sure that a large majority of the teachers would give their hearty support to wisely planned efforts in this direction." A broader or better suggestion is seldom made than was this. Since that time, the school garden idea has become national. Last year your committee made an exhaustive examination as to what was being done in this direction in the various states of the American union, and made a report in some detail.

When the committee was reappointed, the work of school gardening was known to be so extensive that just what the committee could accomplish was not clear, but a special suggestive circular was issued and sent far and wide over the country and the various responses that came back would be, in volume, beyond limit to reproduce.

As a sample of what this important work is accomplishing we may give a few examples. First, the greatest attention and the most extensive advertising of the movement is in effect in the large cities, but in the smaller towns comparatively little is being done. Various states are giving preeminence to instruction in primary agricultural knowledge, notably New York state, which now requires each one of the school commissioners to be able to pass an examination which covers a fundamental knowledge of agriculture. In New Jersey, particularly in the region of Orange, the work of developing the instinct of cultivation is carried on most admirably. In that suburban district of the city of New York, the neatness and beauty of so many homes is such that it may be accepted as a model for many another district of the same general character.

At Hastings, Mich., a little town of about 3,500 people, much interest is taken in the work, many waste places having been made beautiful and attractive, and many a home has been improved by the work done there. Last year one little girl, raised 160 heads of cabbage from a package of seeds costing one penny. In Worcester, Mass., great work has been done along this line and William D. Ross, the seedsman of that city, was one of the pioneers in starting school gardens and for several years gave away seeds, absolutely free, and this started a movement that has borne rich results.

At Lancaster, Pa., the florists there deserve much credit for helping along the movement. Twenty thousand shade trees were recently given out to the school children and most of them were planted. Such work as this is what makes the city beautiful. At Amherst, Mass., a novel illustration of object teaching was done by Dr. Beales, professor emeritus of the Michigan Agricultural College, who started, as a part of the school garden, a weed garden patch, so that the children could learn to distinguish destructive and undesirable vegetation.

In Buffalo, our friend, Prof. Cowell, has, in many a way, urged and helped along the work. Buffalo is a city where so many people enjoy a bit of ground with their homes, that the work there has telling effect and the superintendent of public schools, writing to W. F. Kasting recently said, "I wish to assure you of my interest in the matter and my desire to confer further with you relative to its advancement. In a crowded city like New York, window boxes play a most important part of instruction. Cedar

Rapids, that thrifty city of Iowa, is where the necessity for systematic training in school garden work is not yet fully appreciated, although our friends, I. N. Kramer & Son, florists, have done their best to start up the work.

Cleveland has probably done more systematic work in teaching children gardening than any other place, and the Home Garden Association of that city, because of its untiring work, gives a constant impetus, for from "School Gardening" it is only a step to "Home Gardening," and this is the achievement to be desired:

"To make waste places of the city beautiful and useful;
To give knowledge of gardening for pleasure and profit;
To train city children in the cultivation of the soil;
To draw attention to the importance of work on the land."

In all this work, how far it is best to go in providing tools and all seeds free, is a question. It is doubtful if you cannot go too far in public distribution of seeds. The idea that the government is going to furnish everything is not a wise course to develop true independence of character.

The United States Government has given attention to this study, and the bulletins that have been issued, particularly one by L. C. Corbett, horticulturist of the Bureau of Plant Industry, is one of great value to a teacher, because children usually are not originators; they are followers and the teacher must know, to be successful, how to be able to do things, and this bulletin, the "School Garden," is particularly well fitted for that purpose. Miss Susan C. Sipe, who delivered an interesting talk upon this subject before the convention of the S. A. F. held in Washington, has prepared a descriptive pamphlet, which is issued by the office of Experiment Stations in Washington, upon "School Gardening and Nature Study in English Schools, with Illustrations," and surely it would seem that England is the land of the "Home Garden." Our friend, Dick J. Crosby, of the Agricultural Department, has also sent out a bulletin known as "Farmer's Bulletin 408." There is not a rural school teacher but what may read that bulletin to the utmost advantage. Prof. Galloway, chief of the Bureau of Plant Industry, lends a hand upon school gardens in general and in his excellent pamphlet issued in 1905, entitled "School Gardens," covers the ways of getting at this work, that is exceedingly instructive.

In the city of Poughkeepsie, N. Y., Principal William L. Wildy says, "I am directing the work for the Poughkeepsie garden school in Eastman's Park. We have two hundred children making gardens there now. This is the third year for the garden. I am also directing the work for the School Garden Association of New York city. We have under way five gardens in connection with the public schools. They are known as model gardens. With these five gardens, we have about 2,000 children interested in the work. I find them very good workers and expect to have very good gardens there."

At Fishkill-on-Hudson, N. Y., the academic pupils mapped out and named the trees and shrubs growing upon the grounds to the number of 94, as the result of the botanical work and instruction which they received in the school, and in this same school district, the present year, there are 111 children, ranging from eight to 17 years, who are members of the "Home Garden Brigade." This work wherever it is carried on results in improving the streets.

In Springfield, Ohio, we find that Christian Binnig and John M. Good, representing the Springfield Florists' Club, presented to the members of the Board of Education a plan to beautify the yards around the public school buildings and they took hold of the work there with much earnestness. Here is a point that we wish to dwell upon. There is listed in the Florists' Directory as many as 6,000 florists scattered through the United States, aside from the nurserymen. The work that is possible to be done by these men in each of their towns is very considerable and in any effort for public improvement it never rests simply with the man who has large means, but local florists can do just as these people at Springfield have done, make the suggestion to their local board of trustees, and very few but what would see beneficial results from their efforts.

This work is now almost world wide, among the leading peoples. In Ceylon, the Royal Botanical Gardens, in their reports state, "The school garden introduced into Ceylon about ten years ago has come to stay. Every year more and more schools are taking up this line of work and there are not wanting indications that before long most schools will have school gardens attached to them. In Austria over 8,000 gardens are cultivated in connection with the Austrian schools, the pupils receiving there expert tuition in horticulture."

In Scotland the prize garden is said to be at Drumwhindle and the finest in Great Britain. The garden measures one-quarter of an acre, and is enclosed on two sides by the school play grounds. At two corners of the garden are neatly constructed rookeries. In the first border all the plants growing therein were prominently named by signs of white letters on a piece of green stained wood. Around the walls were roses, apples, plums and cherries. The work in this garden was confined chiefly to the pupils over twelve years of age. This garden is so well kept up that it is almost a museum of itself, but the work is done by the children.

To show the extent of this school garden work in further detail would be tiresome, for the work goes on throughout the United States but enough has been said to illustrate the importance given to this subject from a practical, economic view. It was recently stated by Congressman Jamison of Iowa, speaking broadly upon this subject of school garden instruction, "It is now possible for the schools, if wisely fostered and adequately promoted to transform the home, farm and civic life of every nook and corner of this broad land outside the congested district of large cities, and even there this noble movement may be made to lessen the evils of congestion, by winning the families to the land in the suburbs, while the husbands and fathers continue to earn wages in the city factory. The forerunners of a beautiful town or village are the florist establishments of the place.

The Drought in Europe.

The hot summer weather and long continued drought in Europe has had a disastrous effect upon growing crops. In England and in many parts of France and Germany there have been no effective rains for over three months, and in places where stock could not be artificially watered the growing crops are shrivelling up. The following items have suffered severely:

Manetti.—These come principally from England and France. In both countries there will be less than half a crop. The grade of those shipped will necessarily be inferior. Practically all of the available crop was bought up before June. It is doubtful if American buyers will get more than 60 per cent of their requirements, then only where they ordered before June.

In Germany the season was the hottest and driest they have had for 73 years. The effect upon the crop of lily of the valley pips is problematical, though it is almost sure that the product will be inferior to former seasons. As a precaution most firms are refusing to book further orders except at a considerable increase in price.

France in particular has suffered great damage. They grow for export millions of young fruit and ornamental stocks. Even artificial watering is ineffective, as the wells are dry. Prices rule much higher than usual and there will be many shortages on orders.

Belgium has not suffered so much as the other countries, for their export stock is all artificially watered, but the exceptionally hot summer weather has shown its effect on the azaleas. These will be smaller and more stunted in growth than usual. The quantity is up to normal, though the varieties Mme. Van der Cruyssen, Mme. Petrick, Simon Mardner and Vervaeneana remain scarce and most growers are limiting orders to percentages of these varieties. M.

OBITUARY.

Francis O. Canning.

Francis O. Canning of Villa Nova, Pa., died September 1 at the age of 44 years, from accidental poisoning by mushrooms, which had been gathered by one of the men in his employ and given to his wife to cook without his looking them over, although few gardeners knew the edible kinds better than he did.

Mr. Canning was born in England and served his apprenticeship in the gardens of the Duke of Rutland, Balvoir Castle, Grantham. He came to America 22 years ago and for six years was in charge of the propagating and plant houses at Fairmount Park, Philadelphia. He was then engaged as superintendent of S. T. Bodine's estate at Villa Nova, Pa., and after serving there some six or seven years was called to be instructor in horticulture at the Massachusetts Agricultural College, Amherst, Mass., which position he held four years. He then returned to Villa Nova in the same capacity as superintendent of Mr. Bodine's magnificent gardens and grounds until his untimely death.

He is survived by his wife, a sister in Philadelphia and a brother, Edward J. Canning, of the Botanic Gardens of Smith College, Northampton, Mass. The funeral was held Monday, September 4, in the Church of the Redeemer, Bryn Mawr, Pa., and was largely attended. Interment was in Westminster cemetery.

THE AMERICAN FLORIST

1885 TWENTY SIXTH YEAR 1911

Subscription, United States and Mexico, $1.00 a year; Canada, $2.00; Europe and Countries in Postal Union, $2.50. Subscriptions accepted only from those in the trade.

THE Newport Horticultural Society will hold a flower show in Masonic hall, September 16-19. The competition for baskets, center pieces and table decorations for florists will be on September 17, and table decorations for private gardeners and amateurs September 18. Special prizes have been offered by many of the summer residents. The annual ball will be held September 20.

THE schedule of premiums for exhibition of dahlias to be held by the Connecticut Horticultural Society September 19-20 provides for prizes for all classes for both professional and amateur growers and special premiums offered by Henry A. Dreer, Philadelphia, Pa.; A. T. Boddington, New York; O. V. Zangen, Hoboken, N. J.; Pittsburgh Steel Co., Pittsburg, Pa.; Scott's Nurseries, W. W. Hunt & Co., C. H. Sierman, Amos B. Ashcroft and H. L. Metcalf, Hartford.

DISASTROUS hail storms are reported from Wichita, Kans., and Paxton, Ill.

THE big greenhouse plant of the Dale Estate, Brampton, Ont., experienced its first injurious hail storm last month, when the houses were damaged to the extent of about one box of glass each.

FROSTY nights may be expected soon and ample provision should be made for the portection of tender plants in the open, as fine weather may continue several weeks after the first damaging cold snap.

THE report of the proceedings of the ninth annual meeting of the Chrysanthemum Society of America has been issued and mailed to members. It also contains a list of new varieties disseminated during 1910, both foreign and American, and enclosed is a list of special premiums offered for the annual exhibition to be held at St. Louis, Mo., November 7-11, 1911.

Poisonous Mushrooms.

The death of Francis O. Canning of Villa Nova, Pa., whose obituary will be found in another column, was caused by eating poisonous fungi and this shows how careful all gardeners must be before serving these vegetables, especially when they are picked in a wild state. Mr. Canning was well acquainted with all the edible fungi, but those which he ate were gathered by one in his employ, and given to his wife to cook without his having looked at them. Many poisonous fungi look so like the edible varieties that a thorough knowledge and careful study of this class of vegetables is absolutely necessary before it is safe to gather them and have them eaten. Books may be obtained which fully describe nearly all of the fungi found in our climate and stating whether they are edible or not, but these require careful study and one is not entirely secure even with this information at hand. If mushrooms are desired it is better to closely adhere to the well-known varieties and if these are not known, grow the agaricus campestris by planting spawn and thereby procure a wholesome and safe food.

The County Fairs.

This is the season of the year when the state and county fairs are held, and an opportunity is presented and generally lost by the florist and nurseryman to advertise his products. To be sure the premiums offered are not remunerative, but these fairs are always attended by crowds of people and the home decoration is becoming more and more the desire of the women, and the chances for the florist to acquaint the people with the best of floral productions and thereby show that there is a wide-awake florist in their midst, more than compensates for the time and labor expended, and at this season the value of the flowers is inconsiderable. The exhibits of plants and flowers are generally staged in the same hall as the women's exhibits, and it is therefore in the place where it will attract the parties who will be the prospective buyers, and a good display of floral products will be inspected by many who would never go to the greenhouse, and also inform them where the flowers and plants can be obtained. The only way to make the floral part of these fairs a feature is for the growers to stage an attractive display and the management will quickly see the attention that they attract and make the premiums larger that more exhibitors will be induced to make a display. These fairs certainly present a most inexpensive way for the grower of plants and flowers to advertise his stock to a large number of people.

What the Directory Accomplishes.

THE AMERICAN FLORIST CO.:

I have your latest Trade Directory, which I used as a mailing list. We sent out circulars and price list to the entire nursery and seed trade as given in the directory, and out of the several thousand names used, only about three were returned to us. The sales resulting from the use of the list were the largest I have ever had. A great many have placed their orders with me again this season. Wishing you every success, I am,

Yours very truly,
A. J. LOCKYEAR.

Evansville, Ind.

Meetings Next Week.

Boston, Mass., September 19-22.—Vegetable Growers' Association of America, Horticultural Hall.

Boston, Mass., September 19, 8 p. m.—Gardeners' and Florists' Club of Boston, Horticultural Hall.

Detroit, Mich., September 18, 8 p. m.—Detroit Florists' Club, 112 Farmer street.

Grand Rapids, Mich., September 18.—Grand Rapids Florists' and Gardeners' Club, office of member.

Hartford, Conn., September 22, 8 p. m.—Connecticut Horticultural Society, County building.

Montreal, Que., September 18, 7:45 p. m.—Montreal Gardeners' and Florists' Club, Royal Guardians building, 211 Sherbrook street, west.

New Orleans, La., September 21, 8 p. m.—New Orleans Horticultural Society, Kolbs' hall, 127 St. Charles avenue.

Newport, R. I., September 20.—Newport Horticultural Society.

Providence, R. I., September 18, 8 p. m.—Florists' and Gardeners' Club of Rhode Island, 96 Westminster street.

Salt Lake City, Utah, September 19.—Salt Lake Florists' Club, Huddart Floral Co., 64 Main street.

Seattle, Wash., September 19.—Seattle Florists' Association, Chamber of Commerce, Second avenue and Columbia street.

St. Paul, Minn., September 19, 8 p. m.—Minnesota State Florists' Association, 510 Snelling avenue, north.

Toronto, Ont., September 19, 8 p. m.—Toronto Gardeners' and Florists' Association, St. George's hall, Elm street.

Coming Exhibitions.

(Secretaries are requested to supply any omissions from this list and to correct any dates that may have been altered since the last advices.)

Chicago, September 21-23, 1911.—Exhibitions of annuals, perennials and vegetables. Horticultural Society of Chicago, Art Institute. J. H. Burdett, secretary, 1620 West 104th Place, Chicago.

Cincinnati, O., November 13-18, 1911.—Fall exhibition, Cincinnati Florists' Society, Horticultural Hall-Music Hall. George S. Bartlett, secretary, 131 East Third street, Cincinnati.

Hartford, Conn., November 8-9, 1911.—Chrysanthemum show. Connecticut Horticultural Society, Putnam Phalanx Armory. Geo. W. Smith, secretary, Melrose, Conn.

Hartford, Conn., September 19-20, 1911.—Annual floral show, Connecticut Horticultural Society, Unity Hall. Geo. W. Smith, secretary, Melrose, Conn.

Lenox, Mass., October 25-26, 1911.—Grand fall exhibition, Lenox Horticultural Society, Town Hall. Geo. H. Instone, secretary, Lenox.

Madison, N. J., October 26-27, 1911.—Sixteenth annual flower show, Morris County Gardeners' and Florists' Society, James' building. Edw. Reagan, Morristown, N. J., secretary.

Milwaukee, Wis., November 13-19, 1911.—Fall Flower Show, Milwaukee Florists' Club, Auditorium. Gustav C. Mueller, secretary, 926 Ninth street, Milwaukee.

New Bedford, Mass., September 14-16, 1911.—Ninth annual fall exhibition, New Bedford Horticultural Society, Odd Fellows Hall. Jeremiah M. Tabor, secretary, 117 Sycamore street, New Bedford.

New Haven, Conn., September 13-14, 1911.—First annual dahlia exhibition. New Haven County Horticultural Society, Harmonie Hall. F. H. Wirtz, secretary, 86 Nicoll street, New Haven, Conn.

New York, September 19-21, 1911.—Dahlia, fruit and vegetable show, American Institute of the City of New York, 19-21 West Forty-fourth street. Wm. A. Eagleson, secretary.

New York, November 3-7, 1911.—Fall exhibition, Horticultural Society of New York, American Museum of Natural History, Central Park West and Seventy-seventh street. Geo. V. Nash, secretary, New York Botanical Garden, Bronx Park, New York.

New York, November 1-3, 1911.—Chrysanthemum Show, American Institute of the City of New York, 19-21 West Forty-fourth street. Wm. A. Eagleson, secretary.

New York, November 3-12, 1911.—American Land and Irrigation Exposition, Madison Square Garden. Gilbert McClurg, general manager, Singer building, New York.

Springfield, Ill., September 29-October 7, 1911.—Illinois State Fair. J. K. Dickirson, secretary, Springfield.

St. Louis, Mo., November 7-11, 1911.—Fifth fall floral exhibition and pomological display, St. Louis Horticultural Society, Coliseum, Jefferson and Washington avenues. Otto G. Koenig, secretary, 6473 Florissant avenue, St. Louis.

St. Louis, Mo., November 7-11, 1911.—Annual exhibition Chrysanthemum Society of America, in connection with the St. Louis Horticultural Society.

Stamford, Conn., November 3-4, 1911.—First annual exhibition, Westchester and Fairfield Horticultural Society, Casino. J. B. McArdle, secretary, Merritt building, Greenwich.

Tarrytown, N. Y., October 31-November 2, 1911.—Thirteenth annual exhibition, Tarrytown Horticultural Society, Music hall. E. W. Neubrand, secretary, Tarrytown, N. Y.

Worcester, Mass., November 9, 1911.—Chrysanthemum exhibition, Worcester County Horticultural Society, Horticultural hall, 18 Front street. Leonard C. Midgley, secretary, Worcester, Mass.

Wants, For Sale, Etc

One Cent Per Word, Cash with Adv.

For Plant Advs., See ReadyReference Section.

Where answers are to be mailed from this office enclose 10 cents extra to cover postage, etc.

Situation Wanted—Florist, German, all-around man wishes position; good references; Chicago preferred. Key 492, care American Florist.

Situation Wanted—Private gardener and florist, 18 years' experience, married, no family; good reference.
Key 493, care American Florist.

Situation Wanted—By traveling salesman; 15 years' experience; well acquainted with plants, seeds and florists' supplies; a hustler; can speak German. Key 494, care American Forist.

Situation Wanted—By gardener and florist, Scotch; married wishes situation, thoroughly experienced in all branches; good references.
Key 497, care American Florist.

Situation Wanted—First-class all-around florist landscape gardener and mushroom grower, life experience, German, single, age 45. Address
Key 498, care American Florist.

Situation Wanted—By single man, 29 years of age, with 15 years' of experience in growing cut flowers and all kinds of pot plants; best of references; please state wages.
ALPHONSE WM. HOREBECK,
R. F. D. Kansas City Mo.

Situation Wanted—By German gardener, single, 25 years of age; nine years' practical experience in Germany France and this country, in private and commercial places.
FRIEDRICH GERKEN,
care of C. E. Willin, Roslyn Long Island, N. Y.

Situation Wanted—By German, 15 years' experience in growing roses, carnations, pot and bedding plants, also in nursery and landscape work; wants position in private or commercial place; able to take charge; prefer eastern states.
A. HOFFMAN,
Box 1, American Lake, Wash.

Situation Wanted—Good sober, steady and industrious party wishes to secure a situation as salesman or decorator in retail florist store or as gardener or grower on private or commercial place. Sixteen years of experience in all branches of the florist trade. Can furnish the best of references from past employers. State wages when writing. Key 480, American Florist.

Help Wanted—A man competent to manage a seed house, state age, experience, who with, and salary wanted, also references. Address
Key 496, care American Florist.

Help Wanted—First-class pot plant grower; married man preferred; must be thoroughly experienced; best references required; salary right for right party. A. WIEGAND & SONS,
Indianapolis Ind.

Help Wanted—Grower to take charge of greenhouse. Must understand growing of carnations, chrysanthemums and bedding stock. Sober single German preferred. State wages per month with board. D. S. SEVINGSTON,
1657 Crawford Road, Cleveland, Ohio.

For Sale—Two houses, 18x100, located in Irving Park; ill health cause for selling; a snap.
HENRY SCHUFFERT,
4332 Barnard St., Chicago.

For Sale—Four greenhouses; fine for vegetables or cut flowers and plants; snap if sold at once; hot water heater. Address
Key 495, care American Florist.

For Sale or Rent—An old established retail florist store in Chicago, located on Wrightwood, Sheffield and Lincoln Aves. Greenhouse in connection. For further particulars call on or write J. T. HELBOK, 941 Wrightwood Ave.,
Chicago, Ill.

For Sale or Rent—25,000 sq. ft. glass; steam heat; city water; 60 pounds pressure; for vegetables or flowers; plant situated on much traveled street, leads also to popular cemetery, creating demand for flowering plants; dwelling with greenhouses. C. M. NORTON,
629 Plainfield Ave., Grand Rapids, Mich.

For Sale—12 acre farm, best location in Illinois for truck gardening or poultry raising; greenhouse 20x25, 9-room residence and all out houses in first-class condition; one mile from Hillsboro, Ills.; $1500.00 down, balance on good terms; write for further particulars. R. L. BEALE,
315 N. 12th St., St. Louis, Mo.

For Sale—Two greenhouses, well stocked with Boston ferns and pot plants, one 20x125 feet and the other 16x20 feet; also a hot water boiler, three years old, and a large boiler in shed 20x24 feet; office 16x20 feet in connection; good location for retail trade; for further particulars call on or write. AUG. KOEBLE,
4228 N. 40th Ave. Chicago, Ill.

Wanted to Rent—Greenhouse with some land in good town in Northern Ohio, Indiana or Illinois, not too far from railroad; will lease for term of years with privilege of buying. Kindly give full particulars in regard to location and price in your first letter. Address "FLORIST,"
808 Church St., Flint, Mich.

Salesman Wanted.

A good all-'round salesman wanted; one who is accustomed to waiting on first-class trade and is not afraid of work.

To the right party a permanent position is assured, providing that he proves his worth.

It is necessary that photo (latest) should accompany all applications. Give references and all particulars in first letter and state wages expected.

DUNLOP'S, Toronto, Canada.

First-Class Store Man

With many years of experience and capable of taking charge, is desirous of securing a situation in or near Chicago.

Key 491, care American Florist.

Help Wanted

Reliable man to grow roses and carnations wanted at once. Send full particulars including age, experience and wages. Illinois. Address

Key 499, care American Florist.

Chicago.

TRADE SUFFERS A RELAPSE.

It only takes a few warm days at this season of the year to make a radical change upon the market. The cooler weather had considerably shortened up the crop and trade was beginning to brighten up quite a bit, but the warm days increased the supply and likewise shortened the demand. The event of the week has been the excessive supply of late asters. They have come from everywhere, and every grower had his boxes full of all colors. The best grades have found a good market and sold fairly well at good prices, but the medium and poorer grades have hung fire and the counters at the wholesale stores have been overloaded. Chrysanthemum Golden Glow is having a good call and the flowers are much improved and selling at good prices. The orders on some days have been for more than the receipts and had to be held over until the next day. Carnations show great improvement, especially in regard to the length of stem. Some very fine blooms of all the well known varieties were to be had on the market. Roses are being received in large quantities and the quality is very fine, but the supply is so large and the demand so meager that prices remain at a low figure. One of the most prominent growers states that the large increase of glass has caused an unusual supply of short grade roses which has kept the market overstocked. Lily of the valley is again in good supply. The shortage which occurred last week was found to be owing to one of the largest growers having lost his crop by fire which greatly decreased the supply. Orchids are to be had but the demand for these exotics is now very small. Dahlias are much more plentiful and in greater variety. The large show and the more graceful cactus varieties are now to be had in quantity. Lilies are of exceptionally fine quality and in good quantity. L. rubrum is still to be seen but there are but few L. auratum. The coarser fall flowers are to be had in large quantities and this week has brought out large vases of eupatorium to be added to already large list of this class of flowers.

NOTES.

A new retail store will be opened on the north side about October 1. Duncan A. Robertson, the expert designer of the E. Wienhoeber Floral Co., and W. C. Adams, formerly with the same firm, have formed a partnership and heave leased the store on the corner of Rush and Bellevue streets. It is a good location, in one of the best residential districts, adjacent to the North Shore drive, and with their thorough knowledge of the business they should be able to build up a lucrative trade.

The fall and Christmas plants at Muir's on Michigan avenue are in splendid condition. The Boston ferns and dracaenas are particularly fine and the poinsettias promise well for the holidays. Store Manager Rowe has just returned from a well-earned vacation spent at Cleveland, O., where he called on the prominent florists of that city and absorbed all the good things that came under his notice.

Notwithstanding the general business apathy the trade at A. Lange's has kept up well all summer and the force has all it can do to keep up with the present demands for funeral and other floral work. The transient trade has been particularly good and the large display of seasonable stock so advantageously arranged in the window attracts many a prospective buyer.

The ducklings at John Mangel's continue to attract attention to the windows and the beautiful nymphaeas which can always be seen so nicely arranged have been a feature all the summer and are still a great attraction to the people passing this busy corner.

Tim Matchen takes great pleasure in showing Peter Reinberg's customers the fancy grade of American Beauty and Mrs. Marshall Field roses that his firm is cutting. He is particularly fond of the latter and says it is the prettiest and most fragrant rose grown today.

Bassett & Washburn are experiencing but little trouble in finding a market for the choice blooms of Golden Glow chrysanthemums that they are now cutting and also the largest crop of American Beauty roses that the firm has ever had.

Marshall Field & Co. are using the new rose Prince de Bulgarie quite extensively in their window displays this week. A few were also seen in the J. A. Budlong and Weiland & Risch stores on September 11.

New tables and other improvements are being made in the attractive store of the Fleischman Floral Co. in preparation for coming fall trade.

Peter Papas, formerly with Canger & Gormley, is conducting a flower booth in the Wabash Fruit Co.'s store at 502 South Wabash avenue.

Bert Woods, formerly employed on the local market, has accepted a position as packer with the Chicago Flower Growers' Association.

W. J. Smyth and family returned from an enjoyable visit to California September 1 and are now at their summer home at Antioch.

Chas. W. McKellar says that with a few more days of favorable weather, Cattleya Labiata ought to be in full crop.

Thos. McAllister, of the A. Lange force, is spending his vacation at Benton Harbor, Mich.

J. F. Czarnik, the Chicago avenue florist, is visiting in Buffalo and other eastern cities.

POEHLMANN'S FANCY VALLEY
EXTRA FINE HARRISII LILIES

We make these a specialty.
Can supply them all the Year.
Once tried you will have no other

The J. B. Deamud Co., with the store brightened up with a new coat of white paint artistically applied by Wilder, is ready for a big fall trade. The supply of stock now being received is large and of excellent quality. An especially fine grade of American Beauty and other roses and a high grade of carnations are daily receipts, not mentioning the large quantity of excellent asters and gladioli that are always on hand.

The Illinois state fair will be held at Springfield, September 29 to October 7. Liberal premiums are offered in floriculture, of which department Robert O'Dwyer, 714 W. Madison street, Chicago, is superintendent. Copies of the premium list may be had by addressing J. K. Dickirson, Secretary State Board of Agriculture, Springfield.

John Michelsen, the hustling manager of the E. C. Amling Co.'s store, has returned from a most enjoyable visit to Buffalo, Cleveland and with the violet growers at Rhinebeck, N. Y. He says the supply of violets this year will be equal to the demand, although the better grades may be somewhat short.

Nick Kruchten harbored a thief, for on September 7 the domestic employed in the household absconded with $290 in money. She was arrested in Springfield the following day with $280 on her person, which Mr. Kruchten expects to recover September 15 when the hearing will be held.

M. B. Hirsch, The Willard Florist, has been confined to his bed for the last ten days, owing to a severe attack of sciatic rheumatism. During his illness the store has been in charge of his able wife who reports being kept quite busy with funeral work.

The bowling club will open the new season on September 27 at Bensinger's new alley, 29 West Randolph street. The chairman, Allie Zech, would be pleased to hear from those who intend to bowl this season at the earliest possible moment.

Vaughan's trial grounds at Western Springs are very attractive and interesting just now, many of the subjects being at their best. The extensive plantations of cannas and hardy herbaceous perennials are well worth inspection.

N. J. Wietor, who is a good judge of horseflesh, picked every winner in the races at the Libertyville fair on Thursday, September 8. His firm is installing four large hot water boilers in their greenhouses on Devon avenue.

Otto W. Frese, manager of the Chicago Flower Growers' Association's store, says that the organization is still receiving applications for membership, some being from the leading growers in this section.

E. E. Pieser writes from Canada that his health is about the same, the change in climate doing him but little if any good. His brother, G. H., is still very ill and his condition is considered serious.

The Briggs House Florists have made arrangements to open another store at 48 East Van Buren street on or about October 1, 1911. This store will be known as the Briggs Floral Co.

Frank Johnson says the A. L. Randall Co.'s supply department is very busy and expects the cut flower department will be the same as soon as the asters are off the market.

Poehlmann Bros. Co. is cutting a choice grade of Cattleya Labiata and Oncidiums. John Grossman, the efficient stenographer, is back on the job after a two months' vacation.

Miss H. V. Tonner received her first shipment of violets on September 9, when one of her growers jokingly pinned a bunch of 25 on his consignment slip.

Sinner Bros. are cutting a good crop of Killarney and White Killarney roses.

The Geo. Wittbold Co. is filling a large number of shipping orders for palms, ferns and other choice decorative stock.

George Perdikas arranged the floral decoration last week for the opening of Stuart's new restaurant on Van Buren street.

Charlotte Megchelsen installed a new up-to-date ice-box and fixtures to match in her store at 4656 Grand boulevard.

Julius W. Niesen, 304 E. Forty-seventh street, is preparing for the holidays by repainting and plastering his store.

The Athenian Floral Co. is planning on making further improvements to their store on Wabash avenue.

John Starrett, feeling much improved in health, is again attending to his duties at Hotel La Salle.

John F. Farrell, 4664 South State street, is being kept very busy with a large amount of funeral work.

John Propps, formerly with George Perdikas, helped out at Manusos Bros.' store for a couple of weeks.

John Kruchten the "Gardenia Man" received his first shipments of these popular flowers this week.

H. E. Philpott left for his home in Winnipeg after a month's visit in this and other cities.

Frank Williams and wife returned on September 7, from a several months' visit in Greece.

Mrs. J. A. Mendel has returned from her summer visit at the family cottage on Fox Lake.

Chas. Zapfe of the J. A. Budlong force is enjoying a two weeks' vacation.

J. A. Sikuta says the busy season is on at his North State street store.

E. Leslie is opening a store on West Randolph street, near State.

W. P. Kyle, of Kyle & Foerster, is enjoying his vacation.

Peter Reinberg,

30 E. Randolph St., CHICAGO.

Ferns, per 1000		1 50

Some of the growers are complaining at the methods adopted by some houses handling outside stock from private gardens. Much of the stock is of poor quality, is held too long before cutting and sells at low figures and they regard it as an unjust competition. The growers feel that they ought to be given first consideration in view of the fact that they consign stock at all times of the year and when it is most needed and that they suffer considerably when parties who are not really in the trade send in such stock.

Gus Rusch, formerly with Holton & Hunkel Co., Milwaukee, Wis., is in the city this week on business connected with the new wholesale house that will open in that city in the near future and in which he is interested. Mr. Rusch's many years of experience and wide acquaintance in the trade will help him considerably in building up a lucrative business.

Allie Zech and wife entertained a number of their friends at their home at 3630 North Leavitt street on Tuesday, September 12. Allie did his best to square himself with his many friends for the hasty and secretive act of a few days ago. Everybody had a good time and the couple were freely forgiven.

Zech & Mann are preparing for another busy season with the regular store force and additional office help. Mr. Zech, the senior member of the firm, is suffering from the effects of a bad cold.

Robert Newcomb has returned from a successful business trip through Michigan. He reports trade as good with the growers, all feeling very optimistic.

The Horticultural Society of Chicago will hold an exhibition of asters, dahlias and perennials at the Art Institute, Michigan avenue, September 21-23.

Chicago Florists' Club.

The regular meeting of the Chicago Florists' Club was held at the Union restaurant September 7, with a good attendance, President Philpott in the chair. The usual routine business was transacted and the following applications presented for membership: Paul E. Weiss, Arthur Schmidt, Henry Meyer, Paul Amling, Wm. Burchof and Walter Amling, Maywood; D. E. Freres, 30 East Randolph; M. H. Mann, 5504 North Clark; Wm. Lorman, 54 East Randolph, and Ignacz Stachowiac, 2619 Herndon streets.

The club, after much discussion, decided to celebrate its twenty-fifth anniversary at the next meeting, when the St. Louis, Milwaukee, Detroit and Cincinnati Florists' Clubs are invited to attend. The Wisconsin and Missouri cities have already accepted the invitations and promised to be on hand with large delegations, Cincinnati and Detroit are expected to do likewise and a most enjoyable time is anticipated. A committee consisting of A. T. Pyfer, Allie Zech, A. C. Kohlbrand, H. N. Bruns and E. C. Amling was appointed to make the necessary arrangements and provide entertainment for the banquet to be held at 8 p. m., to which the members of both the local and visiting clubs and their ladies are cordially invited to attend.

Elmer D. Smith, the well-known grower of Adrian, Mich., will read a paper on chrysanthemums at the next meeting when a short business session will be called promptly at 7 p. m.

Allie Zech, chairman of the sports and pastime committee, read a proposition from L. A. Bensinger in regard to the rental of the new alleys that the club intends to use next season. The proprietor donated $60 to the prize fund with the understanding that the club is to use his alleys and roll the scheduled number of games. The proposition was accepted and Mr. Zech instructed to go ahead and make the necessary arrangements, and if possible, also arrange for a bowling match between the visiting clubs on the afternoon of October 5.

George Asmus was called upon to explain the cause of the bowling team's defeat at Baltimore, and responded by saying there was little to be said for the score card plainly told the story. He spoke favorably of the ride over the Monon railroad, of the convention at Baltimore, and of the convention to be held here next year and urged the members to unite and make it the largest in the history.

A. T. Pyfer and President Philpott also spoke in glowing terms of the convention, and of the enjoyable time enroute.

C. W. Johnson was appointed manager of the chrysanthemum show to be held by the club on November 2.

President Philpott was upon motion of E. C. Amling authorized to appoint the committees that were necessary to make the arrangements for the coming convention.

FREDERICK, MD.—F. C. Hargett held a floral reception at his residence, August 30. The Hagerstown florists sent quantities of flowers to be used in the decorations.

NORTH TONAWANDA, N. Y.—The King Construction Co. have purchased seven acres of land with a frontage of 1,000 feet on Wheatfield street and will at once commence the construction of several buildings which will be completed by May 1, 1912, including a machine shop, structural building, woodworking shop, warehouse and office building. These will replace the plant on Thompson street which was destroyed by fire last spring.

Des Plaines, Ill.

Hoerber Bros. are cutting a magnificent grade of Bride, Bridesmaid, Killarney, White Killarney and Richmond roses. The rose and carnation crops are growing finely and a large cut of good commercial blooms is assured for this season. The stock grown at this establishment is placed upon the market at the wholesale store at 162 North Wabash avenue, Chicago, where F. C. Hoerber and Harry Meinheim so pleasantly preside, W. F. Hoerber having charge of the greenhouse end of the business. It might be said here that this firm has made a wonderful showing for the short time that they have been in business and bid fair to give their competitors a good run when it comes to distributing their high grade stock.

Frank Garland's two new houses, 41x150 feet are now completed and planted with roses and chrysanthemums. The proprietor is planning on doing some more building next year, and if he decides he will move his boilers to the north end of the range, tear down the old shed and connect the east with the west range. Mr. Garland's stock is in the pink of condition and the usual supply of carnations, roses and chrysanthemums is expected this season.

The stock in the Des Plaines Floral Co.'s greenhouses is in splendid condition and a good crop of carnations is the outlook for the coming season. This enterprising firm, is evidently up-to-date for all the late novelties such as Bonfire, Washington, Princess Charming, Mrs. C. W. Ward and Dorothy Gordon are grown here. Harry Blewitt, the senior member of the firm, is particularly proud of his Washington carnation plants and is induced to think that the Chicago Carnation Co. put out a prize winner when they placed this popular variety on the market. All of the other new novelties are in the best possible condition and they look very promising.

H. S. Garland, William Garland, Edw. Garland, Alex Garland, H. T. Gray and R. E. Gray attended a secret meeting of the Canteloupe Society on Friday, September 8,

WIETOR BROS.

162 N. Wabash Ave., CHICAGO.

when the popular young men raided Frank Garland's garden and carried away a wheelbarrow full of choice fruit. A contest was held in the boiler shed of one of the local growers, to see who could make way with the most fruit and at its close the honors were awarded to H. S. Garland and R. E. Gray, who each managed to stow away in their secret recesses, eight large, ripe and juicy melons.

The Geo. M. Garland Co., after much experimenting, has found a method of heating castings so as to eliminate all strain on the gutter which in the past has been the cause of their gutter breaking. The method also strengthens the casting, making it of a semi-malleable nature. The manufactures made a test for the special benefit of the writer, who was greatly interested and impressed with the new method.

It is heard, from good authority, that T. B. Gray of the Geo. M. Garland Co. has leased a flat and will occupy it soon. Something of the same nature is also heard of Alex. Garland, so the welcome sound of wedding bells may be expected at any moment.

Fletcher James is the proud possessor, of what he thinks, is one of the best lighted greenhouses in existence. This house, 34x125 feet, (a fine sample of modern construction) was built by the Geo. M. Garland Co., the well known local manufacturers.

H. C. Blewitt is expecting great things from his crop of sweet peas.

Lord & Burnham's new factory is now running in full blast and keeps all hands exceedingly busy turning out material for the many orders that they have on hand.

The writer wishes to thank the Cantaloupe Society and H. G. Garland for the many courtesies received during his visit to their prosperous little city.

Warren Garland is building a new house, 27x225 feet, for carnations and sweet peas.

Sol. Garland is putting up a new carnation house 27x225 feet, Garland construction.

Mrs. F. Garland is visiting with her daughter Rennie, at Albuquerque, New Mexico.

The Des Plaines Violet Co.'s new greenhouses are now all enclosed.

Grant Wiffin is building a new residence and another greenhouse.

C. Norby of Norby & Hoefle is building a new residence.

Columbus, O.

The Ohio State Fair opened at Columbus, Ohio, August 28 and continued through September 1. Heretofore, except by the Livingston Seed Co., little interest has been taken in the floriculture classes. This year we note with pleasure the appearance of Sherman F. Stephens, of Columbus, and Aug. Schneider, of Springfield. Chas. Jordan, of Wauseon, proved himself a most competent judge, his decisions being favorably accepted by the competitors.

The chief feature was a dining table decoration, which S. F. Stephens won, with a beautiful combination of My Maryland roses and lily of the valley. The Livingston Seed Co. was second, using a centerpiece of Mrs. Taft roses and delphiniums. Miss Rachael Smith of Trinway, Ohio, was third with a neat design of a lake for a centerpiece. Mr. Schneider's flowers being lost in transit unfortunately prevented him from competing in this class. The designs, bouquets and vases proved quite an attraction on Thursday of the fair. The Livingston Seed Co. took first premium on a pair of bouquets of Richmond and Killarney roses. S. F. Stephens ran a very close second with a pair of much larger bouquets of lavender and white asters, which were especially admired by the ladies. S. F. Stephens took first premium on a large funeral design, exhibiting a large wreath on an easel. Livingston Seed Co. second. The first premium for a large festival design was won by S. F. Stephens, with a very appropriate design, cornucopia or horn of plenty. The Livingston Seed Co. second. S. F. Stephens took first premium on collection of five small funeral designs, with Livingston Seed Co. coming in second. The first premium on vase American Beauties was awarded to Livingston Seed Co., on account of their exhibiting a greater number than S. F. Stephens. First premium on display of 25 varieties of cut flowers was awarded to S. F. Stephens; Livingston Seed Co., second. Vase of flowers, not over 12 inches high, Livingston Seed Co., first; S. F. Stephens, second.

Competition was keen in the plant classes. Perhaps the most notable exhibit was a fine specimen of cycas revoluta, forty years old, shown by S. F. Stephens, in whose houses it has been for thirty-six years. The plant awards were as follows:

Pair hanging baskets—Livingston Seed Co., first; S. F. Stephens, second.

Basket of plants—S. F. Stephens, first; Livingston Seed Co., second.

Collection of stove and greenhouse plants, not less than fifty—S. F. Stephens, first; Livingston Seed Co., second.

Collection of cannas in bloom—S. F. Stephens, first; Livingston Seed Co., second.

Porch box filled with plants—S. F. Stephens, first; Livingston Seed Co., second.

Collection of palms—Livingston Seed Co., first; S. F. Stephens, second.

Single specimen palm—S. F. Stephens, first; Livingston Seed Co., second.

The Chicago Flower Growers' Association

Phone Randolph 5449.
176 N. Michigan Ave., Chicago

See Plant Advertisement on Page 437, This Issue.

Vase of plants—Livingston Seed Co., first; S. F. Stephens, second.

The few remaining classes of lesser importance were awarded to Livingston Seed Co., there being no competition, as S. F. Stephens did not enter in these classes. The Livingston Seed Co. also won first premium on collections of roses, carnations, asters, gladiolii, without competition, except on roses by Mr. Schneider, who took a close second.

Flower shows and the undertaking of flower shows has resulted in getting the florists of Columbus hopelessly divided. Some new blood came in the organization, voted the club officials antique and otherwise incapable of holding anything other than club room shows, formed a new society, and to all appearances Columbus was to have a first-class show, when suddenly the bubble (as it proved to be) burst and all hopes of a fall show have been abandoned, consequently very little is heard, either of the Florists' Club or the association, except for an occasional compliment (?) through the trade papers. We need an efficient leader. Columbus has great possibilities, if the florists will only pull together and forget the things of yesterday.

Toronto.

EXHIBITION BRINGS CROWDS.

The annual exhibition brought the largest crowds of visitors this city has ever known. The exhibition as a whole was a great improvement over that of previous years. While the plant and flower displays were not so numerous as in former years, they were of high character. Particularly meritorious were the plant exhibits of Sir Henry Pellat, Thos. McVittie, gardener, H. G. Dillemuth arranged elaborate displays of grain and other products with fine effect for the Grand Trunk and Canadian Northern Railroads. The principal awards were as follows:

Group of flower and foliage plants covering 400 square feet of floor space—Sir Henry Pellat (Thos. McVittie, gardener), first; Thos. Manton, second; Reservoir Park (Douglas Robertson, gardener), third; Allen Gardens, (C. C. Collins, gardener), fourth.

Group of ferns and selaginellas—Sir Henry Pellat, first; Reservoir Park, second.

Best and most original floral design—A. S. Jennings & Co., first; with aeroplane of white and pink asters; S. A. Frost, second, wreath of orchids and lily of the valley with cork bark; Thos. Manton, third, wreath of orchids and croton leaves, with birch bark cross.

Table decorations—S. A. Frost, first, American Beauty roses and birch bark arrangements; A. S. Jennings & Co., second, windmill of white carnations; Thos. Manton, third, plaque of Killarney roses and statice

Bridal bouquets—J. J. Higgins, first, with arrangement of lily of the valley and Dendrobium formosum giganteum; S. A. Frost, second.

Presentation basket—J. J. Higgins, first, American Beauty roses in green-toned basket, with Odontoglossum grande on handle; S. A. Frost, second, American Beauty roses tied with American Beauty ribbon; Thos. Manton, third, with Killarney roses.

Judges—S. A. Anderson, Buffalo, N. Y., and Geo. Robinson, Montreal.

Headquarters for ORCHIDS and all Fancy Stock

CHAS. W. McKELLAR,

162 N. Wabash Avenue, CHICAGO.

NOTES.

The Dale Estate, Brampton, is shipping excellent cattleyas and lily of the valley. Adiantum Farleyense is now well grown here and the fronds soon will be ready for shipping. Good progress is being made with this firm's new $15,000 concrete cold storage plant.

Manager Geraghty at Dunlops has been so busy in recent days that he is compelled to take his meals on the work bench; several of his assistants being absent on vacation.

R. Jennings, Brampton, has added a new house this season and is now cutting good Golden Glow chrysanthemums for which there is brisk demand.

J. O'Brien, formerly in charge of the prison grounds and greenhouses, is now manager of the prison farm at Guelph.

John Chambers, park commissioner for many years, is now superintendent of the prison grounds and greenhouses.

Wm. Fendlay, Brampton, has his specialties, violets and carnation in the usual excellent condition.

Visitors: Mrs. Scrim, Ottawa; Wm. Gammage, London; H. L. Janzen, Berlin; Geo. Robinson, Montreal; Mr. Skinner, Mitchell; S. A. Anderson and wife, J. Palmer and Fred Beow, Buffalo, N. Y.; J. Karins and S. Green, Philadelphia, Pa.; R. Karlstrom, So. Orange, N. J.; Arnold Ringier, Chicago.

Place Your Regular Order for Cut Flowers with Us

and we will see to it that you are well supplied with choice stock at all times, especially when it is most needed.

THE OPENING OF THE SEASON

Finds us well supplied with a good grade of **American Beauty, Bride, Bridesmaid, Killarney** and **Richmond Roses,** and **all the leading varieties of Carnations.** Our **Lilies** and **Greens** must also be taken into consideration, for they are of exceptionally fine quality. Remember, we expect to hear from you at an early date.

ZECH & MANN, WHOLESALE FLORISTS L. D. Phone, Central 3284 162 N. Wabash Ave. **Chicago**

Baltimore.

A STAGNANT MARKET.

Business is almost at a standstill and nearly everyone has a kick. There seldom is an order ahead on the books, and in some cases the windows look deserted with no stock on hand. Not only do the retailers feel this lethargy but the wholesalers also. Stock is a glut with no demand, and considerable is going to waste. The city market is overstocked and fakirs are selling at any old price, and some of the stock is not worth carrying away. Asters in all colors and varieties are coming in by the wagon load and if sold bring a low price. Five cents will buy an extremely large bunch worth at least fifty cents. Roses are in heavy supply and are hard to move. Some fine blooms of carnations can now be obtained. Dahlias are a glut, they being but little called for, and some choice stock can be seen going to waste. Gladioli are still in good supply with but little demand. There is enough of all kinds of flowers but not enough business. The private gardener is doing his part. He has flowers enough not only for his people but for himself and friends, and as long as this lasts there is a poor show for the retailer.

THE TIMONIUM FAIR.

The thirty-third annual fair was held at Timonium September 5-9, and was the most successful ever held, the exhibits being very large. Among the florists that made exhibits were Isaac H. Moss, George Personette and John L. Wagner & Sons. The seed houses also made good displays and were represented by the Meyer Stisser Co., J. Manus & Co., Griffith & Turner Co. The floral displays were very attractive, many amateurs competing, and they secured some premiums. The exhibit of Isaac H. Moss, of which N. Price had charge, was a great feature. He had a pyramid of shrubbery surrounded with flower beds of the various bedding plants in the center of the hall and also floral designs, receiving first prize for floral wreath, as well as many other premiums. George Personette received the second award for the wreath. J. L. Wagner & Sons received 14 first prizes and five seconds for cut flowers and floral work. An interesting exhibit was made by J. Collin Vincent, Lutherville, consisting of various field and poultry seeds in bottles and samples of grains grown in all parts of the world. The judges were J. J. Perry and George Personette. Many catchy signs were noticed; Isaac H. Moss had "See us first for bedding plants" and "Flowers get nearer the heart than candy. Better get next;" J. L. Wagner & Sons had "If you don't see what you are looking for, ask for it." During the fair President Alexander McCormick was stricken ill on September 8. He has been connected with the fair ever since its inauguration and has served as president the last two years. He is, however, reported as improving. Among the trade visitors noted were J. J. Perry, G. Personette, John Cook, R. Vincent and wife, E. Kress, Isaac H. Moss and F. C. Bauer.

NOTES.

The Gardeners' and Florists' Club accepted the invitation to attend the fifth annual dahlia and flower show at Covington September 26-28. It is expected a large delegation will go Wednesday, September 27. The special features will be 40 acres of dahlias, 10 acres of cannas, acres of perennial phlox, the largest greenhouses in Maryland, the home-coming and reunion week and the Maryland State Horticultural Society will hold a meeting September 26.

It was a great surprise to the trade to learn that the well known firm of S. L. Lamberd Co. would discontinue business and dissolve. Owing to the death of several large stockholders the business must be liquidated. This is a grand opportunity to obtain a good paying business with a large established trade, in an ideal location, with good railroad and boat facilities.

Isaac H. Moss and wife and R. Halliday and wife have returned from their vacation spent at Tilghman's island.

Edward Kress has been awarded a certificate of merit by the club for his new red rose.

Mrs. James Glass, of Erdman avenue, has returned from her trip abroad.

J. L. T.

DETROIT, MICH.—At the meeting of the Michigan Bean Jobbers' Association held in this city September 7 reports from the several districts were to the effect that while a 10 per cent greater acreage was devoted to the crop, owing to the summer's drought, the yield will be but 90 per cent of that of 1910.

St. Louis.

WEATHER CONTINUES WARM.

The weather continues warm, but some kinds of stock are not arriving in very large quantities. Gladioli and tuberoses are shortening up. The schools have opened and this week the remaining theatres will open, and with cooler weather it is expected that the trade will pick up.

NOTES.

The Alexander Floral Co. have completed the rose house which has all the latest improvements. They have a fine stock of roses now in the field and are cutting choice fancy dahlias. They expect soon to open a retail store where they will dispose of their product. Their plant is situated in the country near the Olive street road. They are also now cutting choice fancy dahlias.

Andrew Frick, who for over five years was employed at the greenhouses of C. Young & Sons Co., in a fit of insanity caused by a severe case of sunstroke some time ago, shot his wife and then himelf. He was thought well of by those at the greenhouse.

C. J. Ford, with A. Herrmann, New York, has been with us this week taking orders for holly and Christmas novelties.

Harry Young, who formerly had charge of the greenhouses of C. Young & Sons Co., will open a retail store on Maryland avenue. The location is a good one.

Flowers shipped from Chicago arrive at 2 a. m. and are delivered by U. S. Express before 7 a. m. This is a grand improvement and pleases the retailers.

Frank Windler, with Wm. H. Smith Wholesale Floral Co., has returned from Chicago, where he served as best man at his brother's wedding.

The funeral of E. Butler, a prominent politician, took place September 12, and the funeral orders taxed the florists to supply the demand.

Poehlmann Bros. Co., of Chicago, are shipping heavily to this market, taking advantage of the new train out of Chicago.

Quite a few of the violet growers have bought violet plants in Illinois, so many of theirs having died during the drought.

All four of the wholesale houses now open at 7 a. m. and close at 6 p. m., Sundays at noon.

The Riessen Floral Co. always have the windows well stocked with flowers in season.

Otto Sander has one of the neatest and well-dressed windows in the downtown district.

H. Duernberg, formerly of Memphis, Tenn., is now with Grimm & Gorly.

TRADE VERY QUIET.

We are sorry to report that the market is quiet. When any sale of importance is made, the salesman feels like patting himself on the back or paying some one to do it and feels that he has earned the title of professor. Some day one of those professors may open a school, or endow a college, to teach the art of selling to people who do not wish to buy. Just now a salesman of that stamp would be worth his weight in diamonds. The aster bug seems to have been easy this year. Asters were never better than they are at present, they beat anything pictured in the catalogues, "and the price," they are sold in from one thousand to ten thousand lots, at a price that would not pay the cheapest help to pick them from the fields. It seems as if the farmers had gone into aster raising, with hay at $30 per ton, but it seems as if there would be money in it to devote their time in growing the latter crop. Some of the magazines have pictured how an 8x10 piece of ground can bring a man or woman into affluence, taking the photograph of a back garden for their theme, just like the fairy stories that some florists put out to the open-mouthed greenhorn about the money he can make and spend. How many wrecks have we seen of people who have been led into it by the get-rich-quick stories? There are some florists who ought to receive membership in the Ananias Club free, and a gold medal studded with diamonds every year. Carnations are all planted and the new crop is coming in, somewhat short in the stem, but the flowers have a good substance and a vigorous look. Roses are plentiful and the quality is very good.

NOTES.

A show of fruits and flowers was held in Horticultural Hall this week. A Boston paper has this to say. "A new form of kleptomania to which several Back Bay women are said to be addicted came to light yesterday. Some of the women have actually stolen apples, plums, peaches, etc." It seems funny that they always drag society people into these things, they may have come from Chelsea or Italy, but the Back Bay sounds nice, and kleptomania sounds better than stealing. Most of us when boys have had some kleptomania about us, especially where fruit was concerned.

A club as we understand limited to twenty, has been formed by some of our high lights. We hear it is to be on the lines of the Old Guard, having a monthly feast at a swell hotel. Whether this will help horticulture or floriculture, we don't know and it seems if this club is to work out problems of benefit to the general trade, why this limit?

People are home from the mountains and seashore, bills are being paid, and the growers are awaiting a good frost to kill the outside product to give them a chance to pay their winter's coal bill, and build more houses to add to the yearly glut.

The bulb men are loading up and we may expect our annual glut next spring.

BETTER BUSINESS.

With the opening of the schools there is a change for the better, as this has caused the return of many families from the country and seashore. There have been quite a few early weddings which has caused a demand for good stock, select asters and dahlias, as well as choice roses, being good sellers. The supply and assortment of stock now coming to the market is excellent. There is, in fact, rather more offered than finds a ready sale even at the increased demand. Asters are very abundant and while of good quality are hardly able to hold their first position in the race with the dahlias, which are now seen in larger quantities. There are a number of choice sorts, which are of such perfect form and splenidd color and with long stems, that they stand in a class by themselves for producing decorative effects. The Dorothy Peacock is a grand variety, its perfectly formed flowers with the lovely light and deeper pink shading is very striking and proving a good seller. All the rose stock is improving, new crop of American Beauties is showing more substance and color, White Killarneys are losing the muddy tints and all sorts are adding to their length of stem. Some very good carnations are seen, the Ward seedlings being quite conspicuous with their size and length of stem. Lily of the valley is in good demand. Cattleyas are sold as they arrive. As there is not enough to go around 60 to 75 cents is the price.

NOTES.

Duncan McCaw, one of the coming men of the business, now with the Robert Craig Co., in speaking about economy in building greenhouses, says he cannot see the advantage in using high-priced materials. He thinks they increase the cost of construction from twenty-five to fifty per cent. A well-built house of good lumber, gotten out at a local mill, will, if properly looked after in the matter of paint, last for about 20 years, while the interest that has to be paid for money to help build the high-class houses could be earned on the amount saved if built on the cheaper plan and this very often means the success or failure of the business.

Godfrey Aschmann, who has made the araucaria a specialty, is now celebrating the twenty-fifth anniversary of the handling of this popular house plant. Gradually from his first importation of 100 plants he has increased his trade until he now handles over 10,000 per annum, going abroad annually and personally selecting his stock from the best growers of Belgium.

The coming dinner of the Florists' Club to celebrate its twenty-fifth or silver anniversary, is meeting with favor by all members of the club and it bids fair to be the largest and best social gathering the club has ever given. The presence of the ladies will add lustre and will be an inspiration to the speakers who, in addition to the local talent, will be the most famous and flowery of the profession from all parts of the country. K.

Pittsburg.

A SURFEIT OF ASTERS.

Asters everywhere, of every quality and color you can think of; in fact one handles them all day one way or another. Among them are some that are remarkably fine, every bit as large as early chrysanthemums. The sales are fair but it takes a strong demand to make a hole in the amount. Gladioli are a close second but move out very slowly. Roses and American Beauties are both fine and plentiful. Carnations are beginning to be a factor, some of them having long stems. Lily of the valley has been scarce but is easing up again.

NOTES.

Among the retailers Mrs. E. A. Williams, A. W. Smith Co. and Randolph & McClements are cutting some fine indoor asters. A. W. Smith Co. is featuring Tritoma Pfitzerii in the window displays, and they certainly make a "red hot" appearance.

The McCallum Co. announces that their store will be opened in Cleveland, O., at 421 High avenue, September 30. W. Q. Potter, vice-president of the company, will be the man in charge.

The florists' baseball clubs have laid away their bats for the season, with the exception of the E. C. Ludwig Floral Co. team—they generally pick up a game for each Saturday.

HOLTON & HUNKEL CO., 462 Milwaukee Street, MILWAUKEE, WIS.

Washington.

STOCK OVERABUNDANT.

A New York paper headlines a news article from its correspondent in this city with economy the watchword at Washington, or words to that effect. It is pleasing to note that once in a while a New York paper publishes something that is at least half true. The correspondent was referring to economy in the conducting of government affairs, political economy if you will, but not the kind that has made the names of John Stuart Mill, Adam Smith and Henry George famous. Their efforts along these lines were prompted by sincere desire to help the plain people, whereas the efforts of our present-day politicians, so-called statesmen, are intended to fool the people and secure their votes in 1912. The old story of the ins and outs trying to out-Herod each other will for the next year be repeated with variations. At this time it cannot be foretold with any certainty what effect the political activity of the approaching season will have on business, but it is very quiet now. A very warm September keeps the florists' best customers at their summer homes and cool resorts. The great army of government clerks and other employes keep dropping in from their vacations, beautifully tanned but with lean pocketbooks, and economy will truly be the watchword with many of them for weeks to come. There is an overabundance of stock, and even if it was all good much of it would not sell. Asters are a drug, and now that the new crops of roses and carnations are beginning to come in most dealers will be glad to see the finish of the asters. Recent heavy rains gave the gladioli, dahlias and other outdoor stock a fresh start and there will be plenty of it till frost comes. Of the new crop of roses there is some fair stock and some that is very poor. Carnations planted in the houses the latter part of July and first of August have now a good hold on the soil and are beginning to show as good a quality of bloom as can be expected at this time.

NOTES.

Mrs. Mary E. Freeman has asked the court to grant her letters of administration on the estate of her late husband, Joseph R. Freeman. The estate is estimated by Mrs. Freeman to be worth $150,000. Mr. Freeman left a will leaving all his property to his wife but it was witnessed by only one person, the law requiring two. In this document Mr. Freeman said that he was "indebted in many ways to his wife" and expressed complete confidence in her integrity. With the consent of her four children Mrs. Freeman will be appointed administratrix. She has always been considered wealthy in her own right.

Z. D. Blackistone has let the contract for extensive improvements in his store at Fourteenth and H streets N. W. and expects when they are finished to have the finest retail store in the city.

George Dalglish, designer with Geo. H. Cooke, has spent several weeks' vacation at his old home in New Jersey. He was accompanied by Mrs. Dalglish and the children.

Leapley & Meyer have recently been showing some very attractive features in window decorations and good stock.

W. W. Kimmel has been very busy with a job of landscape work at the new Senate Office building.

Harry Payne will continue to manage the retail business of the J. R. Freeman estate.

Fred Miller, for many years a designer with Gude Bros., is now with F. H. Kramer.

Adolphus Gude is pushing work on their new range on the Bladensburg road.

A. B. Garden is cutting largely from a new crop of roses and carnations.

A. F. F.

Albany, N. Y.

FLORISTS' CLUB MEETING.

At the September meeting of the Albany Florists' Club held at the establishment of the treasurer, Patrick Hyde, 484 Hudson avenue, reports on the clambake held on September 3 were given. Louis F. Schaefer, chairman of the committee, made a preliminary report on the outing which he said was an enjoyable affair, 101 persons being present. Frederick Goldring, treasurer, reported on the sale of 103 tickets with some returns still to be heard from. The committee was continued with instructions to make a full report at the October meeting. Gustave Johnson, gardener for Mrs. J. Blair Scribner, Saratoga Springs, was elected a member and four applications were presented to be voted upon at the next meeting. Under good of the club, Charles Sanders started a discussion on the subject of keeping plants through the season for customers. Mr. Sanders made it quite plain that these "boarders" are a source of considerable dissatisfaction to the trade and the problem confronting the retail florists here is how to get rid of this often undesirable class of patronage. "Boarders" take space in the greenhouse that might better be devoted to plants that will bring at the proper season three or four times the money that will be obtained for the keep of the alien plant. Some of the material turned over to the florist to board is often in the last stage of decreptitude, yet the customer expects at the end of the season that the plant will be returned in prime condition—often an impossibility. The discussion that followed showed that the problem has numerous phases: good, bad, indifferent, necessary, and unnecessary. One local florist said he had adopted the policy of informing customers who asked that plants be kept over the season, that he was sorry, etc., but the greenhouses were already filled and no more plants could be taken. His report was that this answer proved often to be a diplomatic way out of the difficulty and the customer went away satisfied and his trade was retained. Others report that good customers often requested that plants beyond hope be discarded and new stock furnished and the whole charged on the bill. Others brought out the vacation element, the factor of friendship and other subtle phases, all tending to show that each case has really to be handled upon its merits and that the solution lies with the good judgment of the retailer who cannot lay down a hard and fast rule to apply to all cases. After the meeting refreshments were served and an entertainment of popular songs, parodies and recitations was given by a clever amateur, Dennis F. McCarthy, who has been for several years a friend of the club and a favorite with the members at all the important gatherings. The October meeting will be held at the headquarters, 71 State street, on the evening of October 5.

NOTES.

Cottagers at Lake George held an interesting flower show at Bolton Landing Saturday, September 2, which was well attended by the residents of the famous summer resort. Exhibits were in 28 classes and included cut flowers, potted plants, fruits and vegetables. The object of the exhibition was to encourage a higher standard among the residents in all products of the garden.

SEPT 30.

W. Q. POTTER.

To GROWERS of OHIO and INDIANA

We will open a first-class Wholesale Cut Flower and Florists' Supply House on the above date where we can dispose of your stock to advantage. We can and will give you satisfaction as proven by our great success in Pittsburg. All our growers there are putting up more glass. We will give you weekly reports and **Weekly Settlements.** We need growers of good stock and wish to communicate with you at once regarding your output this season, come and talk it over with us, or better yet drop us a line and we will go and talk it over with you.

Cincinnati.

GOOD MARKET CONDITIONS.

The market is easy in about all lines, apparently plenty to go around and practically all orders are easily filled. The volume of business transacted was such that it could not help but be gratifying to all concerned. The prices realized were naturally not top prices, but considering the extraordinary supply they were fair. The supply of roses is on the increase and the quality is moving in the same direction. The Mrs. Taft, Bride, Ivory, Bridesmaid and Killarney roses are all A 1. American Beauties, too, deserve special mention for the offerings are strong and the quality everything that might be desired. Asters and gladioli are in oversupply. Most shipments arrive in first class condition. Some, however, owing to careless or slipshod packing are badly bruised and move last, if at all. The appearance of the gladioli, while still good, bespeaks the end of the season for them. Easter lilies, mostly longiflorum, are in heavy supply, and with the ruling prices are attractive to the buyers. Their quality and condition is also worthy of commendation. Carnations are quickly rounding into form. The blooms get better day by day and the stems longer. Cosmos is coming in strong and evidently proves a good seller for it is quickly cleaned up and most of it is ordered days ahead of the time of arrival. The supply of greens is good and adequate for request.

CLUB MEETING.

The Florists' Society held their regular monthly meeting at their club rooms September 11 with President Gus Adrian in the chair. The attendance was one of the largest and most enthusiastic that has assembled at such a gathering in a long time. An invitation of the Chicago Club to their 25th anniversary was read and referred to the secretary, Alex. Ostendarp, to find how many men would make the trip and also to the bowling committee composed of Chas. H. Hoffmeister, Ray Murphy and Albert Sunderbruch to get a team to bowl at the tournament. The flower show committee through R. Witterstaetter and Max Rudolph announced that they would like to get a line on probable exhibitors and their exhibits if possible. Lawrence Fritz, the popular young clerk at C. E. Critchell's, was admitted to membership by acclamation. Just before the close of the meeting the bowling team, composed of C. E. Critchell, captain; Al Heckman, Wm. Schumann, Al Horning and R. C. Witterstaetter, that represented the club at Baltimore, presented Chas. H. Hoffmeister with a handsome shaving set as a token of appreciation of the work he had done as chairman, secretary and treasurer of the bowling and outing committees. Mr. Heckman made the presentation speech. Mr. Hoffmeister thanked the members of the team and also the society for putting him in a position where he could do the work and stated that any of the others if in his place could easily have done the same. After the meeting the ten pin enthusiasts adjourned to alleys to try out their arms. Many of them succeeded very well.

NOTES.

The vacationists are now drifting back to town. All report pleasant trips. C. E. Critchell has a bad gash in his leg reaching from his ankle to his knee, caused by his 200 pounds or more going through a dock. He had taken the Duluth trip and been to the Snows. Gus Adrian and Miss Cora Pherson at Wm. Murphy Co. were at Mr. Murphy's camp at the latter place. Max Rudolph and Henry Schwarz are busy relating interesting experiences of their European tour. B. P. Critchell was at Benton Harbor, Mich.

Ray Murphy is wearing a smile that won't come off. He is now a proud papa; a baby daughter arrived last Tuesday. Congratulations, Ray.

Visitors—Paul Berkowitz, of H. Bayersdorfer & Co., Philadelphia, and Sam Seligman, of Sprinkleproof fame, from New York; Miss White, Lexington, Ky. H.

Cleveland.

The McCallum Co., of Pittsburg, Pa., will open a new wholesale cut flower house September 30 at 421 High avenue, which is very accessible to all the retail florists, of which W. Q. Potter will be the manager. Mr. Potter moved to this city some time ago.

New Orleans, La.

Business in the city now is at a standstill. The majority of our people are still away and will not begin to return until next month. The florists are taking in a few orders for weddings and funerals. The flowers are in a general way poor, having had too much rain. The chrysanthemum crop for November 1 is looking somewhat better than a few weeks back and the growers are devoting all their time now to produce a good crop of flowers for that day.

NOTES.

The New Orleans Horticultural Society will hold its monthly meeting September 21, when they will decide to make their headquarters with the New Orleans Progressive Union.

Chas. Eble, Harry Papworth, U. J. Virgin and C. W. Eichling have returned from the Society of American Florists' convention in Baltimore and report having had a good time.

The Seed Trade.

American Seed Trade Association.

Leonard H. Vaughan Chicago President; Marshall H Duryea New York First Vice-President; Edgar Gregory, Marblehead, Mass., Second Vice President; C. E. Kendel, Cleveland O., Secretary and Treasurer.

Next annual convention, June, 1912.

CANADIAN peas and beans, in the Essex district, are turning out very poor this season.

IT is understood that Utah is now producing culinary peas for Pacific coast growers.

A MEETING of onion set dealers will be held at the Sherman House, Chicago, September 21, at 8 p. m.

VISITED CHICAGO: Arthur L. Deal, of W. W. Johnson & Son, Boston, England; S. B. Dicks, of Cooper, Taber & Co., London, S. E., England.

GRASS and clover seed deals, the coming winter and spring, will require real money with which to operate and plenty of it.

SECRETARY WILSON of the Department of Agriculture seems to be in bad for having accepted the honorary presidency of the National Brewers' Association.

CHICAGO.—Prices on the Board of Trade, September 13, for grass seed, were noted as follows: Timothy, $13 to $14.50 per 100 pounds.—J. C. Vaughan has returned from the east.

CLEMENT DENAIFFE, one of the oldest seed growers in Europe and head of Denaiffe & Son, Carignan, France, died at his home there on August 31 after an illness of only a few days. He was 76 years of age.

YOKOHAMA, JAPAN, August 21, 1911.—The general opinion here now is that the lily crop does not come up to expectations. There have been during August several storms and the weather has not been satisfactory. Some damage has been caused to growing crops by the weather conditions and it is likely, as anticipated from the first, that there will be some shortage in the large sizes. With favorable weather to September 10 the yield will probably be normal.

ACCORDING to report received from Erfurt, Germany, we gather the following items will be very poor: Aster, nasturtium, verbena, silene, phlox and nemophila. Below middling are: Winter stocks, double wallflower, snapdragon, lobelia, helichrysum, pansy, poppy, mignonette, salpiglossis and senecio. Middling: Campanula, carnations, bachelor's buttons, clarkia, godetia, gaillardia, sweet peas, lupins, marigold, petunia, scabiosa, myosotis and larkspur. Perennials are going to be very short with the exception of digitalis.

TORONTO, ONT.—S. E. Briggs, of the Steele-Briggs Seed Co., has returned from a five weeks' sojourn at Georgian Bay.—Mrs. Annandale, wife of A. W. Annandale, who has been seriously ill, is progressing favorably.—The Steele-Briggs Seed Co. is building a new warehouse, with five stories and basement, 110x140 feet, corner of Clarence square and Spadina avenue. The new building, with two and one-half times the capacity of the present structure, will be ready next June, when the old building will be vacated.—J. A. Simmers reports business conditions good.—Visitor: Arnold Ringier, Chicago.

American Seed Trade Association.

SPECIAL COMMITTEES.

President Leonard H. Vaughan has appointed special committees as follows:

Delegates to National Board of Trade, Albert McCullough, Charles H. Breck.

Committee on seed legislation, Charles D. Boyles, chairman; George S. Green, Watson S. Woodruff, F. W. Bolgiano, Kirby B. White, M. S. Griffith, A. E. Reynolds.

Committee on postal laws, S. A. Wilson, chairman; William B. Currie, E. C. Dungan, H. L. Holmes.

Committee on customs and tariff, H. E. Fiske, chairman; Charles S. Briggs, W. Atlee Burpee, W. H. Grenell, H. F. Michell.

Committee on transportation, Ben. P. Corneli, chairman; R. W. Dulaney, A. B. Clark, M. Wilhelmi.

Committee on experiment stations, Linnaeus Allen, chairman; A. F. Mangelsdorf, C. N. Keeney.

Committee to confer with National Seed Analysts, Chas. N. Page, chairman; Kirby B. White, C. D. Boyles, M. H. Duryea.

Representatives on joint committee with florists and nurserymen, S. A. Wilson, H. E. Fiske, Ben P. Corneli.

ATTLEBORO, MASS.—H. W. Vose has opened The Flower Shop at 28 South Main street with a full line of plants and cut flowers.

Wichita, Kans.

A SEVERE HAIL STORM.

A severe hail and rainstorm visited this section on Wednesday evening, September 6. The storm began about 5 p. m. with rain and hail. The first section of the hailstorm was accompanied with considerable wind, which caused it to do more than the usual damage to outside stock, although there was nothing remarkable in the size of the hail stones, only a small percentage being large enough to break glass in an ordinary greenhouse roof. This was followed by a second precipitation and there was no lack for size then. They surely were big ones. Many of them would measure 1½ or two inches across. These were mostly flattened in form and seemed to be made up of a number of smaller hail stones frozen together. The greenhouse roofs were badly broken, many in the center of the storm being almost a total loss. The storm was probably four miles wide, but it had every greenhouse in Wichita in its path. W. H. Culp & Co.'s plant was near the western edge, and their loss was about 15 per cent of their glass area, while some of the greenhouse owners near the centre of the storm report fully 90 per cent broken. Chas. P. Mueller's loss is about 50 per cent, F. Kuechenmeister reports about 30 per cent. The greenhouses of the lettuce growers, which are south and east of these establishments, were more heavily hit.

There was a quick, rough count made next morning for the purpose of getting at the amount of glass needed for repairing the damage. These figures were available by noon and most of them in the hands of a hustling young jobber, who then got busy with wire and long-distance phone, and, owing to the size of his order, was able to get very close prices from the factories. With this for a basis his quotations were such that he reports that he landed the order of every greenhouse owner. His shipment of glass will be at least five carloads. This affords a good example of the benefit of co-operation in such matters, for it saved both time and money for the greenhouse owner. So far as known all the glass lost was insured in the Florists' Hail Association.

The hailstorm was followed by a heavy rainfall, which continued more or less severely till 5 o'clock next morning, when the government gauge recorded 7.99 inches of precipitation, practically eight inches. As a result much low or flat ground was under water. Mr. Kuechenmeister and Mr. Mueller were both troubled with surface water in their greenhouses.

As a result of the storm the report of conditions made last week regarding supplies of stock needs much revising. Instead of quantities of outdoor stock, such as asters, gladiolus, etc., there is practically nothing, and stock is very scarce. Except for a small cut of indoor stock, such as may usually be had at this season, the market is bare and the retailers are shipping in their daily supplies. This, with an unsteady trade, as is usual at this season, does not fill the cash drawer very fact. W. I. CHITA.

HARTSDALE, N. Y.—The first annual flower show will be held September 29-30. Many valuable prizes are offered and a large exhibit is expected.

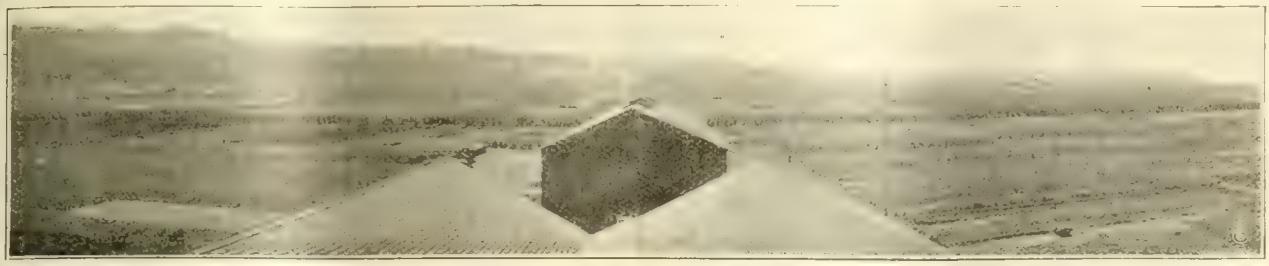
Sole Agent for U. S. and Canada, CHARLES JOHNSON, Marietta, Pa.



To The Trade:

The accompanying Picture is a reproduction of a photo engraving used by C. C. Morse & Co., in their advertisement which appeared in the Aug. 31st, issue of the Florists' Review, the picture and wording of their advertisement being apparently intended to convey the idea that this picture is a part of 900 acres in one tract devoted by them to seed crops. This is not the fact, as our Seed Ranch of 320 acres, most of which appears in the picture used by them, is a part of the 900 acre farm referred to by them in their advertisement. The buildings and the immediate foreground of the engraving are part of the C. C. Morse & Co. ranch. Everything in the rear of the long row of Sunflowers which crosses the picture from right to left are the **Crops of the Pieters-Wheeler Seed Company, about 320 acres.** We are therefore taking this opportunity of notifying The Trade of the apparent misrepresentation. We are still growing seeds on the same tract of land, which our Company and its Predecessor has occupied for about 5 years. We will again grow seeds on the same tract for 1912 and on another 300 acre tract which we have just secured near Hollister.

PIETERS-WHEELER SEED COMPANY, Hollister, Calif.

Important Postscript:

We have recently installed New Machinery in our Cleaning House, including an Air Compresser for thoroughly cleaning each mill between each run of seeds; we are the first and only California Seed Growers to introduce this additional precautionary device. All our seeds are grown from selected stocks, carefully rogued and cleaned and HIGH GRADE in quality.

We will have some surplus **Onion, Lettuce, Radish** and **Sweet Peas,** which we will be glad to quote to Seedsmen interested.

Prices for Growing Crop 1912 will be Promptly Named on Request.

B. L. Watts, State College, Pa., President; H. F. Hall, Boston, Mass., Vice-President; S. W. Severance, 508 Walker Building, Louisville, Ky., Secretary; M. L. Rusteuik Cleveland, O., Treasurer. Annual meeting at Boston Mass., September 19-22 1911.

Massachusetts Asparagus Growers' Ass'n.

The annual field day of the Massachusetts Asparagus Growers' Association was held at the experiment station at Concord, Mass., September 15. The annual meeting was held in the building in the afternoon and H. F. Hall, president of the New England Market Gardeners' Association, addressed the meeting upon "Cover-Crops and Irrigation in Connection with Asparagus Growing."

Notes on Endive and Celery.

With us endive is more difficult to handle than celery. Our market calls for it early, that is it sells readily from September 1 to November 1 and poorly after that. The reason for this is that after November 1, greenhouse lettuce is in ample supply which weakens the demand for endive. Often the weather conditions in September and early October are such as to make outdoor lettuce tough and bitter, hence the demand for the bleached and tender endive. To get endive well bleached it must be tied up, and this is risky in warm rainy weather. The plants are very subject to decay. We have experimented considerably with endive, and find they are sensitive as to where the tie is located. If tied loosely about in the center or a little above, they will grow erect and being quite open on top will bleach somewhat like boarded up celery. One will find the least binding together near the top induces decay. Then the next stop is the constant tying of small lots, say every three days, so no one bunch has to stand long waiting for market. In warm weather we figure on seven days to finish a lot, in cool weather, fourteen and in cold weather three weeks. We use flax binder twine cut in lengths and make a double twist and no knot. That way good time can be made in tying and when ready to cut for market these ties come off easily and are thrown on the next row to be used again and again. If properly handled, endive is one of those side line crops that can be made to pay handsomely. We do not like any of the fine curled varieties, as they are too tender. We prefer the coarse and strong growing green curled. Endives transplant readily, hence we always start our plants in plant beds and transplant at intervals into any vacancies that occur towards fall. They can be tied and bunched like celery and that way the season is easily extended down to New Years.

Celery should not be hilled in warm weather. If early celery is desired, 12 inch boards are best; use stakes to hold the boards in place and start a new lot every week for a succession. After cool weather sets in in October, hilling is best, as it is a better frost protection than the boards, and then we use all our boards for cold frames to carry our radishes and head lettuce into early winter. MARKETMAN.

Renewing Soil.

ED. AMERICAN FLORIST:

We have a greenhouse in which we grow lettuce in the winter and vegetable plants in the spring. The house was built last fall and the soil has been dry since last May. Will we have to change the soil this year? How much of the soil should we take off? Could we add four or five inches of new soil and spade it all together? Kindly give us advice as to the best method to pursue. A. H. D.

Pennsylvania.

The question whether to renew soil or not is quite easily answered. If former crops were satisfactory, it will be best to retain the old soil, otherwise not. When we have a good proven soil to work with we should retain it. By getting new supply we run some risk, unless we can obtain it where former lots were taken. The drying it is not a detriment necessarily. We would apply a fair coating of lime and water to such beds as soon as possible; and when in a mellow condition work up and pulverize thoroughly; then if not needed for some time, apply a coat of manure, old preferred, but new will do and soak this enough to wash the fertility into the soil. This sprinkling should be repeated to within a short time of planting the beds. Thirty days would be a good time to give this moist treatment. While this manner of treatment is most excellent for lettuce beds, it is not so desirable for seedling beds, as the manurial properties are sometimes too strong for the tiny seedlings, causing poor germination, damping off and non-development. In fact, for all seedling beds, we want only moderate fertility; and if any manure is used it should be well spent, such as hot bed manure. Additional new soil is always desirable if only an inch at a time.

MARKETMAN.

Montreal.

BUSINESS IMPROVING.

Business is improving, the return of the people to town from the country and the re-opening of schools caused a considerable stir, but the demand for table and window plants surpasses anything ever experienced before. The supply of Boston ferns is quite large but if the present demand continues it will be exhausted before winter. Cut blooms, since the beginning of cooler weather and with rain have improved and are of fair quality. Asters, what there is of them, are away ahead of those a month ago.

NOTES.

A party of gardeners took a trip to Wm. C. Hall's summer camp last Sunday. The camp is situated on Lake Manitou in the Laurentin mountains, in the midst of the most beautiful scenery. After the somewhat great appetite, caused by the bracing air, was ably adjusted by Mrs. Hall who proved to be an able hostess and cook combined, Mr. Hall took us out for a motor boat ride around the blue waters of the eight-mile long lake, and after taking some views from some of the highest hill tops and also posing for Mr. Hall's camera, a hearty supper was partaken of. With cheers for host and hostess the party left for home.

The exhibition of the Montreal Horticultural Society which was held September 6-7, was fairly successful, the quality of the exhibits was, notwithstanding the unfavorable summer, in most cases higher than usual, especially in fruit. The principal prize winners were W. J. Wilshire, Geo. Pascoe, Geo. Miles, J. Luck, E. Hayward, Jos. Bennett, Hall & Robinson, Jos. Deltroguies, R. Burrows and Geo. Teussel.

The meeting of the Montreal Gardeners and Florists Club held September 4, was mostly taken up with convention talk. John Welsh and others spoke of the Canadian Horticultural Association convention in Ottawa and G. A. Robinson in great detail and in a humorous way told of the S. A. F. convention in Baltimore.

Visitors—J. Ramsden, Silbery Nurseries, Bergerville, J. Hughes, A. Carlson, Quebec. LUCK.

THE REESER PLANT COMPANY

Exclusively Wholsale Plantsmen. SPRINGFIELD, OHIO

The Nursery Trade

American Association of Nurserymen

J. H. Dayton Painesville, O., President; W. H. Wyman, North Abington, Mass., Vice-President; John Hall Rochester, N. Y., Sec'y.

Thirty seventh annual convention to be held at Boston, Mass., 1912.

CATALPA BUNGEI on its own roots makes quite a showy bush.

LOWELL, MASS.—Purchasing Agent Foye is to ask for bids for several thousand plants and shrubs for the park department.

CAMDEN, N. J.—City Gardener Jacob Fish, popularly known as "Uncle Jake," will take advantage of the veterans' pension act and retire from active service.

ROCHESTER, N. Y.—Articles of incorporation have been granted the McGlennon & Kirby Co. to conduct a general plant and nursery business. The capital stock is $50,000 and the incorporators are James S. McGlennon, Rochester; Thomas Kirby, Brighton, and Orla J. Whitney, Oswego, N. Y.

NEW YORK.—Articles of incorporation have been granted the Knight & Struck Co., Manhattan, to deal in and grow trees, shrubs, etc. The capital stock is $75,000 and the incorporators are Thomas Knight, Rutherford, N. J.; George F. Struck, Orange, N. J., and Hibbard D. Darlington, Flushing, N. Y.

STURGEON BAY, WIS.—A party consisting of representatives of the State College of Agriculture, prominent nurserymen and officers of the Wisconsin Horticultural Society, in company with D. E. Bingham, of this city, made a trip through the northern part of Door county, inspecting the cherry and apple orchards. They were much pleased with the outlook and predict that in time the whole northern peninsula of Door county will be one vast orchard.

The Elms at the Arnold Arboretum.—II.

The Huntington Elm, Ulmus vegeta, is now believed to be a hybrid between Ulmus glabra and Ulmus montana, the two species which grow naturally in England where the Huntington Elm originated. It is a large tree with a short trunk and numerous large branches spreading at narrow angles, and in this country it grows more rapidly than any other elm tree. It should be oftener planted here. Ulmus major, which is supposed to be a hybrid of the same parentage as Ulmus vegeta, is another noble tree which a hundred or a hundred and fifty years ago was much planted in the suburbs of London. There is another elm in Europe which is perhaps a hybrid but its parentage is uncertain, and it appears to be without an authentic name. This is the elm which is planted in all the Dutch cities and, judging by its appearance in these cities, it is one of the best of all street trees. There are large trees in Holland, in the Champs Elysees in Paris, and at Versailles, so if it is a hybrid it is not of recent date.

When in Massachusetts we speak of Ulmus campestris we do not refer to any of the trees already mentioned in this bulletin but to the so-called elm of the roadsides, avenues and hedgerows in southern England. The origin of this tree is obscure. Growing spontaneously it is known only in England; it never ripens seeds, and it increases by suckers which are produced in profusion. Some authors have thought that it might be a hybrid; by others it has been suggested that it was brought from Italy to Britain by the Romans. It is a splendid tall long-lived tree with a massive trunk and erect or spreading branches. This is a tree which has grown to a larger size in Boston and its suburbs than any other planted tree. Major Paddock established a nursery of these trees at Milton in the eighteenth century and the Paddock Elms, once the glory of Tremont street, and the so-called English Elm trees which once stood on Boston Common are of this form. The oldest name for this tree is Ulmus surculosa. All these elms, and many other species, hybrids and varieties in small individuals can be seen on the northeastern slope of Bussey Hill. Ulmus surculosa is common near Boston. Ulmus glabra and some of its varieties are not common in this neighborhood, and occasionally plants of Ulmus nitens and Ulmus foliacea can be found in eastern Massachusetts. As these last are usually raised from seeds in European nurseries the imported seedling plants show great variation in habit, foliage and in the presence and absence of wings on the branchlets.

The Mountain Clematis.

Beautiful garden effects are created by the more vigorous members of the clematis family when permitted to ramble freely over balcony, rustic trellis, pergola or tree. Clematis montana is one of the most decorative of its family and, when once well established, grows with surprising vigor and rapidly covers a large extent of surface. It comes into flower toward the end of May, and few more charming spring pictures can be imagined than an old evergreen, with its branches garlanded by the ivory white flower-wreaths of the mountain clematis, says a corrpespondent in The Garden. When utilized to drape a balcony or veranda, a certain amount of pruning is sometimes necessary. This should be carried out immediately the flowering period is past, so that the summer's growth may produce new flowering wood. These new growths should be restricted and trained as little as possible, in order that the plant may present a natural rather than an artificial contour when in blossom. It must not be hard pruned or cut to the ground annually, as is the custom with Clematis Jackmanii. It should be left unpruned, save to cut out weak or exhausted wood, seeing that its flowers on the old wood, such as the young growths of the preceding year, which should be laid in for flowering during the winter. C. montana, in good soil, will sometimes grow as much as 20 feet in a season, so that there is little difficulty in securing good flowering wood, and the result will be superb. Any good loamy soil will suit this clematis, but the position should be well prepared by making a hole at least three feet across and of the same depth and filling this with good soil mixed with plenty of old manure. When once fairly established it is wonderful how it holds its own, even under, seemingly, the most disadvantageous circumstances; but to do so its roots must have undisputed possession of the soil when commencing their growth in new quarters. In the springtide of the year many a delightful picture is afforded by hardy flowering climbers such as this clematis. Strong-growing climbers such as C. montana soon attain large proportions and clothe a wide expanse of wall in a comparatively short space of time. It is when allowed unrestricted freedom of growth that the most picturesque effect is obtained. Balconies and verandas can be rendered objects of loveliness by the help of C. montana. Standard specimens are rarely seen, but they add greatly to the charm of that portion of the garden in which they have a place. The best plan is to use for each plant one of the tall iron supports with umbrella head, such as are manufactured for the training of rambling roses as single specimens. With such aid the formation of fine examples will be a comparatively easy matter, and they may be maintained in the best possible condition for a long period.

SPECIAL PEONY OFFER

A Select List of the Best Varieties. Ten Acres of Peonies Grown.

Jackson & Perkins Co., Newark, New York

PEONIES It is not necessary to grow a thousand or even a hundred varieties to have a collection that will include everything really worth while. We have sifted out all the duplicates, eliminating those with defects of any kind, and present here an assortment covering the entire range of colors, extending over the blooming season, and representing the very best out of hundreds of varieties gotten together from specialists in France, England, Holland, Japan, and in this country. Strong divisions, with three to five good eyes.

	Per 100
Camille Calot, light rose	$10.00
Carnea Striata, pale flesh, shading to almost pure white	9.00
Charlemagne, creamy white, center light lilac, flesh shaded with chamois, late	20.00
Clarissa, rosy-pink; inner petals sulphur	6.00
Comte de Diesbach, dark red; early	10.00
Comte de Jussier, outer petals pink, inner yellowish	10.00
Comte de Nanteuil, very large and full; dark rose	8.00
Comte de Niepperg, dark rose-pink; large bloom	10.00
Comte d' Osmond, white with sulphurish center	20.00
Couronne d' Or, immense; very full, imbricated, ball shaped bloom; snowy white with yellowish stamens; fragrant; perfect as a cut flower sort; very late, coming in after all other long-stemmed whites are gone	20.00
Delachei, deep crimson-purple; one of the best dark peonies; late midseason	10.00
Dortens Coros, bright pink	6.00
Duchesse de Nemours, the Calot variety, cup-shaped, sulphur-white; late, and one of the best whites	20.00
Duke of Wellington, flowers fragrant, sulphur-white, large and well-formed; strong grower; stems long and firm; late midseason	20.00
Edulis Superba, soft pink; very early	10.00
Felix Crousse, brilliant, flaming red; far and away the best red; the popular color with florists; late midseason	25.00
Festiva Alba, ivory-white, with occasional crimson spots in center petals; ships well and stands cold storage excellently; late midseason	15.00
Festiva Maxima, the ideal early white for floral work; a well-nigh perfect peony	15.00
Floral Treasure, rich, soft pink	15.00
Francois Ortegat, semi-double; large purplish-crimson bloom, with brilliant golden yellow anthers; very striking	10.00
Gen. Cavaignac, lively lilac-pink, shaded clearer pink	8.00
Gloire de Douai, purplish scarlet-crimson with black reflex; late	10.00
Golden Harvest, very large blooms; blush guard petals; creamy-white center; midseason; one of the freest bloomers	15.00
Grandiflora Carnea Plena, very early; clear flesh-pink, shaded lilac; keeps well; ships well; desirable for cutting or landscape work	8.00
Grandiflora Rosea, light rose; outer petals very large, inner smaller and bunched; vigorous grower	8.00
Lady Bramwell, silvery pink; late midseason	10.00
Laius, outer petals white, inner sulphur, changing to white; medium size	12.00
La Tulipe, late; very large, full, shell-formed blooms, borne on long, erect stems; delicate rose, fading to creamy white; one of the best	30.00
La Sublime, crimson; fine, full, fragrant	12.00
Livingstone (true Crouse variety), soft rosy pink, silvery reflex, strong, long stems; best late pink	40.00
Louis Van Houtte (Delache), fine dark crimson; very double; strong	12.00
Meissonier, reddish purple, crimson center	50.00
Monsieur Barral, soft, clear pink; large and full; long stems	10.00
Monsieur Dupont, very large; ivory-white with carmine border in center petals; attractive; late midseason	20.00
M'lle. Marie Calot, satiny rose	10.00
M'lle. Rene Dessert, in clusters, soft lilac with silvery-violet reflex	20.00
Madame Crousse, one of the best whites; midseason	20.00
Madame Ladon, bright cherry pink	10.00
Madame Rose Rendatler, delicate rose	8.00
Nigricans, very late, brilliant, purplish-crimson	20.00
Nobilissima, bright, deep pink; good stems; lasts wonderfully	20.00
Officinalis Mutabilis Alba, earliest white	15.00
Officinalis Rosea, earliest light pink	15.00
Officinalis Rubra Pleno, the well known, very early, double crimson	12.00
Palmata, cut-leaved; single scarlet; earliest	25.00
Papaviflora, guard petals pure white; others yellowish; excellent	15.00
Phryne, blush white	8.00
Prince Imperial, brilliant purplish-scarlet; free bloomer; fine for massing in landscape work	12.00
Prolifera Tricolor, soft flesh, with center of golden yellow	8.00
Queen Victoria (Whitleyii). There are two well-known varieties of this name. This is the standard pure white market variety for storage	10.00
Richardson's Dorchester, salmon-pink, one of the very best late ones	25.00
Richardson's Grandiflora, flesh-pink, with lighter shades in center; fragrant; one of the largest peonies known; latest pink in bloom	50.00
Rosea Superba, brilliant, deep cerise-pink, blooms compact and perfectly formed; healthy growth; long stems; keeps well; late midseason	25.00
Rosea Plena Superba, very full flower; delicate pink and salmon	10.00
Tenuifolia, single, bright scarlet	25.00

THE BOOK OF GLADIOLUS

THE first authoritative book on this bulb ever printed in America, or possibly the world, issued April 1, 1911. This 120 page book, written by Matthew Crawford and Dr. Van Fleet, contains many chapters covering all sides of growing, propagating storing, etc., and also some pages of valuable cultural notes gathered from reliable sources. A necessity for both amateur and grower. The book is bound in cloth and fully illustrated.

THE GEO. WITTBOLD CO. Edgebrook, Chicago

Tuxedo Horticultural Society.

The Tuxedo Horticultural Society held its first outing and clam bake at Hillburn, N. Y., August 23. The beautiful weather brought out a large number of gardeners and friends. The distance between Tuxedo and Hillburn is about 10 miles, which offered a nice drive and was greatly enjoyed. Arriving at the field about 11 o'clock refreshments were served, after which the first part of the programme was begun, which consisted of boys' and girls' race under 7 years, single and married ladies' races, single ladies' three-legged race, married and single men's races, high jump, broad jump and a 100-yard dash open to all. All of the events were well contested, furnishing plenty of fun. About two o'clock the refreshment committee took the crowd in charge and all repaired to the shade of the trees, where the bake was served. A great time was given to Karl D. Schaeffer, the society's first president, who just arrived. After each one had satisfied himself in eating and drinking the gathering assembled in a group to be photographed, after which the second part of the games was started. The football match was the first item. It was between the single and married men, and the single men had an easy time making three goals, while the married men puffed and blowed in getting one goal. Next was the fat men's race. The first was a tie between D. S. Miller and James McMachen, but in the second trial Miller succeeded in getting in first. Charles McTaggert walked in for third with a smile. Several races for children followed, all receiving prizes.

The tug of war was a great feature, in which the married men remembered their defeat by the single men in football. They furnished plenty of weight and walked away with the single men as if there was nothing on the other end of the rope. The result of this victory encouraged the married women to challenge the single women, and of course they followed their husbands' example and pulled the young ladies wherever they wanted to. This terminated the day's sports and all went home well satisfied that they had a good day. This was the first clam bake given by the society. No doubt but a few things may have been overlooked, but with this year's experience the society feels that the next one will be a greater success.

The regular meeting of this society was held on September 6, with David S. Miller in the chair. The entertainment committee's report concerning the outing and clam bake at Hillburn, N. Y., showed that the society is doing very well. The executive committee was ordered to secure the ball room in the club house of Tuxedo park the later part of October for the purpose of having a lecture on gardening. It was also decided to have a display of flowers and plants on this occasion to make the hall attractive.

James Allen showed a vase of beautiful asters, for which he was awarded a certificate of culture. Mr. Allen gave a very interesting talk on asters, their introduction, improvement, what they were and what they are now, their diseases, enemies, etc. He described how the plants, a native of China, were introduced to Europe by a missionary about 1731. It was then rather a single flower with a yellow center. About 1837 a number of varieties were offered by the New York seedsmen. The varieties and improvement of this very valuable flower today is wonderful. Great credit is due to Germany in making the first great advance in the improvement of these plants. He highly recommends the branching varieties, especially for cutflowers. A hearty vote of thanks was extended Mr. Allen.

A. FISCHER, Secretary.

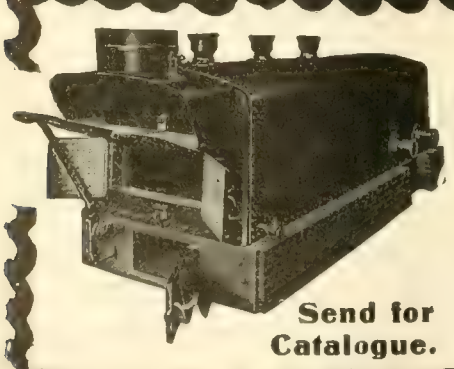
What the Users Say



Send for Catalogue.

There Is No Better Boiler.

Gentlemen:—The Kroeschell Boiler works better in every way than the boiler I had before and has given me all the satisfaction I want. Yours truly,
ROBERT HARDIES, Mannheim, Ill.

From the Far West.

Gentlemen:—Your Kroeschell Boilers are it. Very truly.
INLAND NURSERY & FLORAL CO., Spokane, Wash.

Heats Canadian Range Easily and Saves Fuel.

Gentlemen:—I had a flue boiler before I got the Kroeschell, which could hardly heat the glass, although it used more fuel than yours. I also have your Generator, which is giving good satisfaction. I think a Generator would pay for itself in a few weeks.
Yours very truly, J. L. HILLBORN, Leamington, Ont.

CROSS SECTION OF A SUNLIGHT DOUBLE GLASS SASH ON A SUNLIGHT FRAME

Here is the sash you don't have to cover

Two layers of glass instead of one. A ⅝ inch layer of dry, still air between—a perfect non-conductor—a transparent blanket—takes the place of mats and boards.

The saving in time and labor

Sunlight Double Glass Sash will pay for themselves in a single season. They never need covering—and therefore save half the time you have to give to single glass sash in covering and uncovering—in watching them on frosty nights.

Earlier, Stockier Plants

Under Sunlight Double Glass Sash **the plants get all the light all the time.** Every grower will see at once the value of the earlier, stockier plants resulting. Your crops will mature weeks ahead of the grower's who uses single glass sash—and *you will get the benefit of the high prices in the early market.*

Here is what one grower says

Harry S. Walker of Terre Haute, Ind., grew cabbage, tomatoes, eggplants and mangoes under Sunlight Double Glass Sash last season. The minimum thermometer was 15 below zero. No plants were injured. He says in part: "Plants grown under single layer sash were not to be compared with mine".

Agents wanted: A liberal commission to responsible agents where we have no agents now. Write us for details.

Get our free catalog today—It contains the details of this new invention for hot-beds and cold-frames, and testimonials from well known growers all over the U. S. who have used Sunlight Double Glass Sash successfully under all weather conditions. Use the coupon at once and get this interesting book free.

Send 4 cents in stamps for a valuable booklet on Hot-bed and cold-frame gardening by Prof. W. F. Massey. There is no higher authority in the country. If booklet is wanted mark a cross (X) on square in coupon and enclose 4 cents in stamps.

"Best in 20 Years' Experience," says Cyril H. Barry, Green Lake, Wis., about

The Burnham

"In my twenty years of experience in running greenhouses, the 'Burnham' boiler has them all beaten for easy firing. The circulation in both houses and hot beds is perfect. I made a critical examination of plant at time of testing and found everything O. K. Have never seen such a bunch of conscientious workmen on a contract job as those you sent out here, and I am well pleased with everything."

Sincerely yours,

Cyril H. Barry

Trouble Talk

No 5
Second Series

It has to do with the difference between size of fire box and size of grate and how some get fooled.

They say "figures don't lie." Now that's a lie all by itself. It should read—"**all** figures don't lie, but most of them do." Just for example, take the width of grate on a boiler—some concerns don't say a word about the actual grate width, but give a figure that is the width of the fire box instead; which you take to mean grate surface width. Now those figures don't lie, but what you are lead to think certainly is one. If these figures were for the width of the fire pot immediately over the grate, it would not be so misleading; but they are taken at the widest part of the combustion chamber itself, which they boldly claim to be a part of their fire pot.

Here are some figures of a non-deceiving kind that show more plainly just what we mean. They are a comparison between our No. 30 boiler and that of an extensively advertised sectional boiler of the same listed size which we will call "So and So's."

Our grate space actually measures 30 inches wide.
So and So's is 28 inches.
Our fire pot 10 inches above the grate measures 35 inches.
So and So's 30 inches.
Our combustion chamber at its widest point is 41 inches.

Still So and So claims their's to be a 30 inch boiler. And to still further convey to you an impression of large fire surfaces in their fire pot, they give the combustion chamber measurement at its greatest width.

In all our tables you will find one column showing **actual grate space width**—another showing **actual fire pot width**. Greenhouse and dwelling house rating are shown each in a separate column. There is no juggling with figures.

The question I want to have sink deep into your memory box is: If it is necessary to resort to foxy little tricks like figure juggling to sell a boiler, is it a boiler you can depend on being dependable in other ways claimed for it? When a boiler has a 1½ times back and forth fire travel on each side, and its makers advertise that "it has a 3 times fire travel," don't you think it is done with the idea of conveying to you that it is like our make of boiler which has a three times travel on **each side;** or really six times in all?

You know, and I know, that there has been no end of troubles caused because of falsely rated boilers. So this is just a friendly suggestion to keep out of trouble by buying a genuine greenhouse boiler rated on **what it has actually done in greenhouse work;** and not a dwelling house boiler with its greenhouse ratings based on its performances in dwelling heating.

If you are looking for the truth, the whole truth, and nothing but the truth about boilers, and how to keep out of boiler troubles; send for our new Supply Book. Address your letter right to me.

The Trouble Man
Hitchings & Co., Elizabeth, N. J.
I'll see to it myself that it's mailed.

Next week's talk will be principally about boiler dampers and why so many are fooled by them and occasionally damn them.

Sketch will show two kinds of dampers.
The damns will be left to your imagination.

At Belle Haven, Conn., We Built This Curved Eave House for F. C. Ravolle That Is the Gardener, L. Repaci, Standing by the Door.

IT'S one of our curved eave "fit in houses." We call it a "fit in," because it fits in a most attractive way between the gardener's bungalow cottage and the other near-by buildings.

Its placing and treatment were carefully considered in relation to the surroundings. And that's why so many of our houses are especially attractive. They are something more than mere greenhouses—they are an ornamental interesting part of the grounds.

But back of it all is the best construction money can buy and a building experience covering twice as many years as the next oldest in the business.

And these are the things that count with you—and count big.

Send for that 100-page catalog.

Send along your employer's name also, and we will see that he gets one.

SUGGESTIONS FOR PLANT GROWERS.

Fall Propagation.

There are many of the plants used for bedding purposes that are better propagated in the fall, for cuttings are more readily obtained, root easily and allow time for the growing of good stock. Ivy geraniums, to have fine plants in the spring are much better propagated at that time. Vincas for the spring sales propagated in September make fine plants by the first of May. The long shoots can be cut up to two eyes each and they will root in three or four weeks, then potted in 2½-inch pots and kept cool until February, when they should be potted into 4-inch pots and grown along the sides of the beds or benches. Abutilons should be handled in a similiar manner. The tender tips should be used for the cutting and these should be kept well watered and shaded until roots are formed, when they can be potted and kept cool until towards spring. The pelargoniums that were cut back and dried off last month should now be made into cuttings and should be taken and placed in the cutting bench. There are also many plants that the stock should be looked out for at this time and a few plants lifted and housed before frost. Many growers prefer to raise their salvias from cuttings and in this case a few plants can be potted and grown on. Any extra good double petunias should be lifted. Pyrethrum or feverfew, coleus and the other soft wooded plants should be selected and potted that they may become established before cool weather.

Pansies.

The pansies for early spring trade should be placed in the frames that they may become established before freezing weather commences. Make the soil good and rich. It is the plants with large flowers in the spring that find the quick sales and these cannot be obtained in poor soil. Set the plants about five inches apart and water well after planting. Keep those of a kind together and plant all the mixed lots adjoining. There is more time wasted in the retail selling of pansies than any other flower, traveling back and forth over a mixed bed trying to pick out a nice assortment. This is especially so with some customers and in setting out the plants try to prevent this as much as possible. When freezing weather comes cover the frames with sashes which will prevent the snow from lying too heavy upon the plants and also much freezing and thawing. If frozen for months and covered with sash no harm will be done, but if a warm spell should come on, the sashes should be raised to allow ventilation.

Sweet Peas.

The early sown sweet peas will soon need some support, and the plan most generally adopted by growers with peas inside is to pass strings around the plants fastened to stakes at each end of the row. If the rows are lengthwise of the bench stakes to which the strings may be fastened will have to be arranged about every ten feet. As soon as the plants have attained a height of six inches the first string should be tied on and strings should be added every six to eight inches as the plants grow taller. The plants must be kept growing straight throughout their culture, so they must have strings quite close together for their twining arms to catch upon, and if when the plants are in bloom they are not kept tied up a large number of the flowers will have crooked stems. Care must yet be taken with the watering and until the plants show active growth they should receive but little water, being kept on the dry side. If allowed to be too wet, stem rot will result and the plant will die. If sweet peas are to follow the early chrysanthemums the seed can now be sown. Three or four seeds in a 4-inch pot will be right for this time, for they will have to grow in the pots about six weeks, the middle of November being about as early as the chrysanthemums can be cleaned out and the beds made ready. Careful watering will be the watchword for the young seeds and do not thin out too early. Wait until the plants are in good growing condition, when they can be thinned out to one plant in a pot.

Cyclamens.

In order to have nice large plants of cyclamens for another year, now is the time to sow the seed. This can be deferred until later and the seed planted at any time until the first of the year, yet it is much better to start them early and obtain a nice well-foliaged plant full of bloom in a 6-inch or 7-inch pot than a smaller plant with but few blooms and flowers, which is sure to be the result with the later sown seed. Soak the seed for about 24 hours in tepid water and place the receptacle in a warm place, and plant in flats about one-half to three-quarters of an inch apart and there will be need for but little further labor until later in the winter. Be sure and have a light porous soil with a good proportion of leaf mold. The plants that are to be in bloom for Christmas should now be making good growth and be in the blooming pots. Any buds that show up at this time should be removed. Give the plants plenty of room and leave them from now on in full sunlight and in a cool, well-ventilated house. A sharp lookout for aphis must be kept up and regular fumigation continued. The plants for late winter and spring blooming can be kept out in the frames as long as safe from frost and then placed in cool quarters until time to give them more heat, which will depend upon the time they are wanted in bloom.

Anemones and Ranunculus.

The grower desirous of having something out of the ordinary in early spring should grow a few anemones and ranunculus. The bulbs are inexpensive and will help to increase the variety at a time when the flower users are looking for something that they have not seen all winter. No doubt failure in starting these bulbs has caused many growers to give up the attempt of their culture, but if once understood they are as easily grown as any other of the bulbous flowers. The bulbs should be planted in flats close together and covered with about half an inch of soil and then placed under a bench in a cool house. Under no circumstances water the soil or place them where water will drip upon them, for if they become wet they will surely rot. Place papers over the flats to prevent evaporation and in about three weeks the bulbs will throw out roots and the tops start. They can then be placed in pans or in the benches and grown as any other bulbs are handled.

Wintering Centaureas.

ED. AMERICAN FLORIST:

Can you inform me how to winter Dusty Millers after taking from the field in clumps? S. B.

The plants should be lifted before early frosts and potted and carried through the winter in a cool greenhouse. If it is desired to keep them for propagation cuttings may be taken in September and rooted in a similar manner to geraniums. The propagation of this plant by cuttings is, however, not generally the practice of growers for the seed germinates rapidly and the plants much more economically grown from seed. The seed of Centaurea candidissima (the true Dusty Miller) should be sown in November, and C. gymnocarpa in January or February. W.

Autumn Weddings.

THE CHURCH DECORATION.

Where a church is spacious, it requires quite a different handling of floral decorations and designs. The chancel decoration of yellow chrysanthemums is effective, using the loose tall and drooping arrangement. Garlands of oak foliage and acorns can be draped artistically under the windows at the back of the chancel, using very large bunches of golden rod where the garland is caught up and at the end fastenings. Cover all the railing in the chancel with a fluffy garland made of golden rod and acorn branches. Palms always give the best finish around the steps of the chancel to cover up pillars, etc., using smaller ferns and very tall vases for grouping, or a very loose and graceful bunch, of chrysanthemums.

The sides of pews will look well covered with an oval disc arrangement of acorn branches with chrysanthemums laid flat in the center of each. This disc should be tied to each pew with a large bow of yellow satin ribbon. Grace and apparent carelessness should be the keynote in decorations nowadays. The beauty lies in making it look as if the flowers were casually placed there, thus giving it the natural artistic grace. This is particularly emphasized in loose festoons of golden rod and autumn foliage hung over doors and extended from pillars and arches. The acorns intermingled with the golden rod and other autumn foliage is good for a window mat. However, palms can be effectively arranged in church windows.

In front of the first row of pews pots of yellow chrysanthemums can be so arranged that their heads extend above the pews, forming a sort of hedge. This gives a mass of color and is a contrast to the arrangement of palms on either side of the chancel. In the foyer of the church place huge bunches of golden rod and foliage with palms where necessary.

THE HOME DECORATION.

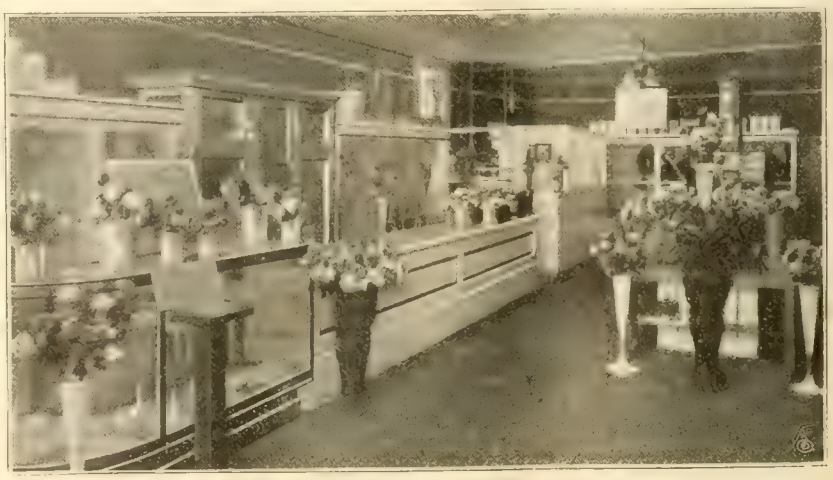
Let us consider the ceiling first: This can be turned into the roof of a bower by using Southern smilax or strings of asparagus passing them back and forth until the ceiling is a network of delicate green foliage. The weight of the decoration should be toward the upper part of the room, the whole dwindling down with potted palms against the walls. It takes a little skill to arrange this with a stunning effect.

Use white posts or pillars where it is necessary to make a division in the room where those who are to receive with the bride are to stand, the bride and groom to stand under a bower. Connect the posts, pillars and bower with white satin ribbon and outline the bower at the back with tall palms and cover the bower with golden rod and autumn foliage. Deck each post with a big cluster of golden rod, arranging it so as to form a loose round bunch. Bank palms where necessary. Make an arbor effect of branches of foliage if the hallway permits, and extend the effect into the second reception hall. Fill fire places with ferns, placing electric light bulbs back of them to give them life. Arrange foliage in graceful festoons around upper part of wall, placing large bunches of yellow chrysanthemums on mantels, using asparagus to drape the mantel. Arrange vases with bunches of chrysanthemums where most effective.

Use yellow shades for all lights. Take down portieres and drape asparagus and arrange a pretty cluster of golden rod in the center in a heavy garland effect, using a wide yellow sash ribbon to tie back the asparagus. But this must be just a suggestion of tying. Do not make the old-fashioned bow, but the square effect now in vogue in sashes; it is more effective. Where a radiator is to be covered use a long narrow basket arranged with golden rod and festoons of asparagus to cover the lower part, banking ferns in front.

Where different color schemes are the vogue in the home, in the pink room white chrysanthemums should be used instead of yellow—but yellow looks well in almost any other color combination. The hardy white hydrangea can be prettily used with chrysanthemums where golden rod is not available.

Place on the piano a huge mass of chrysanthemums in a brass jardiniere. Feathering ferns should conceal the top of the bookcase with no touch of color. There must always be a large



ROSEMONT GARDENS FLOWER STORE, MONTGOMERY, ALA.

A WELL GROWN CYCLAMEN.

proportion of green in the room and a small proportion of flowers—otherwise the blossoms lose in effect. Brass jardineres and candlesticks are most effectively used with the green. Do not let any inharmonious bric-a-brac remain in the room. Study to get a good general effect; do not consider one corner of the room, but the whole room; not one room, but all the rooms.

THE DINING ROOM.

For the table arrange a loose bunch of yellow chrysanthemums with maiden hair fern in a brown wicker basket. Tie a wide white satin sash ribbon intermingled with one of yellow around the body of the basket. For candelabra use a mat made of the heads of chrysanthemums with an edge of maiden hair fern. A long piece of yellow satin can effectively be placed the longest stretch of table, edging it with a garland of maiden hair fern. Place palms in dining room where most effective and arrange festoons of foliage over doors and windows. Tall vases of chrysanthemums can be arranged to good advantage among the palms, lending a touch of color. Drape asparagus on chandelier and on any electric light fixtures.

For the bride make a bouquet of small white chrysanthemums combined with a touch of orchids and finished with maiden hair and a shower of small chrysanthemum buds just breaking. For the bridesmaids yellow chrysanthemums with autumn foliage tied with yellow satin ribbon. The foliage should be small leaves and sprays. A. E. KLUNDER.

Schizanthus.

Schizanthuses are ideal plants for the amateur, as also for the gardener where a large amount of decoration has to be done. They give a better return for the labor and expense bestowed on them than any other plant I know, and last well in room, window, or conservatory. It is quite easy to have a succession of plants in flower for nine months in the year, and sufficient for a large establishment can be obtained from a small package of seed. The flowers blend well with those of any other plants, and, what is perhaps the most important item to amateurs, they seem to be exempt from insect attack. It is usually recommended to sow seeds for spring display in the autumn, and while I admit that you may get a little earlier display and perhaps a little larger plants, I have this year proved that the game is not worth the candle, states a correspondent of Gardening Illustrated. All gardeners know too well how valuable is space under glass in the winter, and that it is next to impossible to avoid a little crowding, which in the case of the schizanthus means straggling and drawn plants.

The great secret in their culture is not to give any check from start to finish. Pot off into small pots as soon as the two rough leaves appear, shifting on to larger pots as the pots get full of roots until they reach their flowering size, which should be six inches for fair-sized plants. Pinching of the shoots is also very important, as the plants must be grown to a good size and shape before they are allowed to flower. So long as they are not starved at the roots, the more you pinch the better display of flowers you will get. A compost consisting of one part sand, two of leaf-mould, and three of loam is what I have found most useful.

Forcing Lilacs.

Specialized in the region of which Paris is the commercial center, the forcing of the lilac has so extended as to become a veritable industry. In the hands of the skilful grower the white lilac can be produced nearly the year round, but are generally brought into the market to follow the chrysanthemum and continue until their true season.

To produce a crop of lilac blooms in winter, it is necessary to secure a stock of Lilac de Marly, six to seven years old or even older, well furnished with flower buds. This stock is specially

grown for forcing, planted closely in rows and trained for this purpose by limiting the number of branches, so as to secure the best possible development, by disbudding the base and the stems so as to give the plants plenty of air to insure ripening of the wood and the formation, on the remaining branches, of flower buds. These buds are easily distinguishable by their superior size and rounded shape. It is also indispensable, for early forcing, to use only rested plants, lifted and kept dry from the month of September, as only these plants, after their enforced rest, will give satisfactory results; lilacs which have not been subjected to hard frost, enough to stop all trace of vegetation in their tissues, develop badly and give but imperfect results.

Before bringing in the plants the suckers at the base and whatever small sterile branches remain should be removed and the roots immersed in water for two or three hours; after draining them sufficiently, bring them into the house, place upright, close together, in double layers even, if necessary; when placed, fill the spaces with soil, covering the roots and base of the plant an inch or two and water copiously to carry the soil into all the interstices and well around the roots. From this time the plants may be given a day temperature of 78° to 82° and a night temperature of 68° to 72°, taking care not to pass these extremes. The plants are to be sprayed at least four or five times a day, maintaining a moist atmosphere; shade is given either by means of a close lattice, old straw mats or litter held in place by laths—in any case to give a dim light. As soon as the young clusters of flowers appear at the ends of the branches, the spraying should be confined to the lower parts of the plant the buds which start from the base and branches of the plants should be removed, leaving only a single leaf bud below the flower cluster; defective flowers should also be removed, and the central one in case three clusters start from the same point.

The cutting is made, according to season, 18 to 21 days after the plants are brought in, when a part of the flowers are open, those at the top being still closed, but ready to unfold; the stems are cut as long as possible and placed at once and allowed to remain over night in cool water in a closed room at a temperature of 50° to 55°. The branches fill with water, the flowers become firm and acquire a resistance which they would otherwise lack. For succession, plants are brought in weekly; after February first, lilacs may be forced without so high a temperature; but to have them white they must be constantly entirely shaded from the light, which also causes them to fade much sooner.—V. Enfer in Revue Horticole.

HOUSE OF GARDENIAS AT DEERFIELD NURSERIES, DEERFIELD, ILL.

Gardenias at Deerfield, Ill.

On the northern side of Chicago, on the Chicago, Milwaukee and St. Paul railroad, is the pretty little country village of Deerfield and here in pleasant surroundings Frank and Otto Kottrasch have established a small but prosperous greenhouse plant which they have named the Deerfield Nurseries. These young growers have for the last year been sending into the Chicago market some of the finest gardenias than are to be had, and with an idea of seeing their crop and methods of culture a visit was paid them a short time ago.

The range consists of four houses devoted to gardenias and chrysanthemums, the latter to be followed with sweet peas with which they are also very successful in growing. While a little early to see the gardenias at their best, for they are as yet but just beginning to flower, yet the plants are in the pink of condition, showing the best of health, their glistening leaves shining in the bright sunlight.

Frank Kottrasch, the grower of the gardenias, is certainly a master with this plant, and upon inquiry as to why these flowers were so expensive, stated that if conditions were at their best the plants would average about 12 flowers each, and as the plants were set 12x15 inches apart and required a temperature of about 70 degrees it was easily seen that there is no danger of the gardenia ever becoming a cheap flower. This excellent crop comes to the Chicago market, where it is disposed of at the store of John Kruchten, the popular young wholesaler in the Atlas building, with the other high grade stock which he handles.

Color of Phlox.

ED. AMERICAN FLORIST:

I forward you blooms of a phlox of which I would like to know the name. It is a second early and grows 24 to 30 inches tall. Do young plants produce flowers of as good color as plants that are two years or older or are they likely to be lighter in color?

W. M.

The flowers were in a very wilted condition when received and therefore difficult to name. Young plants of phlox should come perfectly true to color if propagated by cuttings, being part of the same plant, although some kinds do vary at times, especially if root cuttings are used. Plants propagated early, set out in good soil should produce the best blooms the first year; this is the way exhibition spikes are often obtained, after this it is a question of plenty of manure, or, with older clumps, division and replanting in rich soil, preferably in a new situation if it is desired to keep the plants true to name, as small roots left in the ground will come up as plants. E. O. O.

HOUSE OF GARDENIAS AT DEERFIELD NURSERIES, DEERFIELD, ILL.

STORM IN CHICAGO, SEPTEMBER 18, 1911.

Section of Peter Reinberg's Plant the Ends Blown in and Roof Broken.

STORM IN CHICAGO, SEPTEMBER 18, 1911.

Six Houses of George Reinberg's Plant Blown Completely Down.

Storm at Chicago.

One of the severest thunder storms accompanied with the highest winds passed over the north section of Chicago on the early morning of Monday, September 18, breaking down and uprooting trees, blowing off the roofs of houses and damaging property in various ways. One of the worst centers of the storm, which seemed to be of cyclonic fury, was in the vicinity of the greenhouses of Peter and George Reinberg at Robey street and Balmoral avenue. Through a narrow stretch of about 400 feet width, passing diagonally over these two immense ranges comprising more than 2,000,000 feet of glass, the storm spent its fury leaving devastation beyond comprehension or description in its track. It completely wrecked ten houses of George Reinberg, blowing everything down; they actually looked as if the wind had formed a suction and lifted the houses bodily and then thrown them down, leaving nothing standing in the place, but here and there sash bars were standing perpendicular, and the beds of roses literally covered with broken glass and debris; many of the other houses were badly damaged, quantities of glass being broken. The storm then passed diagonally over the middle range of Peter Reinberg's plant. The ends of 15 houses were blown in, not a pane of glass being left; on eight the roofs were broken and nearly all the glass destroyed and in the other houses of this range large quantities of glass and sash bars were damaged. More or less glass throughout the entire range of nearly 100 houses was broken. The houses occupied by Charles Handel on Balmoral avenue just west of the George Reinberg range were completely destroyed, there being left standing only about 50 feet connected to the boiler house and in this the glass was all broken. The force of the wind was so strong the plate glass windows in the residence of George Reinberg were blown in, and the street was covered with broken glass for blocks.

On Monday more than 100 men were hard at work cleaning up the wreckage. The benches of roses and walks were covered with broken glass and broken sash bars, gutters thrown across the benches and steam pipes twisted through the rose bushes. The illustration gives but a meager idea of the damage done and the desolation accomplished by the storm. Foreman Collins of the Peter Reinberg plant stated that as yet they really did not know how many houses had been damaged and no figuring of the loss had been made. But the crops must be more or less damaged at present and if unfavorable weather follows with the houses so open the damage will be

heavy. It certainly looked as if the damage would approximate $50,000. Still if good weather ensues, and the houses are immediately repaired and rebuilt, as they no doubt will be, the loss may not be so large.

While the loss from the storm will be severe, yet it will not seriously affect the cut from these two immense ranges, for the houses damaged are but a small section of the entire

THE HAIL STORM AT WICHITA, KANS.

2300 Square Feet of Glass Destroyed in C. P. Mueller's Greenhouses.

plants, and the crops from the damaged houses were not in and the cut from this section was small at the present time. With rapid work the houses can be rebuilt in time to save most of the stock.

New Acalypha Sanderiana Hybrids.

It was predicted by professional horticulturists when Sander & Sons, of St. Albans, England, introduced Acalypha Sanderiana and A. Godseffiana that these two plants would become the subjects of hybridization, and many growers have been working upon these two plants but without accomplishing the desired results. After many vain efforts the problem has been solved by Mr. Sandhack who is well known among growers as a leading gardener. The firm of Teupel Bros., Quedlinburg, Germany, has secured the entire stock from the originator and is about to introduce the 11 varieties herewith illustrated and described by them as follows:

Camphanseniana — A very strong grower, five feet and higher, the leaves are large and vigorous, fresh green with cream edges. The flowers are very long and thick, of a greenish color, changing into yellow, a first-class decorative plant.

Poschingerae—Of strong growth and medium height, the leaves coppery-brown, flowers salmon-pink of medium length.

Sandhackiana—Of medium height, leaves strong and fleshy, faintly edged. The short flowers are pink and produced profusely. The plant flowers even when quite small.

Sandhackiana Superba—A very vigorous grower, five feet and higher, the leaves are beautiful, healthy and vigorous, the flowers are of medium length, noble, vivid rose and the plants bloom profusely. Valuable for decorations.

Beissneriana—A robust grower of medium height, the leaves being very large and strong, of dark green with light veining and cream edges; the flowers are of a tender green, changing into pink, and of medium length. Beautiful for decorations.

Johniana—A strong vigorous grower about five feet high, the leaves are plain green and the flowers very long and brownish, and are produced profusely. A large and effective decorative plant.

Wagneriana—A strong grower of medium height; the leaves are partly edged, partly plain; the flowers are spotted green and extraordinarily long. A remarkably beautiful plant.

Ravenae—Of short growth, with foliage of medium size, nicely edged with white; the flowers are whitish and of medium length; it flowers profusely even when a young plant.

Dorotheae—Dwarf, with leaves rather small. All green, the flowers delicate green, of medium length. A profuse bloomer and a good pot plant.

Teupleriana — Of medium height, with strong, small, odd-shaped leaves with a narrow margin, bearing large flowers of a vivid rose color. A very beautiful remarkable plant.

Kulbreyerae—Of short growth, with foliage green and hairy; the flowers are yellow, changing to rose. An effective plant.

A large show-house of Teupel Bros. contains at present about 1,000 vigorous, healthy specimen-plants. A sight into this house creates an overwhelming impression and only by personally viewing them can one get an idea of the beauty of the plants. Nothing can be prettier; for conservatories and as a house-plant these new hybrids are especially valuable, since they thrive remarkably well in dry air. They keep in the house for months in full beauty and can be used to advantage for the decoration of verandas, halls and stairways, also as an elegant table decoration.

Though they require great heat to start them they should not be classed among the stove-plants. In the first stages of growth plenty of air will keep them healthy. Their propagation and culture are perfectly easy. The stock-plants are kept cool and rather dry from October till December in order to ripen the wood. They are then transplanted and cut back in January and placed is a hothouse where they are sprayed frequently and soon sprout readily. The cuttings are made about as long as a finger and placed singly in small pots. These are placed in a warm frame where they will root in about three weeks. After this the plants require great heat and much light, so they will not grow too slender. They are transplanted two or three times as it may become necessary and hardened off gradually with a slight shading. The soil should be rich and not too light. The plants require plenty of water, but should not be sprayed after they begin flowering. To keep insects off fumigate with nicotine.

T.

ACALYPHA SANDERIANA HYBRIDS.

Grown at Teupel Bros., Quedlinburg, Germany.

Rain and Hail at Wichita, Kans.

The heaviest rain and hail storm ever experienced in Wichita, Kan., passed over the city September 6-7, when it rained incessantly for 12 hours and eight inches of water fell. The rain was accompanied with hail, some of the stones being of very large size, breaking much greenhouse glass. The accompanying illustrations show a field of asters of the branching variety raised by C. P. Mueller, when it first bloomed, but was ruined by the rain. The greenhouse which is illustrated, also the property of Mr. Mueller, had 2,300 square feet of glass broken by the hail. Stock of all kinds was badly damaged, the outside stock ruined, and the plants inside, such as chrysanthemums, roses and ferns, suffered severely.

ASTER BED OF C. P. MUELLER, WICHITA, KANS.

Scott's White Crego Aster.

Some of the finest asters that have been received in the Chicago flower market during the past season have been grown by the LaGrange Floral & Seed Co. at their grounds at LaGrange, Ill., and Manager Walter Scott has made a specialty of this crop. A recent visit to the place disclosed an exceptionally fine white crego aster, the result of Mr. Scott's cross-fertilization which we herewith illustrate. The plant shown was pot grown and bore six beautiful flowers of purest white and finest texture, the petals curving so that the flowers were extremely light and beautiful, notwithstanding their great size, for the individual blooms exceeded six inches in diameter. The plant was about three feet in height and the stems long and strong, carrying the blooms erect, and the foliage was large and of good health. This certainly seemed a great improvement on existing varieties and rivalled the chrysanthemum in size and beauty.

Feeding Chrysanthemums.

After taking the buds the question of giving the plants extra stimulation in the way of watering them with liquid manure comes to the front, and again the fact of the plant's growth having the development of the bud as its principal object, the feeding in any shape or form must be started out in moderation, gradually increasing the strength according to the plant's need. The varieties grown for commercial purposes, which have been treated to modern up-to-date conditions, generally have enough nourishment in the soil without it being necessary to apply liquid stimulation to any great extent beyond a weak application of cow manure one or two times. But first study the state of the soil in the beds and keep it to an even degree of moisture so that the plants can use up everything that it contains. It can readily be seen whether the plants are getting enough nourishment or not by examining the foliage, which, if it is a deep green color and stiff to the touch, then the plants have all the feed they can take care of, but should it be brittle, coarse and leathery, then they are getting more than is good for them and a return to clear water must be followed. Another point to consider is not to apply stimulation when the soil in the beds is dry, but first water with clear water, allowing the plants to stiffen themselves out a little before applying the manure.

The feeding of the exhibition stock is a different matter entirely. These were propagated early, grown along to the limit either in pots on in benches, and at this time have entirely used up anything in the shape of fertilizer that was put in the soil at the start, and have for a long time been dependent for their progress on the top dressings which have been given the soil from time to time, and they now require regular and continued feeding. A half bushel of cow manure to fifty gallons of water, allowing it to stand for three or four days, then apply through a Kinney pump about once a week is the method we follow, and accordingly as the buds expand we add a little Clay's fertilizer and towards the end of the feeding before the buds begin to show color a 4-inch pot of nitrate of soda to the barrel of water is given. But when to feed and how much to feed must depend entirely on how the plants have been treated, and every grower must study out these problems to his own satisfaction. It requires a whole season's study and care to bring a plant to perfection, and anyone undertaking it will have his plants well in hand by this time.

C. W. JOHNSON.

Violet Culture.

The time is now approaching when the single violet plants should be planted in their winter quarters. Much will depend however upon the section of the country. If single violets are planted too early they make a strong rank growth of foliage, which in many cases continues all winter and the plants bear but few flowers until spring, when there will be a burst of bloom, the beds being blue. But if the plants are allowed to get a little check outside and lose some of the foliage they will bloom much more freely all the winter. It is a very noticeable fact that Princess of Wales plants which are producing a heavy crop during the short days do not produce leaves enough to properly back up the bunches. In some cities at certain periods, some growers will

SCOTT'S WHITE CREGO ASTERS.

have a quantity of violets and no leaves, while others will have plenty of leaves and but few violets, with the result that the latter pick their leaves and tie them into bunches which they sell to the former. Where violets make an over-abundant leaf growth it is a good policy to remove many of the leaves, when the plants will often at once produce a crop of flowers.

The preparation of the soil also has much to do with a too luxuriant leaf growth. Single violets will grow in a much richer soil than the doubles, that is in a soil containing more manure, but both delight in a soil rich in humus. The manure must however be well rotted. The ash of the violet has a large percentage of potash, and if fresh manure is used or any manure strong in nitrogen a heavy leaf growth is very often the result and but few flowers. The soil must be light and friable and if leaf mold is obtainable, an addition of one-third of this will make a good soil for violet culture.

In lifting the plants in the field get a good ball of earth and protect the roots from sun and wind. Remove all the long runners—a sharp knife is the best tool—and cut the runner way back to where it starts from the plant. Do not lift too many plants at a time. If possible, it is better to have men setting the plants as fast as others are lifting. In planting spread the roots that are outside the ball and firm the soil well around the plant and water thoroughly. Do not set out too many plants before watering. When ten feet of bench has been set, stop and water it. The plants should not be allowed to wilt for they recover slowly and where a plant wilts for two or three days, as sometimes occurs with individual plants which do not take hold in the new soil, if there are plants left in the field, remove the wilted plant and set in another. The chances are that the plant has received a check at the roots and generally speaking, it is the plant whose root action is poor that shows the first sign of disease. While all the air possible should be given the plants, draughts should be avoided, as they tend to wilt the foliage.

The double violets should by this time be well established and making good growth. Keep the soil good and light and frequently stirred but care should be taken not to injure the roots. Any leaves that show decay are better removed, but under no circumstances disturb the plant in doing this or in picking the early violets. Much of the health and product will depend upon the plant having good root action at this time and becoming thoroughly established with new roots running into the soil. The low temperature at which the plants are grown during the cold months is not conducive to rapid root action, and the plants must make their roots now that are to carry them through the winter. It is always the plant with poor roots that first begins to show disease, so it is necessary that at this time of the year good active roots must be formed. The early flowers do not amount to much and they should be picked as soon as they show color, allowing the plant to husband its strength for the crop of flowers that will be borne later.

Scott's White Crego Aster.

White Fly on Asters.

ED. AMERICAN FLORIST:

We have a bench of asters in the greenhouse which is infested with a white louse or fly which sucks the life out of the plant. Near them are carnations and the flies are getting onto these. Can you inform us of any powder or poison that will exterminate them? F. B.

No doubt the fly which has infested the asters and carnations is the white fly, aleuroides nubifera, which is so destructive to fruit and vegetable growers. The only method of control is by the use of hydrocyanic acid gas. The method of fumigation by this gas in a greenhouse that is fairly tight is as follows: First, figure out accurately the number of cubic feet in the house, regardless of benches. For every 3500 cubic feet procure one ounce of cyanide of potassium and two ounces of sulphuric acid, to be placed in four ounces of water. A half-gallon jar will hold enough for 7,000 feet or twice the above amount. The jar should be of crockery or earthen ware and water tight and no metal jar can be used. In procuring the cyanide of potassium have it weighed out in one or two-ounce packages according to the size jar to be used. Do not handle the cyanide with the hands, for it is one of the most deadly poisons and if any should reach the hands wash them thoroughly and carefully. Place as many jars in the house as are necessary and close the ventilators. Place the water in the jars—four fluid ounces for each ounce of cyanide to be used—then add the sulphuric acid—half as much as the water. Start at the end of the house and walking rapidly from jar to jar drop the cyanide of potassium as done up in the papers, into the jars and get out as soon as possible. The gas is just as deadly to man as it is to insects—it will kill anything that breathes, so under no circumstances tarry over the jar or look into them after the cyanide has been dropped in. With a little practice one can fill the lungs

OUTING OF THE TUXEDO HORTICULTURAL SOCIETY AT HILLBORN, N. Y., AUGUST 23, 1911.

before dropping the first package of cyanide and not breathe again until out of the house. All the doors should be locked and labels posted designating the danger. No one should enter the house until it has been thoroughly aired by opening the side doors, and ventilators if easily reached. It is advisable to fumigate in the evening, keeping the house closed until morning. Where the house is badly infested it will require three or four fumigations about one week apart to entirely rid them of this pest. W.

Cincinnati.

BUSINESS FAIR.

Last week's business was, as a whole, only fair, while this week's holds out no better promise, although the opening was good. Large amounts of stock came in and only the best sold quickly. At times that even dragged somewhat. Fall openings this week and next are expected to consume a considerable number of blooms and tighten the market. Shipping business is brisk, while the local trade is the contrary. The retailers are finding a lack of funeral work. The average quality of everything arriving is good. Only now and then, owing to careless packing, perhaps, does a consignment arrive in very poor shape. Roses are in strong supply and are A1. As the winter season approaches the Killarneys arrive in better condition and are becoming more reliable each day. Mrs. Tafts and American Beauties are easily holding their own as good substantial flowers for the time of the year. Brides, Bridesmaids and Ivory, too, are good. The carnation supply increases steadily and the flowers are rapidly nearing the form of later in the year and are now an important factor in the market. Asters and gladioli begin to wane and in a fortnight more will be rendered conspicuous by their absence. Cosmos is in fair supply and finds a fairly good market. Easter lilies are in quantity and are of most excellent quality. A small amount of lily of the valley was offered the past fortnight and quickly taken up. The green goods supply is sufficient for requests.

NOTES.

Genial Frank Farney, representing M. Rice & Co., "just dropped in" last week and naturally "copped" everything in sight in the way of orders.

At the recent annual meeting of the Hyde Park Rose Co. Gus. Meier was re-elected president and Ben Sonnenberg was elected secretary and treasurer, in place of Albert Sunderbruch, who resigned and refused to accept a re-nomination and consequent re-election. H.

Baltimore.

STOCK IN ABUNDANCE.

The supply of cut flowers is increasing, with an unsatisfactory demand. Dahlias are in heavy supply, they being grown much more extensively, but considering the number in the market, find good sale. Asters are in abundance. There is some choice stock, but the bulk is sold at low prices. Gladioli are nearly done, and there is little demand for the stock to be had. Roses are in heavy supply and the demand for first-class stock is good. Carnations are improving, lilies are in fair supply, and chrysanthemums have made their appearance. Asparagus is not overplentiful. The demand for fern dishes is good.

NOTES.

At the last meeting of the Gardeners' and Florists' Club, Professor Symons addressed the members on the recent action of the Horticultural Society in regard to membership fee and admission to the show, which will be held in the Fifth Armory building during Maryland week.

Thomas Stevenson is reported as better. He has been suffering from blood poisoning caused by his tongue being pierced by a zinc glazing point while holding them in his mouth when glazing his greenhouse. The tongue became badly swollen and he could take but little nourishment.

The premium list of the Maryland State Horticultural Society show is issued and can be obtained by application to T. B. Symons, College Park.

The Meyer-Stisser Co. made an exhibit at the Prospect Park fair.

Isaac H. Moss has a fine lot of both double and single poinsettias.

Guy M. Strickler is growing some extra fine cyclamen and a fine lot of 2-inch Asparagus plumosus.

Mrs. James Glass is attending business at the stall in the market during her husband's illness.

Wiseman & Downs Co. is located at East Pratt street.

R. L. Graham and wife are at Atlantic City. J. L. T.

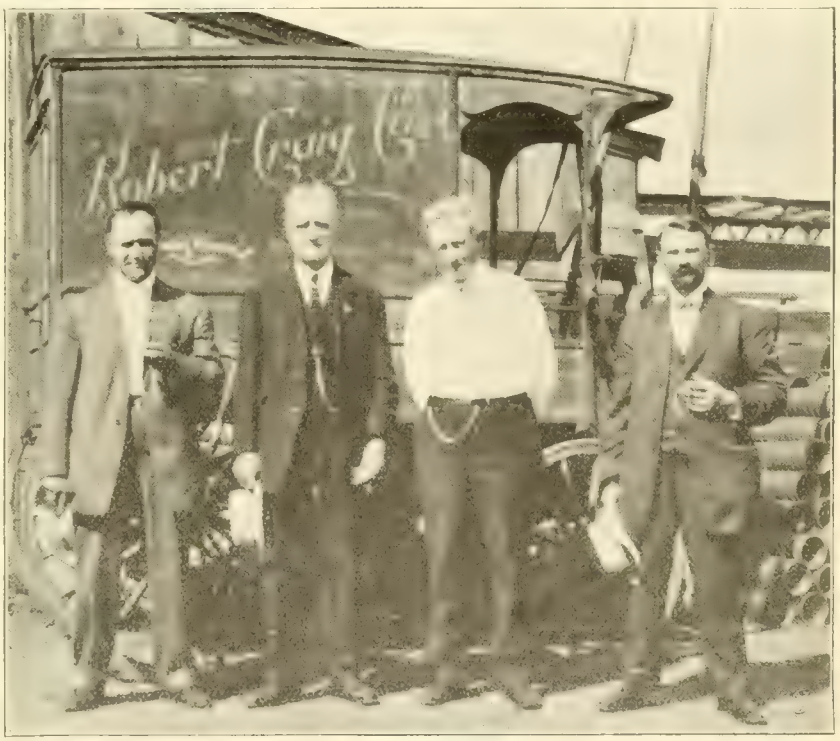
GREAT BARRINGTON, MASS.—Dolby Bros., who recently purchased the Dellert greenhouses, have bought two of the large greenhouses formerly owned by Frank G. Tefft, which they will move to the Humphrey street location. They are making many improvements on the property.

ZION CITY.—A visit to the Zion City Greenhouses, formerly known as nurseries, gives one an idea as to what extent chrysanthemums and carnations can be grown. These greenhouses are now in charge of C. A. Martin, who has had many years of experience in growing these flowers, and states that he finds a fine market for his flowers at Racine, Kenosha and Lake Forest, Ill.

Pittsburg.

A GLUT OF ASTERS.

There is plenty of all kinds of stock and also much kicking about business. Most everyone from the best store to the sparrows on the street are complaining about business and it seems as though the coming week will be better. The glut of asters is still with us and hangs on with grim determination. The quality of these is suffering a little. Most of the early gladioli are about over, and the late ones are arriving in good shape. Dahlias also came on with a rush and while the novelty of a change is on are selling well. American Beauties have eased up after a little tightness and other roses are little brothers to asters in point of quantity. Carnations are quite plentiful and good stems.



CLEVELANDERS ON A SIDE TRIP AFTER THE BALTIMORE CONVENTION.

From Left to Right: C. J. Graham, Adam Graham, Robert Craig, H. A. Hart.

C. H. Puhlman, of Carnegie, has installed his new truck. It will be used mostly between the store and greenhouses as there is a fine macadam road between these points.

Joseph Byerly, of Randolph & McClements, gave us a jolt this week. He married Miss Needhammer of East Liberty. They immediately left for Atlantic City.

John Weimer, of Verona, took a life partner September 18. Mr. Weimer had a chance to display his best as a floral artist in the decorations, and he made good.

The Pittsburg Cut Flower Co. has great difficulty in getting their flowers from their greenhouses on account of the floods up the valley.

Dahlias and very fine gladioli are seen at the McCallum Co. in about as much abundance as asters.

Mrs. Gus Ludwig has been very sick the past week, Mr. Ludwig not being able to be at the store.

John Orth recently attended the Councilmen's convention in the eastern part of the state.

The McKeesport Floral Co. are cutting good long-stemmed carnations.

E. C. Ludwig & Son took in the Brookville fair. J.

THE transactions of the Massachusetts Horticultural Society, Part 1, for the year 1911 have been issued. The volume includes the report of the inaugural meeting and the papers read during the first months of the year.

THE joint flower show of the American Rose Society and the American Carnation Society will be held at Detroit, Mich., January 10-12, 1912, according to the statement issued by Secretary Hammond of the American Rose Society.

THE thirty-sixth annual report of the Board of Commissioners of the Department of Parks of Boston is received. The book contains besides the report of Superintendent Pettigrew, suggestions by the commissioners, plans for the proposed zoological gardens at Franklin Park and a report by Olmsted Brothers of their inspection of the park system and their comments and suggestions.

A KILLING frost on September 13 is reported from Massachusetts which damaged crops to the value of thousands of dollars. According to the United States Weather Bureau it is the earliest date of a killing frost in Massachusetts and more than a month before the average date that a heavy frost occurs.

Western Dahlia and Gladiolus Society.

The adjourned meeting of the Western Dahlia and Gladiolus Society will be held at the store of A. Weigand & Sons, 1610 North Illinois street, Indianapolis, Ind., September 26, 1911. An exhibit of flowers will be held in conjunction with the meeting at the storerooms of the same firm, and all flowers forwarded to the above address will be received and staged. Those interested in growing dahlias and gladioli are invited to attend, become members, and send exhibits. Steps will be taken to make a grand show at Chicago in 1912. Arrangements have been made for hotel accommodations at The Dennison at $1.00 to $4.00 per day. Come and help make this meeting a success.

W. WATSON WOOLEN,
Chairman.

Boiler and Piping for Houses.

ED. AMERICAN FLORIST:

We have a range of four houses, joined at the gutters, with two outside walls, of the following dimensions: one house 24x200 feet, two 27x200 feet and one 42x200 feet. Ground benches of cement construction are used and carnations are to be grown in them. The houses are to be heated by steam, the boiler to be located on the ground level with automatic receiver pump to return the condensation. The lowest temperature outside is 15° below zero. What should be the size and horsepower of the boiler to heat this plant? What amount of radiating pipe should be installed in the several houses and how arranged? J. L. X.

Ohio.

If there is no glass in the side walls of the range of houses, a temperature of 50 to 55 degrees can be obtained by using a boiler rated at 60 horsepower, and the following amount of radiation: For the house 24x200 feet use two 2-inch mains on the plates and seven 1¼-inch return on the walls; in the houses 27x200 feet it will suffice to use two flows and eight returns, and in the house 42x200 feet there should be three flows and twelve returns. In the 42-foot house one of the flows could be upon the posts or suspended under the ridge and the return can be either on the sides of the beds or supported on the posts. L. R. T.

American Rose Society's Exhibition.

AT DETROIT, JANUARY 10-12, 1912.

At the convention of the S. A. F., held in the City of Baltimore a joint conference meeting of the American Rose Society, the American Carnation Society, and the National Sweet Pea Society of America was held. The subject under discussion was an early spring joint show of all these societies. It was decided to try and unite the carnations and the roses in one exhibition to be held January 10, 1912. At its regular meeting the American Rose Society ratified this action; the American Carnation Society having made a date later in the month, awaited final action by its board of directors which has been given. So that the dates of January 10-12, 1912, are fixed for the annual exhibition of the two societies to be held in the City of Detroit.

The Hon. Philip Breitmeyer has given assurance that everything possible will be done locally to make the exhibition a success. Detroit is a city of homes and gardens, and a large attendance is assured. The prize schedule of the American Rose Society will be prepared and published without delay. The two medals, one to the Minneapolis Rose Society, and one at the Annandale Rose Show, have been properly inscribed, cased and delivered. The gold medal voted to M. H. Walsh of Woods Hole, Mass., in recognition of work done by him in the development of the climbing rose, is under way. This is the second gold medal awarded in the history of the American Rose Society.

BENJAMIN HAMMOND, Secy.

BASSETT & WASHBURN,

Office and Store: 131 N. Wabash Ave., Chicago. Greenhouses: Hinsdale, Illinois

Chicago.

TRADE A LITTLE QUIET.

Asters everywhere of all grades, all colors and in all stages, the stores the past week have been laden with these fall flowers, but the quality is on the decline there are not many that can be called first class stock, the heavy rains of the last few weeks has played havoc with much of the outside stock and the asters especially have suffered greatly, so there is a large quantity of inferior grade. Gladioli also is beginning to show that the end of the season is approaching. While there are spikes of bloom to be had that are very good, yet much of the stock is short and the flowers small. Dahlias, however, are fine and in great assortment. Show, fancy, decorative, cactus and pompons all are to be had, and notwithstanding the heavy winds and rains the quality is good and some exceptionally fine blooms are to be had and they brighten up their surroundings wherever placed. The red hot pokers, Tritoma Phitzeri are also very showy and add greatly to the high colors in the windows or on the counters. The quality of the roses is exceedingly good and the supply of nearly all kinds is ample. There is a little shortage of short-stemmed American Beauties but there is a large supply of Richmonds and some fine grade stock can be purchased at low prices, so the shortage of the short American Beauties is not severely felt. The Killarneys are in great crop and White Killarney also is in liberal supply and the quality is fine with color of the best and stem and foliage good. Uncle John, Mrs. Jardine and Mrs. Marshall Field roses of exceptionally fine quality are seen at a few of the stores this week. Carnations are now coming in of excellent quality. It is really wonderful how they have improved during the last few weeks. Chrysanthemums are beginning to be more plentiful and they are rapidly taking a place in the market as daily arrivals. Beside Golden Glow there is now the two white varieties, Smith's Advance and October Frost, and there are some very fine blooms of all to be had. Violets are now showing themselves but not yet in any great quantity, nor are they up to winter standard as regards quality. The variety of orchids received is increasing. There are not many cattelayas; a few C. labiata are to be had, but there are Oncidium varicosum Rogersii, Dendrobium formosum and Vanda cærulea to be had. Lily of the valley is in good supply and of excellent quality. The high grade which this flower has maintained all the season is wonderful. Lilies are not overplentiful, but some very fine stock is obtainable. The coarser outside stock is still a feature on the market and the pretty Clematis paniculata is much used by many of the retailers. Autumn foliage has made its appearance and many of the windows are gaily decked with boughs of the red and yellow leaves. Trade generally is quiet and all are now prepared and looking forward to the good times coming.

NOTES.

Wendland & Keimel, the well known Killarney growers of Elmhurst, will commence building operations on their 11 new houses, 34x200 feet, this week. The new addition consisting of 90,000 square feet will be modern in every particular and of Foley's iron frame construction. H. C. Wendland, the senior member of this progressive firm, and family returned last week from a most enjoyable three months' visit in northern Germany. Mr. Wendland says that the good old German stein looks as of old but that the liquid it contains tastes even better than before.

Bassett & Washburn are cutting heavily in carnations, especially white, and some very good blooms are obtainable. A few of Smith's Advance chrysanthemums were seen at the store this week. The flower is very pleasing and is meeting with great favor with the trade. The city trade was very brisk on September 15 and 16 when the large cut of American Beauty roses was entirely sold out.

Poehlmann Bros. Co.'s stock is now arriving in excellent quality and in very large quantities. Roses of all varieties, carnations of every color, lily of the valley and choice orchids are seen on the counters this week. T. E. Waters, formerly with the A. L. Randall Co., Andersen Specialty Co. and D. D. Johnson Co., has accepted a position with this firm and is now looking after the correspondence.

Allie Zech, chairman of the sports committee, would be pleased to have all those who intend to bowl the coming season attend a meeting to be held at Zech & Mann's store Monday, September 25, at 6:00 p. m. The bowling season will open on October 4 at Bensinger's new alleys, West Monroe street.

Herman Schiller, president of the firm that bears his name, and Miss Pearl Yager will be married at the Schiller home on Thursday, September 28. The groom, one of our most promising young men, has the best wishes of his many friends for a safe voyage on the sea of matrimony.

A. T. Pyfer informs us that Miss Carter is now sole proprietor of the Carter Floral Co. of Joliet, having purchased her partners' interests. Miss Carter is very popular with the residents of that city and is building up a very nice trade.

EXTRA FINE HARRISII LILIES

We make these a specialty.
Can supply them all the Year.
Once tried you will have no other

W. H. Hart, Jr., of the Clinton Falls Nursery Co., Owatonna, Minn., accompanied by his father and George W. Hartman, his grower, visited several of the large greenhouse establishments in this vicinity this week. Mr. Hart's mission here was to get figures on material for three new houses which he intends to build this fall.

Wietor Bros.' American Beauty roses are of exceptionally good quality and arriving in very large quantities, mostly a long-stemmed grade. N. J. is particularly proud of the Mrs. Jardine roses that his firm is cutting and he has reasons to be, for they can be seen at this establishment in all their beauty.

Ed. Misiewicz, the Milwaukee avenue florist, was elected delegate to the national convention of the Polish Alliance Society which meets in St. Louis in October. M. B. Steczynski, Chicago avenue, president of the same organization, is a candidate for re-election.

H. Van Gelder, of Percy Jones', is supplying his customers with a choice grade of carnations. He expects to use the entire second floor of the building he now occupies to display the large cut of chrysanthemums that he will handle this season.

John Kruchten's chief offerings this week are a splendid grade of gardenias and October Frost and Golden Glow chrysanthemums. Henry Kruchten is back from his vacation and is again attending to his duties at the store.

Albert Lies, of Niles Center, is shipping Zech & Mann a very good grade of My Maryland and Killarney roses. Foreman Nye has the stock in good condition, especially the My Maryland roses which look very promising.

A. R. Gross, of Mt. Greenwood cemetery, and Thos. Wallace, of Rose Hill, attended the annual convention of the Association of American Cemetery Superintendents at Philadelphia last week.

Otto Kuehnel will leave to take charge of his nursery at Muskegon, Mich., as soon as he finds a suitable tenant for his greenhouse and dwelling at 6027 South Wood street.

D. F. Simonds, of the Ogden Floral Co., is back from a trip to the "Dells" in Wisconsin. Joe Beaver helped out at the store during his absence.

Michael Fink, of Kennicott Bros. Co., returned September 17 from a business trip to Detroit, Grand Rapids and other Michigan cities.

Chas. Zapfe, of the J. A. Budlong force, has returned from a most enjoyable visit in Windsor, Can., and northern Michigan cities.

Theodore Vogel resigned his position with the Kennicott Bros. Co. to enter the employ of the Alpha Floral Co.

Louis Turner, the well known florist of Kenosha, Wis., was in the city this week on business.

Emil Danz has returned from a few weeks' visit at Benton Harbor, Mich.

The E. C. Amling Co. received their first shipment of violets this week.

Frank Johnson, of the A. L. Randall Co., is away on a business trip.

Growers, Attention

Why not sell your own stock?
We have the finest location in the Chicago market and space enough to accommodate several growers selling their own stock.

ROSES, our selection, $3.00 per 100

WIETOR BROS., 162 N. Wabash Ave, CHICAGO.

F. C. Meyer, the genial foreman of the Geo. Wittbold Co.'s greenhouses on Buckingham place, has the sympathy of his many friends in the trade in the loss of his wife, whose death occurred on Monday, September 11. The funeral was held from the residence on Buckingham place on September 14 and was largely attended and the floral offerings were many and beautiful. Interment was at Waldheim cemetery.

The storm that passed over the city early Monday morning, leaving so much devastation in its path, badly wrecked a portion of the houses of Peter and George Reinberg, but while the damage was severe, yet it will not interfere with their normal cut of flowers, for a small proportion of these large establishments was injured. Preparations to repair the damaged houses are already in progress.

John J. Stuppy, of the Stuppy Floral Co., St. Joseph, Mo., was a welcome visitor this week. Mr. Stuppy is a member of the bowling team that will represent his city in the American Bowling Convention that will be held here in February and at which time he intends to have his team trim up the best five that the local Florists' club can produce.

George C. Weiland says that his firm has just finished putting in their heating system and they expect to have the fires going this week. The 12 new houses that were erected this season are all planted and the stock is doing nicely. Mr. Weiland is on the lookout for a first class store man to assist him with the large trade that he commands.

Joe Lapatine, better known as "Pete," and a familiar figure on the local market, died at the County Hospital on September 15 of consumption after a long, lingering illness. "Pete" was a general favorite with the trade and for the past several years could be seen grading American Beauty roses at the Wietor Bros. store.

W. L. Sullivan, of the Woodlawn Floral Shop, says, "that when the extensive improvements to his store in East Sixty-third street are completed he will have one of the prettiest stores on the east side." His brother Thomas is now assisting him in taking care of the splendid trade that they enjoy.

Gust. Rusch returned to his home in Milwaukee on September 16, after spending a few days among the growers in this vicinity. The firm, Gust Rusch & Co., of which he is a member, will open their new wholesale store this week in Milwaukee at 448 Milwaukee street.

Geo. M. Zingsheim, Hilliard, Florida, is in the city this week on business connected with the erection of a range of greenhouses in that city. He is making his headquarters at the Cornwall Land Co.'s office, 1536 First National Bank Bldg.

P. M. Brodbeck is shipping some good Killarney, White Killarney and My Maryland roses into this market. The general neatness of the establishment in Evanston is a fitting testimonial of the high grade stock he grows.

Chas. Erne resigned his position with E. H. Hunt on September 16, to go into the retail business for himself. His many friends wish him much success and hope that his trade will be a large and profitable one.

Manager Pyfer, of the Chicago Carnation Co., is going to mail "Tad" a carnation daffydil. Here it is! If Washington is a pretty carnation, is Princess Charming? Quick, Watson!! The sponge.

John Starrett had a large wedding decoration at the Hotel La Salle on September 16, which called for a large quantity of White Killarney roses, ferns and smilax.

Chas. W. McKellar is again showing a fine line of orchids and some excellent blooms of Cattleya labiata, Dendrobium phalænopsis, Oncidium and Vanda cœrulea can be seen at the store this week.

Miss H. V. Tonner is receiving some fancy Enchantress and White Enchantress carnations from N. K. Welter, the well known grower of Evanston.

The carnation plants in Scheiden & Schoos' greenhouses, at Evanston, are doing nicely, especially Beacon, which is in an excellent condition.

J. C. Craig, one of the oldest florists in the city, has drilled a new well and installed a modern heating system at his greenhouse in Hillside.

Vaughan & Sperry are showing an exceptionally fine grade of dahlias in addition to their large supply of all other choice stock.

"Schiller the Florist" will be one of the exhibitors at Illinois state fair at Springfield to be held September 29 to October 7.

Weiland & Risch have three new items on their list this year, gardenias, Prince de Bulgarie and Melody roses.

S. Fisher, of Fisher Bros., Evanston, is seriously ill in the St. Francis Hospital with typhoid fever.

A. D. Pierce, of the Home Nursery, Norwood, R. I., was in the city this week on a business trip.

Fred Lautenschlager, with Kroeschell Bros. Co., reports the boiler business very good.

W. P. Kyle, of Kyle & Foerster, is back from his vacation and is again seen at the store.

J. J. Kairins, representing Henry A. Dreer, Philadelphia, called on the trade here last week.

D. E. Freres, the popular young wholesaler, is serving on the jury for two weeks.

Alex Tarczali has opened a store at 691 Milwaukee avenue.

Notice To The Trade:

We desire to inform our customers and friends that although the storm of Monday morning, Sept.18, destroyed a small portion of our large range and broke large quantities of glass, yet it did not damage the plants. The houses that were damaged were in a section from which we were not yet cutting, so, fortunately, there will be no decrease in the supply and we shall be fully able to care for all our trade in the same able manner as heretofore. The proportion of damage which was done to our total area of 2,000,000 feet was very small, not large enough to effect the supply, so let your orders come on and we will take good care of you.

We are now cutting heavily in

Peter Reinberg,

30 E. Randolph St., CHICAGO.

The Chicago Flower Growers' Association has had a very good trade at their store the past month, considering the general dullness that has prevailed for some time past. Manager Frese is looking for trade to pick up soon and is prepared for whatever the busy season may bring. An exceptionally fine grade of wild smilax, greens and cut flowers of every description, are daily arrivals at this store.

E. H. Hunt is meeting with wonderful success with the sale of the Fisher Carnation Clip which has recently been placed on the market. The growers seem to like it very much and, as a result, this firm, who are the general agents, is filling many orders.

Frank Paszkiet, the popular young employe of the Wietor Bros.' force, and Miss Martha Robakowski will be married at the St. Mary's church on Wednesday, November 22. A reception, a good old-fashioned Polish affair, will be held at Muzkiewiczi Hall after the ceremony.

Schiller's branch store on Jackson boulevard and Ogden avenue is offered for sale.

Visitors:—Floyd Maxwell, Alva, Okla.; R. Karlstrom, representing W. A. Manda, Inc., South Orange, N. J.; Wm. P. Craig, of Robert Craig Co., and Paul Berkowitz, of H. Bayersdorfer & Co., Philadelphia, Pa.

MORRIS, ILL.—Ivend Krohn has been confined to his bed for the past 10 weeks with a severe attack of typhoid fever. To make conditions worse, his grower left him when he was most needed and when the stock demanded the most attention. Mr. Krohn is greatly in need of a man and would appreciate it if some grower who can do store work and is seeking a position would communicate with him immediately.

Lake Forest Horticultural Society.

The attendance at the flower show held by the Lake Forest Horticultural Society September 16 was very good and the quality of flowers and vegetables was excellent. The collection of vegetables exhibited by Cyrus H. McCormick, E. O. Orpet superintendent, was large in number and fine in quality and was awarded several first prizes. F. L. Swift, George Koppenhoefer superintendent, had the largest exhibit, consisting of vegetables, flowers, grapes, fruit and a collection of greenhouse plants; this exhibit attracted everyone's attention, the greenhouse grapes were most excellent. James O. Heyworth, Oliver Peterson superintendent, showed some very fine vegetables and annuals and won the first prize offered by the Calvert Floral Co. for 50 sprays of snapdragon, one color. Byron L. Smith, Albert H. Reupke superintendent, had the largest

entry in all classes and won the first prize on collection of vegetables and perennials. A. M. Day, O. Urdahl superintendent, had a fine collection of annuals and won several first prizes on individual exhibits. Ernest H. Hamill, Chris Peterson superintendent, exhibited among vegetables a fine basket of cut flowers. P. H. Coonley, W. Barnard superintendent, exhibited a fine collection of vegetables and won first prizes on various exhibits. D. M. Cummings, Knut Lafing superintendent, won first prize on vegetables on board 3x5 feet. B. A. Eckhardt, R. Seifert superintendent, exhibited very good vegetables and annuals. Carter J. Fitzhugh, Joe Grenlich gardener, had a fine exhibit of apples, 17 varieties, correctly named, closely followed by B. A. Eckhardt, Byron L. Smith and W. O. Lindley. Wm. O. Lindley, Max Tschau gardener, made a very good exhibit, considering that Mr. Tschau was one of the youngest gardeners among the exhibitors. As a whole the show was a grand success in every way and far superior to any before held. The public school exhibit was very fine, the children doing their best in wild flowers and annuals.

E. BOLLINGER, Sec'y.

Milwaukee.

Sack race—Clarence Retzlaff, Roy Currie.

NOTES.

Gust Rusch of the new firm of Gust Rusch & Co., wholesale florists, spent a few days in Chicago making preparations for the new place, which will be located at 448 Milwaukee street.

M. A. McKenny Co. are remodeling their store, which, no doubt, will make a fine appearance when all the changes have been made. They have been very busy during the last week.

J. M. Fox & Son expect to move to their new quarters, corner of Mason and Milwaukee streets, in the near future. They report business picking up in general.

N. Zwiefel and wife returned Sunday morning from an extended trip through the gold regions of Alaska. They state they have had a fine trip.

C. C. Pollworth Co. is moving into the new quarters, corner of Oneida and Market streets.

W. C. Zimmerman reports business picking up, especially funeral work.

Holton & Hunkel Co. are kept busy with both city and shipping business.

TRADE VERY STEADY.

Trade has been very steady this summer with the retailers, who have been kept unusually busy with funeral work and summer weddings. Cut flowers, although not of the best quality, are in great abundance and change hands rapidly. Now that the schools and theatres have reopened many of the florists are having their hands full supplying the demand for the various opening functions. The local growers have successfully transplanted their stock and some very fine houses of carnations are now to be seen.

Clark E. Adams is putting the finishing touches to his new greenhouse, 44x80 feet, which will be devoted chiefly to bedding plants and ferns. Mr. Adams is using the Garland trussed iron framework and the John C. Moninger Co. woodwork in the construction of this house.

The North Side Greenhouse is preparing to open a branch store at 912 Milwaukee avenue on or about October 1. John Bourgaise, the able proprietor, is now in Chicago looking after an icebox for his new addition.

The Asylum Avenue Greenhouses are erecting three new houses 20x80 feet which will be devoted to carnations, which will make five houses in all to be used for this flower.

L. C. Porter and wife are touring the east visiting many of their friends.

Place Your Regular Order for Cut Flowers with Us

AND WE WILL FILL IT WITH EXCEPTIONALLY FINE STOCK.

Our **American Beauties, Brides, Bridesmaids, Killarneys** and **Richmond Roses** and **Carnations, Lilies, Valley** and **Greens** are arriving in fine condition and in large quantities.

ZECH & MANN, WHOLESALE FLORISTS L. D. Phone, Central 3284 162 N. Wabash Ave. **Chicago**

M. B. Lassen is making arrangements to build a conservatory at 952 Washington avenue. This house will be of horseshoe shape and especially adapted to show the interior filled with cut flowers, palms and ferns, which he will handle extensively.

J. Benstead has disposed of his property and taken down his greenhouses at 721 Twelfth street. He expects to erect two up-to-date greenhouses near his new residence at 1113 Centre street.

R. E. Miller, of the Racine Floral Co., reports a very busy summer, especially due to his ability to obtain orders for and arrange some very fine designs.

Sam Pezzlito, formerly with L. C. Porter, has purchased the greenhouses of M. Hanson, 1603 Winslow avenue, where he will carry on a general retail business.

Mrs. J. L. Shaw, who succeeded Mrs. Pike, reports a good season.

Kenosha, Wis.

Business has been far below that of last year for the months of June, July and August, and had it not been for a funeral now and then the local florists' shops might just as well have been closed these three months. Of late things have brightened up somewhat which has placed an optimistic smile on the local flower merchant's face, who expect their harvest after the first few early frosts. Gladioli are very scarce here and what does reach the stores is quickly disposed of at good prices. Carnations are in good demand and bringing a corresponding price.

NOTES.

After the expiration of his present lease, P. M. Obertin, who succeeded W. H. Drake at 567 Chicago street, is contemplating building his own greenhouses and opening a retail store downtown. He reports a good cut flower and funeral business in the cool months and is kept busy in the dull summer days caring for the city's parks and cemetery for which he has had the contract for many years.

Henry Meyer, with the able assistance of his sons, is building up a steady and prosperous trade.

Louis Turner has taken his three sons, Louis, Jr., Walter and Allen into business and the firm is now known as Louis Turner & Sons.

NEW YORK—Butler's has rented the store at 18 East Forty-sixth street.

Headquarters for **ORCHIDS** and all Fancy Stock

CHAS. W. McKELLAR,

162 N. Wabash Avenue, CHICAGO.

Davenport, Ia.

Business, which has been in a sort of a trance for some two or three weeks past, is coming out of it, and the past week has given the florist a little encouragement. Asters are about done, as are gladioli and tuberoses. Roses are doing better and carnations are not half bad. Chrysanthemums have made their appearance; some fine Golden Glows are being shown. They will be our best friends from now on. Taking cuttings is now the chief diversion, and, of course, taking care of the bulbs as they arrive.

CLUB MEETING.

Amid the flash of lightning and the peal of thunder, the faithful members wended their way through ankle-deep water and mud to the home of Wm. Goos, at Bettendorf, Ia., to attend the regular monthly meet of the society—and no one had occasion to regret taking the chance of getting soaked (outside), for they were royally entertained. Picnic affairs were adjusted, and the members made glad by learning that all bills were paid and still a nice nest egg in the treasury. Violet culture was the evening's topic. Mr. Zimmerman, a member of the profession, was a visitor and brought with him a fine collection of dahlias and several extra fine ostrich plume celosias, which led to quite a talk on dahlia culture. After which a fine, hot supper was served by the hostess and her daughters. The club accepted the invitation of Ludwig Stapp of Rock Island to meet at his home October 12.

NOTES.

Harry Bills has just finished what is no doubt one of the finest heating plants in this part of the country, with all the newest wrinkles attached—flue blowers, water gauge whistle, steam regulator, and everything else to make the job of firing almost a Sunday school picnic. The boilers are large enough to keep the whole outside above freezing. Boiler house with plenty of light, so a lantern is a thing of the past in this place.

Davenport has bought eleven acres to add to five given by loyal citizens for another park. It is on the Mississippi river and will give a fine view of the three cities and a river view up and down for miles.

Henry Pauli has built a large, fine pot shed for the storage of a car load or more of pots. Henry says that hereafter if he wants a 2-inch pot he will know where to find it. Good idea.

Uncle John Temple is still at the hospital, but will return home some day this week. Everybody will be glad to see Uncle John back.

A great honor has been bestowed upon Wm. Knees of Moline. Grandpa Knees! from now on, if you please. Shake.

Wm. Goos has his new addition in working order and everything in good shape for winter. T. E.

Louisville, Ky.

The plant and flower exhibits at the Kentucky State Fair, held September 11-16, were much larger and better than in any previous year, and much credit should be given C. L. Brunson, of Paducah, the superintendent, and his assistant J. W. Wright, who had charge of this department. Nearly all the florists of the city entered exhibits for competition and the display of cut flowers and designs with the beautiful groups of plants made the building the most attractive of all on the grounds. The principal prize winners were Mrs. M. D. Reimers and Jacob Schultz, the former being awarded 18 blue and four red ribbons.

The tent of the Louisville Herald was the great beauty spot at the State Fair. It was decorated by F. Walker & Co. and John C. Ruysenaars executed a beautiful piece of work. Palms, vines and flowers were lavishly used in the decoration.

F. C. Haupt has remodeled his store front and has the prettiest and most up-to-date of any flower store in the city. In place of an awning he has a permanent canopy, the lower edge furnished with ornamental glass.

Richard Vincent, Jr., president-elect of the Society of American Florists, will visit Louisville soon and give an illustrated lecture on "Bulbs and Their Culture in Holland."

Mrs. C. B. Thompson has returned from her vacation at a Michigan summer resort. H. G. W.

St. Louis.

UNUSUALLY WARM WEATHER.

For the week the weather has been unusually warm for this time of the year and trade has suffered accordingly. Asters are shortening up. Quite a few chrysanthemums are seen, but it is a question whether these early varieties help business. Quite a large quantity of stock of inferior grade is arriving. American Beauties open up quickly this hot weather. Quite a number of fine longiflorum lilies are in and are selling well. Two large funerals last Tuesday and Wednesday helped considerably in using up the stock of flowers on hand.

NOTES.

The St. Louis Florists' Club met September 14, with 25 members present, and President John Connon opened up the meeting. The new officers were installed. Robert Windler, the president-elect, was absent upon his wedding tour, and the chair was occupied by Vice-President Frank Vennemann. Two new members were elected—Robert Windler of St. Louis and Mather Schonbergh of Belleville, Ill. Applications for membership were made by Chas. Young, son of J. Young, president of C. Young & Sons; J. E. Muldron, brother-in-law of Vice-President Vennemann, of Kirkwood, Mo., and George Madsen of Alton, Ill. Several important questions were laid over to the next meeting.

Those florists who are members of the St. Louis Florists' Club and who will attend the 25th anniversary of the Chicago Florists' Club may be assured of a hearty welcome, no matter how large the number that goes. They know how to do things in Chicago and they do it with but little talking.

Joe A. Wit has charge of the store of Robert J. Windler, who is away on his wedding tour. He is assisted by Mrs. Martha Hellwig, who has just returned from a lengthy vacation, visiting friends in Michigan.

A meeting of the executive board of the St. Louis Horticultural Society will be held next week to complete arrangements for the coming flower show and the entertainment of the Chrysanthemum Society of America.

A severe gale on the night of September 12 damaged the greenhouses of John F. Shields, 7227 Florissant avenue. The greenhouse was badly wrecked and the damage to plants and shrubs was about $2,000.

Leonard Kleinlain, 1443 Clinton street, was overcome by the heat September 14 and was taken to North End Dispensary, from which place he was removed to his home in a serious condition.

Mrs. M. M. Ayers had the family orders at two large funerals. She displayed some of the finest of work, and was ably assisted by Dave Gaddis, formerly of Chicago.

Ostertag Bros. had three wagon loads of flowers to send to the cemetery on the occasion of a large funeral.

OVERABUNDANCE OF ASTERS.

The same old story told in a different way. Two cart loads of asters sent to the hospitals. It did someone good. The sick people enjoyed them probably, but it made the grower sick enough to be carted to the same place when he read his tags for this week. Everyone is sick of asters, even the retailers are kicking. Every year one grower thinks the other will quit and then he can buy gilt-edged stock with the proceeds, but the reverse happens. How long they can keep this up depends on their patience and bank accounts. It's as big a job to make them stop as the old lady had when she tried to sweep back the ocean with a broom. We look at it from a grower's point of view; probably some others may have different ideas or views to which they have a perfect right. It's a good thing we were not all born in the same boat. Carnations are selling well and roses, with the exception of Richmond, are having a good call considering the market. The retailers report business good, somewhat better than usual. Society has begun to marry again and give in marriage shower bouquets are having quite a call, and lily of the valley enters largely in the make-up. The young bloods are buying American Beauties for their best girls and soul mates, whatever the latter word stands for—probably some of our scribes may put us wise, or some of our trade poets may write a poem about it. A severe frost September 13 extending from the city west killed some of the tender vegetation. Corn and beans were ruined; they looked as if they had been through a fire. Hydrangeas that were in their prime went the same way. Up beyond Springfield some three towns lost $65,000 worth of tobacco. Along the coast, we are informed, the growers escaped any damage. It has been a peculiar week. The rose men have had trouble keeping their houses anywhere near right, with the warm weather and rain we have had, accompanied with dark weather devoid of sunshine, they have had a hard time. They are waiting for a cool spell to help harden up the plants for the winter's work.

NOTES.

At Thos. F. Galvin's we saw some nice yellow poppies grown by Mark Aitken, Springfield, and we got a peep at the first violets of the season. Mr. Slattery says they have had considerable wedding work and will be busy with this work for the next two weeks.

It is reported that F. C. Houghton will open a retail store on Park street. The name of this street ought to be changed to Retail and Wholesale Row.

S. J. Goddard is sending in a novelty in a white marguerite. It is rather odd and ought to be a good seller.

MAC.

Dixon, Ill.

Louis Kuisel, who has been the grower for O. L. Baird the last seven years, has taken an interest in the greenhouse, beginning July 1. This gives Mr. Baird more time for the farm and dairy. Mr. Kuisel will grow mainly carnations and the plants are looking fine.

J. L. Hartwell, of Hartwell & Son Nursery Co., who has been in Blessing, Tex., for two years, is spending September at his old home.

C. H. Fallshorn is now located in his new store on First street. He has a fine place.

All hands are busy at the N. H. Long greenhouses on North Galena avenue.

B.

LEXINGTON, KY.—Miss Fannie D. White has broken ground for the erection of a house 30x125 feet at the new place, which will be devoted to roses. The stock in the houses is looking fine, especially the four houses of carnations and the 1,500 poinsettia plants.

Dahlias $1.50 to $3.00 per 100. Dorothy Peacock, the finest pink on the market, $5.00 per 100. The Dahlias we are offering are the choicest stock of the season. We know nothing better in Dahlias can be had at any price.

Special Notice. On and after Monday, September the 25th, we will be located in our new building, **N. W. Corner 12th and Race Sts.**

Philadelphia.

A NOTICEABLE IMPROVEMENT.

There is quite a noticeable improvement in the demand for flowers and plants the last week, being due to the increased population coming from the summer resorts and to quite a few important weddings. With this favorable condition there still remained a surplus as it seemed that the supply grows more rapidly than the demand, which condition will always continue as anything like a sustained active call in any one line means increased production as soon as the houses can be gotten together. Everything is improving rapidly in quality. American Beauties are now of good color with fine buds, My Maryland, Killarney and even the White Killarney are several shades brighter. Carnations are also much better. Asters are on the move, while dahlias are now at their height. The selection of varieties was never better; the heavy rains of early September helped them very much and the quality is the very best. Choice varieties are packed one layer in a box and selling this way in from 50 to 100 to a box, are only handled once when taken out for delivery at the store. The first white chrysanthemums have arrived and the next week will see them in all the windows. The seedsmen are very busy handling the large stocks of bulbs that are arriving, shipping them out in bulk to the larger buyers.

NOTES.

The monthly meeting and exhibition of the Pennsylvania Horticultural Society was held on Tuesday, September 12. The exhibition was open from 2 until 10 p. m. Dahlias were the feature with the W. Atlee Burpee & Co. and the Peacock Dahlia Farms as the principal exhibitors. The Burpee display was nicely staged, the background being of autumn foliage and eulalia grasses. The flowers were arranged in tall standards with small vases attached at intervals which when filled presented a very pretty effect like a huge pyramid bouquet. The varieties that attracted most attention were Burbank's Golden West, a very fine yellow Jack Rose; Mrs. R. Bailey, a fine crimson cactus; Ethel Maul, Master Carl, Twentieth Century, and quite a collection of fancy cactus, show and peony flowered types. Peacock's Dorothy Peacock would be a winner in any collection and was the best thing staged. Other choice sorts were Arabella's Lyndhurst, Mrs. J. Gardner Cassatt, a huge rose pink flower. William F. Bassett exhibited Bridesmaid, a fine pink, a semi-double with broad petals and a stout stem. This looks like a fine cut flower sort. Several seedlings looked promising. Choice vases of asters and a long table of outdoor flowers in vases gave variety and were much admired.

The growers are looking forward to a prosperous season and more houses are seen going up. Adolph Fahrenwald is finishing his twin house, 300 by 80 feet, the first crop in which will be chrysanthemums, already in good shape. The succeeding crop will be sweet peas. Mr. Fahrenwald being a great economist as well as a successful grower, anticipated the early crop by planting out the chrysanthemums and building the house around them.

Victor Groschens will be right in it with his two houses of American Beauties 42x500 and 50x500 feet. Cutting has already commenced. The Leo Niessen company handle them and also his large cut of Killarneys.

Edward Drown, another Hillside grower, makes a specialty of fern seed and grows all the standard varieties for this purpose, many growers depending on him for their supply.

Secretary Rust says the acceptances to the anniversary dinner are coming in lively and the affair bids fair to be as it should, a rousing success.

FLORISTS' CLUB MEETING.

The regular meeting was held September 11 and there was a large attendance, there being 85 members present with President John B. Nugent presiding. Frank H. Traendly, chairman of the transportation committee, made a detailed report of the expenses, etc., incurred on the recent trip of the delegates to the Baltimore convention. The bills were ordered paid and the committee discharged with thanks of the club. The secretary was instructed to convey the thanks of the club to the Baltimore Gardeners' and Florists' club for the courtesies extended while attending the convention at that city.

The resignation of S. C. Nash of Clifton, N. J., who had been one of the early members of the club, being elected in 1887, practically one of the founders, was accepted with deep regret. Several names were presented for membership.

Many members gave interesting talks on the recent convention in Baltimore which seems to have been one of the most interesting in the history of the Society of American Florists.

The actual business of the club will not be in real working order until the October meeting. The essay committee has provided an interesting programme for the remaining meetings of the year.

Charles H. Totty read the resolutions prepared on the death of John Birnie and Harry A. Bunyard read those on the death of the daughter of Charles Schenck. J. A. Shaw read the resolutions prepared on the death of Chas. Armitage.

Mr. Traendly gave a long talk on the National Flower Show and stated that a flower show committee was to be appointed by Presidest Asmus of the Society of American Florists. A resolution was passed inviting the S. A. F. through its committee to hold the National Flower Show in New York in 1913 at whatever season that committee may select.

Resolutions were passed thanking the S. A. F. and the Baltimore Gardeners' and Florists' Club for their kindness and courtesy extended on the death of John Birnie in the Belvidere Hotel at Baltimore, Md. The members were greatly disappointed in the absence of Patrick O'Mara, who recently returned from Europe, as they knew that a talk from him upon foreign shores would be most interesting.

C. W. Scott and Bert Chadwick are at work organizing a permanent bowling club to have regular meetings, arrange dues, etc., so that the club will be self supporting. More interest is being taken in bowling matters than there has been for many years and any member of the club interested should communicate with C. W. Scott, Yokohoma Nursery Co., 31 Barclay street, or with Bert Chadwick, care Vaughan's Seed Store, 25 Barclay street.

There was quite an exhibit of gladioli. John Lewis Childs, Floral Park, L. I., showed 33 vases of gladioli, among which worthy of special mention were Dawn, Cardinal, Aline and Scribe and was awarded cultural certificate. Frank Banning, Kinsman, O., showed Gladiolus Panama and 1900, red, and was awarded cultural certificate. Wm. Tricker, Madison, N. J., exhibited Vinca Minor, variegated, and was awarded the thanks of the club. E. P. Miller, Wading River, showed three vases gladioli and received the thanks of the club.

NOTES.

John Donaldson and wife have been in the White Mountains during the past three weeks and will return home October 1.

New England Dahlia Society.

The fourth annual exhibition of the New England Dahlia Society was held in the hall of the Massachusetts Horticultural Society September 15-16, and notwithstanding the frost which occurred during the week the display was large and beautiful. J. K. Alexander made a large exhibit consisting of 1,200 varieties besides a number of new seedlings. The Fottler, Fiske, Rawson Co. had a large display from their dahlia farm at Marblehead. Following are the awards:

Twelve named cactus dahlias, George L. Stillman, first; E. F. Dwyer, second.

Twenty-four named cactus dahlias, George L. Stillman, first; C. Lindvall & Co., second.

Twelve named decorative dahlias, W. D. Hathaway, first; C. Lindvall & Co., second.

Twelve show dahlias, George L. Stillman, first; Mrs. L. A. Towle, second; C. Lindvall & Co., third.

Twenty-four show dahlias, W. D. Hathaway, first; George L. Stillman, second.

Twelve named pompon dahlias, Geo. L. Stillman, first.

Vase of 18 red cactus, C. Lindvall & Co., first.

Seedling dahlias, awards of recognition to Henry R. Wirth, E. F. Dwyer.

First-class certificate for seedling dahlias, Mrs. L. A. Towle, Geo. B. Gill.

Burlington, Wis.

Business in this town has been and is very dull and were it not for out of town shipments the Burlington Floral Co. and its 40,000 square feet of glass would long since have been a thing of the past. A visit to these greenhouses gives one an idea of the rapid advancement in greenhouse construction. One may see two of the old houses, which were built by this company twenty years ago, along side of up-to-date houses of the Moninger and Dietsch types full of carnations, crysanthemums and roses, all ready to bloom.

ANTIOCH, ILL.—H. B. Pierce reports the nursery business in this vicinity as increasing yearly, finding a large call for shade trees among the many summer residents who spend the warm days on the many lakes.

OPENING SEPT. 30.

On the above date we will open our **Wholesale Cut Flower and Florists' Supply House.** We expect to carry all through their seasons a good supply of all cut flowers which will include a very select grade of **Violets, Beauties, Valley, White Lilacs, Sweet Peas, Orchids, etc.**, in fact our aim will be to supply any flower that is on the market. Our long experience in this business gives us a knowledge of where to obtain the kind and quality of flowers you want and with your co-operation Mr. Retailer, we will be able to give you the kind of service you desire. And to the out-of-town florists you will always find us ready to give you the same service and prompt shipments as though you were in Cleveland yourself.

If you should happen to be out of anything we will always try and buy it for you either in flowers, supplies or something out of the flower business.

Remember, when you are Dealing with Us you have two markets to draw from

because if a certain flower is scarce in Cleveland we will always call on Pittsburg to help us out; this will certainly be of some benefit to you. Also bear in mind we are also Importers, Manufacturers and Jobbers of FLORISTS' SUPPLIES. We can always supply your wants at lowest figures.

Wanted—Experienced young man; highest wages and good opportunity.

W. Q. POTTER, Manager.

Cleveland.

STOCK PLENTIFUL AND OF GOOD QUALITY.

Stock of all kinds is still very plentiful in most cases far exceeding the demand. Asters are still the most abundant flowers on the market, and some are very good, too, weather conditions being favorable, and aster bugs not so busy as in previous years. Roses are of exceptionally good quality, the cool weather toning them up nicely, as to color and stems. Carnations are arriving in large quantities and stock is good with fairly good length of stems. Easter lilies meet with a fair demand, Japanese lilies, both pink and white, are plentiful, gladioli still come in abundance, lily of the valley is in better demand and of first-class quality. Greens of all kinds are very abundant.

NOTES.

Anderson Bros. are opening a new store at the corner of Euclid and East Fifty-fifth street under the name of Penn Square Floral Co. This makes five stores within a block of East Fifty-fifth street on Euclid avenue doing a retail business.

Cards announcing the opening of the McCallum Company store on High avenue were received by all florists the past week. C. F. B.

Waukesha, Wis.

Business has been exceedingly dull this summer with no change in sight until the early frosts set in. Although the home of the famous Waukesha and White Rock waters which bring many summer visitors to this town, the local florists find practically no call for cut flowers, with but a small demand for pot plants. Outside of a few funerals and villa decorations business is at a standstill.

NOTES.

The Waukesha Floral Co., formerly known as Schneck & Bliese, is now the property of Mr. Bliese and under the capable management of Fred Hutchinson. They are growing some very fine chrysanthemums and carnations which will be ready for shipment in a few weeks.

Thos. Weaver & Sons have sold their greenhouses and properties to the Milwaukee Electric Railway and Light Co.

J. G. Robinson & Son, well-known violet growers of this vicinity, are the proud possessors of a goodly lot of violets.

S. Eales, finding the florist business too confining, is now resting in ease.

NEW HAVEN, CONN.—The first annual exhibition of the New Haven County Horticultural Society was held in Harmonie hall, September 13-14. The exhibits consisted of dahlias, asters, gladioli and perennials. A prominent feature was the Japanese garden of the Elm City Nursery Co., containing dwarf trees and evergreens secured from Mr. Coe in his recent visit to Japan.

The Seed Trade.

American Seed Trade Association.

Leonard H. Vaughan Chicago, President; Marshall H Duryea, New York, First Vice-President: Edgar Gregory, Marblehead, Mass., Second Vice President: C. E Kendel, Cleveland, O., Secretary and Treasurer.

Next annual convention, June, 1912.

VISITED CHICAGO: J. C. Robinson, Waterloo, Neb.; L. H. Archias, Sedalia, Mo., S. Y. Haines, Rockford, Ill.

PRESIDENT LEONARD H. VAUGHAN of the American Seed Trade Association left Chicago for the east September 18.

SEVEN dollars per bushel is said to be a price Michigan canning companies are willing to pay for Horsford's Market Garden seed peas of new crop.

CHICAGO.—Prices on the Board of Trade, September 20, for grass seed, were noted as follows: Timothy, $13 to $14.75 per 100 pounds.—Nothing has been heard from A. H. Goodwin or J. C. Vaughan about that Indiana fishing trip.

THE late James J. H. Gregory, of Marblehead, Mass., left the income of $1,000 to be paid for life to the mother of the first twins born in the town, the twins to live three months. Mrs. James Love qualified for the fund September 19, with twin sons, James and Edmond.

BALTIMORE, MD.—It was a great surprise to the trade to learn that the well known firm of S. L. Lamberd Co. would discontinue business and dissolve. Owing to the death of several large stockholders the business must be liquidated. This is a grand opportunity to obtain paying business with a large established trade, in an ideal location, with good railroad and boat facilities.

Hard Seeds.

A writer in the London Gardeners' Chronicle gives his experience of raising certain species of juniper seeds, which should be useful to many who have hard-coated seeds to deal with. His plan is to weigh out small lots of about one ounce each, place them in small muslin bags and dip in boiling water for periods of three, six and 10 seconds, the time being varied, we presume, according to the toughness of the seed coat. On being lifted from the boiling water the bags were at once plunged into water at 65° to cool, and sown immediately. Any longer period of immersion than ten seconds was found to be detrimental to the germination of the seed.—H. A.

United States Crop Conditions.

The conditions of the several crops of the country reported in the September issue of the Crop Reporter issued by the Department of Agriculture show a reduction in all the principal crops and a falling off from the average of 10 years. While the acreage was not materially reduced except in the case of tobacco, yet the crops in September show a much lower general average, owing in almost all cases to a lower yield per acre. Corn with an increased acreage shows a falling off of nine per cent in condition and four per cent in yield. Wheat, with an increased acreage of six per cent, declined 12 per cent in condition from general average and four per cent in yield. The other grains show like reductions. Potatoes, with a slight decrease in acreage, show a decrease of nearly 20 per cent in condition and a falling off of 22 per cent in yield. Apples are the only crop quoted that shows an advance in condition.

There is very general falling off in the condition of potatoes throughout the country, the reduction being very large in some states. In Missouri the percentage has fallen from 77 as a 10 year average to 20, and in Kansas from 71 to 19. Maine has a reduction of eight per cent and South Dakota a drop of 24 per cent from 82 to 58 per cent, but North Dakota shows a gain of two per cent, from 83 to 85. The north Atlantic states have nearly held their own, showing but small reductions. The south Atlantic states have but about half a crop. The north central east of Mississippi dropped 18 per cent and west of Mississippi 33 per cent. The southern central states fell off 28 per cent, while the western states have a crop equal to the 10 year average. This general reduction in the yield of the crop throughout the country is shown in the advanced value which has risen from 72.9 cents to 113.7 cents per bushel.

The onion crop is slightly reduced all over the land, the crop of the country being but 74.7 per cent compared with a full crop, the greatest falling off being in South Dakota, Nebraska and Kansas where the crop is but 55 per cent of normal. Connecticut also shows a reduction of 66 per cent of a full crop. The western states have an almost full crop, this year showing 91 per cent.

Tomatoes show a great variance but the crop is reduced, the percentage for the whole country being but 74 per cent of a full crop. The greatest loss is in the central states, Oklahoma having but 33 per cent and Kansas but 40 per cent of a full crop. The north Atlantic and western states have 84 and 86 per cent respectively of a full crop.

The reduction in cabbage is some larger than tomatoes, the greatest loss occuring in the south central and south Atlantic states, being 64.5 and 61.9 respectively, Oklahoma making the poorest showing, the crop being 24 per cent.

The condition of clover for seed is exceptionally good in the far western states, Montana having a full crop and the other states from 92 to 97 per cent except Colorado, which is 70 per cent. The central states show the greatest falling off. Minnesota has but 50 per cent, Missouri, 55; Pennsylvania, 55; West Virginia, 60; Virginia, 62; Ohio, 65, and the rest of the country about 70 per cent except Idaho, Washington, Oregon and California, which are from 92 to 97 per cent of a full crop.

Tulip Disease

At a meeting of the Royal Horticultural Society's Scientific Committee, Canon Fowler showed specimens of tulips with numerous brown patches upon their leaves. This disease appears to be caused by the Botrytis form of a species of Sclerotinia. When the attack is a bad one the fungus forms black sclerotia near and about the top of the bulbs, between them and in the soil, and by these the disease is continued into the next year. The spread of the disease may be checked by spraying with potassium sulphide, but it is well to completely remove and destroy badly diseased plants, to plant in fresh soil, and to discard any bulbs showing traces of the sclerotia (which vary in size from a pin's head to a pea) when planting is done in the autumn.—Journal of Horticulture.

Boddington's Quality Christmas and Winter-Flowering Sweet Peas

ALL true stocks of Winter-Flowering Sweet Peas will be scarce this season, some varieties are a total failure, owing to the exceptiona season in California this spring. Our advice to intending planters is to order early. Our stocks of Christmas-Flowering Sweet Peas have stood the test for years, and we can refer you to the largest growers of this increasing popular flower, as to the trueness and quality of our seed. earliness of blooming period, and strength and habit of plants.

The following varieties are the "best by test" and include Zvolanek's and our own introductions, grown for seed from selected stocks by leading California Growers and Specialists of Sweet Peas. Our output last year was nearly 6000 lbs. No kicks and plenty of testimonials as to quality, germination and trueness to type.

Winter-Flowering Sweet Peas at National Flower Show, Boston, March 25th to April 1st, 1911. Partly showing Mr. Wm. Sim's Exhibit, who won the majority of the leading prizes—seed almost exclusively supplied by "Boddington." Sim's Sweet Peas were one of the sensational Exhibits at this Grand Flower Show—average length of stem being twenty inches.

Boddington's Quality Winter-Flowering Sweet Peas

At the Exhibition and Convention of the National Sweet Pea Society of America, July 12th and 13th, 1910 we again won the C. C. Morse & Co.'s Silver Cup for the finest and best collection of Sweet Peas open to the trade only.

BODDINGTON'S EXTRA EARLY CHRISTMAS WHITE SNOWBIRD. An Exceptionally early Sweet Pea for indoor flowering—will bloom six weeks after sowing. Color clear white, upon long stems; habit fairly dwarf and of exceptionally free-flowering qualities. Without doubt, the finest early white for indoor planting. We sell one grower in Pennsylvania 35 lbs. of this variety every year, name on application. Oz., 30 cts.; ¼ lb., 85 cts.; ½ lb., $1.50; lb., $2.50.

BODDINGTON'S CHRISTMAS PINK. This is the earliest and most profitable and useful Sweet Pea in cultivation, as by sowing the seed under glass in latter part of August, flowers can be cut from Thanksgiving on during the winter months. Oz., 25 cts.; ¼ lb., 75 cts.; ½ lb., $1.25; lb., $2.00.

BODDINGTON'S CHRISTMAS WHITE. A companion to our Christmas Pink. Just as free and profuse a bloomer. Oz., 15 cts.; ¼ lb., 50 cts.; ½ lb., 85 cts.; lb., $1.50.

BODDINGTON'S CANARY. Similar to the above, but flowers of an exceptionally good yellow. Oz., 35 cts.; ¼ lb., $1.00; ½ lb., $1.75; lb., $3.00.

BODDINGTON'S FLAMINGO. Color scarlet; free-flowering and early. Oz., 50 cts.; ¼ lb., $1.50; ½ lb., $2.75; lb., $5.00.

Christmas Meteor. Scarlet; fine open red flower. Oz., 25 cts.; ¼ lb., 75 cts.; ½ lb., $1.25; lb., $2.00.

Christmas Captain. Blue and purple. Oz., 25 cts.; ¼ lb., 75 cts.; ½ lb., $1.25; lb., $2.00.

Florence Denzer. Pure white. Oz., 15 cts.; ¼ lb., 50 cts.; ½ lb., 85 cts.; lb., $1.50.

Greenbrook. White standard, slightly touched with lavender. Large orchid flowering variety. Oz., 25 cts.; ¼ lb., 75 cts.; ½ lb., $1.25; lb., $2.00.

Le Marquis. This is the same color as Princess of Wales, violet; has very large flowers. Oz., 25 cts.; ¼ lb., 75 cts.; ½ lb., $1.25; lb., $2.00.

Miss Helen M. Gould. White, open flower; standard lilac, marbled. Oz., 25 cts.; ¼ lb., 75 cts.; ½ lb., $1.25; lb., $2.00.

Miss Josey Reilly. Lilac; very large flowers. Oz., 25 cts.; ¼ lb., 75 cts.; ½ lb., $1.25; lb., $2.00.

Mrs. E. Wild. Carmine or dark pink. Oz., 25 cts.; ¼ lb., 75 cts.; ½ lb., $1.25; lb., $2.00.

Mrs. Alex Wallace. Very scarce. Lavender. Oz., 50 cts.; ¼ lb., $1.50; ½ lb., $2.25; lb., $4.00.

Mrs. William Sim. Salmon-pink. Crop failed.

Mrs. George Lewis. Large, pure white wavy flower. Oz., 25 cts.; ¼ lb., 75 cts.; ½ lb., $1.25; lb., $2.00.

Mrs. W. W. Smalley. Satiny pink. Oz., 35 cts.; ¼ lb., $1.00; ½ lb., $1.75; lb., $3.00.

Mrs. F. J. Delansky. Daybreak pink. Oz., 25 cts.; ¼ lb., 75 cts.; ½ lb., $1.25; lb., $2.00.

Mrs. Chas. H. Totty. Sky-blue; late. Oz., 25 cts.; ¼ lb., 75 cts.; ½ lb., $1.25; lb., $2.00.

Mrs. Zvolanek. Blue, variegated; good for variety. Oz., 50 cts.; ¼ lb., $1.50; ½ lb., $2.75; lb., $5.00.

Wallacea. Very fine lavender; a grand florists' variety. Oz., 50 cts.; ¼ lb., $1.50; ½ lb., $2.75; lb., $5.00.

Watchung. Pure white. Oz., 25 cts.; ¼ lb., 75 cts.; ½ lb., $2.00.

Wm. J. Stewart. Blue self. Oz., 25 cts.; ¼ lb., 75 cts.; ½ lb., $1.25; lb., $2.00.

All other varieties of Winter- and Summer-flowering Sweet Peas supplied. Write for quotations.

Market Gardeners

Vegetable Growers' Association of America.

B. L. Watts, State College, Pa. President; H. F. Hall, Boston, Mass., Vice-President; S. W. Severance, 508 Walker Building, Louisville, Ky., Secretary; M. L. Rustenik Cleveland, O., Treasurer. Annual meeting at Boston Mass., September 19-22, 1911.

Pickling Cucumbers.

Cucumbers for pickles are quite an important crop and in many localities could be made a profitable crop if properly handled. We refer to pickles sold direct to customer and not to the canning factory. The difference between the two is great, as the canning establishment will take the crop any time while the market will not. Thus cucumber pickles are generally slow sale up to September 1, and brisk after that date. There are many reasons for this: The people have a mistaken idea that canning in hot weather is risky; they hate to work in hot weather; they do not think of canning until cold weather reminds them of coming winter, or the family may be on an outing to the lakes, Atlantic City, or even in Europe. Thus a cooler weather sets in, the demand jumps up like a mushroom and, on the other hand, the supply shortens, as the cooler nights are unfavorable to cucumbers. Thus to make the money the grower must be a real grower and take advantage of every circumstance and bring in a late crop. This means young plants, careful picking, rich and well drained soil and ample water. A mistaken method is to produce slicing cucumbers and then expect pickles afterwards. The proper way is to plant purposely for pickles and to remove every fruit as fast as of proper size. We have many a time picked every day and we have also picked in the sweat of our brow and dumped the crop owing to depressed market, simply to hold the vines in thrift for the later trade.

We cut with sharp knives—allowing a small stem to each pickle. We use strong pails for carriers and handle carefully; shade the baskets in the field to prevent wilting; sort to exact sizes and then plunge into cold water, Count them by fives while fishing out of water, and mark the baskets carefully; protect again and send to market. They are sold by the hundred and there being little difference in price between the smallest and the largest one can easily see the smallest ones pay best if they are in demand.

Of late years we have had serious trouble with the wilt disease; we used to call it disease, but now we know better. There is a tiny worm at the ground line which punctures the stem to such an extent that the upward flow of sap is retarded, thus killing the plant. Whenever a field wilts when moisture is ample look for the borers. We find we can kill them with the standard tobacco extracts, pouring a small amount down each root. The proper way is prevention, which can be accomplished by protecting the roots with a handful of air slaked lime or tobacco dust as the bugs will not penetrate either to lay their eggs.

MARKETMAN.

Stamford Horticulturists.

The regular meeting of the Westchester and Fairfield Horticultural Society was held in Royal Arcanum hall, Stamford, Conn., September 8, President Stuart in the chair. The exhibition committee reported on the final schedule of fall shows and has provided many classes for both the large and small growers, with substantial prizes for both. Three honorary and three active members were elected and eight propositions accepted. The judges' report on exhibits was as follows: Display of dahlias by P. W. Popp and A. Whitlaw, cultural certificates; seedling orchid Laelia X Cattelya, Carrillo & Baldwin, vote of thanks; display of apples, Alex Geddes, highly commended. Mr. Popp gave an interesting talk on his experience with the culture of dahlias and from the size and quality of blooms exhibited he seems to have the proper method. Mr. Baldwin of Carrillo & Baldwin certainly keeps us posted on orchids, splendid plants in bloom and information regarding habits, etc.

John M. Brown, honorary member, entertained us with a review of his recent three months' trip through Great Britain. M. C. Ebel from Madison, N. J., was present and spoke of the coming convention of the National Association of Gardeners and the Morris County Horticultural Society exhibition this fall.

J. B. MCARDLE, Secretary.

Brampton, Ont.

Jack Frost is early this year, and has already dealt a killing blow to what remained of the terribly poor aster crops in this section. Notwithstanding the petty drawbacks incident to the season now coming to a close, the real summer weather has assisted splendidly to a fairly satisfactory state of affairs at the present juncture. The present month is brimful of activity, both outside and indoors, and florists from all parts of the Dominion visiting here whilst the Toronto Exhibition was being held, have found Brampton and its greenhouses well worthy of the little extra train journey involved.

NOTES.

The continued drought has been much felt, but the Dale Estate has been fortunate enough to keep going with the water forced from the lake which supplies the town. Efforts are still being made to locate further sources by boring, but up to the present have proved abortive. To guard against disagreeable possibilities a large dam is now being erected across the creek running through the fields below the greenhouses, and if the work is carried through as auspiciously as it has begun, the entire management will look forward to the long winter with fewer qualms. One of the most interesting features in connection with Canada's largest growing establishment is the up-to-date cold storage plant for the freezing of lily of the valley pips. The 2-foot thick walls are already completed, and another week will see the roof on. After that the lining and insulating and machinery will follow, but as it is to be a perfectly thorough undertaking we shall refrigerate the history of the completion of the job for interested readers until a more convenient season.

Unfortunate happenings are exceedingly rare in connection with the floral industries of this town, but Tuesday, September 12, one of the saddest events of the year took place. Wm. Mason, a carnation grower of experience, both in England and this country, returned to his work, having left his wife about to undergo a slight operation. Mrs. Mason had no fear whatever of the consequences and made light of the whole matter even up to the moment the doctor administered the ether. The heart action failed, and with tragic suddenness the husband had lost his wife and four young boys were bereft of their mother. Words are poor things and even flowers inadequate to express the sympathy the whole community feels for this family.

Both French and Dutch bulbs are late in arriving this fall, but we enjoy the pleasures of anticipation, since report has it that they are particularly good this year.

Niagara power has at last found its way here, and will be harnessed up for heating and freezing as well as for lighting purposes early next month.

The Nursery Trade

American Association of Nurserymen

J. H. Dayton, Painesville, O., President; W. H. Wyman, North Abington, Mass., Vice-President; John Hall, Rochester, N. Y., Sec'y.

Thirty seventh annual convention to be held at Boston, Mass., 1912.

Association of American Cemetery Supts.

TWENTY-FIFTH ANNUAL CONVENTION.

At the Continental Hotel, Ninth and Chestnut streets, in the city of Philadelphia, at 10 a. m. Tuesday, September 12, was opened the twenty-fifth or silver anniversary convention of the Association of American Cemetery Superintendents with President Grassau in the chair. There was a splendid attendance, over one hundred and fifty members and their ladies being present. The welcome by Mayor Reyburn was passed as he was not present nor did he send a representative. The address of President Grassau was first in order and proved very interesting and full of the work accomplished and the future welfare of the society and its members.

The report of the secretary and treasurer, Bellett Lawson, Jr., showed the work of the society, its membership and the funds of the association to be in good shape. Payments of dues were then made by the members after which the morning session was adjourned.

AFTERNOON SESSION.

The afternoon session was opened at two o'clock with a paper by Geo. W. Creesy of Salem, Mass., whose subject was "Cemeteries 25 Years Ago and Now." The essayist gave a very entertaining account of the situation at the time when the association was founded and the many improvements that had gradually taken place from that time until the present, claiming that the influences of the meetings held in the various parts of the country had been very educational and helped greatly to bring about the present day perfection as seen in the model cemeteries of the country. F. H. Rutherford of Hamilton, Ont., read a paper on "Re-arranging an Old Cemetery," which proved full of ideas and very interesting.

An adjournment was then taken and the members and their ladies boarded a special train at Broad street station for Fernwood. There were about 200 in the party. Arriving at Fernwood cemetery they made an inspection of the grounds and particularly of the large public mausoleum, which is intended as a permanent resting place for six hundred bodies, and at 5:30 p. m. the special was taken for the city.

SECOND DAYS' PROCEEDINGS.

The second days' proceedings consisted of an inspection of the nursery of Thomas Meehan & Sons, both at Germantown and Dreshertown. The Andorra nurseries, West Laurel Hill and Westminster cemeteries, the new Arsdley burial park and a ride through beautiful Fairmount park. This was one of the most enjoyable features of the convention. The entire party were taken in fifty-one automobiles, leaving the hotel at 9 a. m. The Quaker City Cab Co., who provided the machines, sent a mechanician and three extra autos to provide for accidents, and the entire party of over 200 made the long circuit, taking in all the points of interest without any delays of moment.

Lunch was served at the nurseries of Thomas Meehan & Sons, and also by the Andorra Nurseries, and everything possible was done by the committee and the various hosts at the places visited to add to the enjoyment of the visitors. That such a large body of people could be moved over such a varied and extensive territory without a delay of any kind is very creditable to the automobile company and shows also the great efficiency of the auto as a means of public conveyance.

In the evening the convention was called to order and the nomination of officers took place, after which John Dunn, C. E., made an address on "Road Construction and Maintenance." The speaker went into the matter thoroughly, showing the faults of the old methods and the great advantage of the modern and up-to-date manner in which the park and highway roads are now constructed. Thomas Wallis then read a paper on "Cemetery Records," which was full of ideas on this very interesting subject. Robert R. Binghurst made a very interesting address. Mr. Binghurst is a funeral director, one of the first in the land, and his very entertaining remarks were received with much interest and appreciation.

The Thursday morning session opened at 9:30 with a paper by Edward G. Carter on "Motor Trucks in the Cemetery." This was a very practical essay on the coming of the power wagon, which is making such rapid strides in displacing the horse as a factor in the movement or propulsion of all kinds of vehicles. The superintendent and landscape gardener of Fairmount park, Ogelsby Paul, delivered an address on "Landscape Work" and invited the delegates to be sure and visit Fairmount park, which he would guarantee them would be an object of great interest. Bellett Lawson, Jr., read a paper on "Community Mausoleums," a subject of great interest to all the members, as the erection of these large structures is becoming almost a necessity in the larger cemeteries, near large centers of population.

An early adjournment was taken so that the delegates could take the special train at 12 m. from the Baltimore & Ohio station at Twenty-fourth and Chestnut streets for Wilmington, Del. One hundred and ninety-six delegates, members with their ladies, took this trip and were met at the station in Wilmington and taken in autos through the beautiful park and Brandywine cemetery and to the Riverview cemetery, where an elaborate luncheon was served, after which a ride was taken through the business and residential section of the city. The special train brought the party to the city at 5:30 p. m., all thoroughly pleased with the day's outing and the great hospitality of their friends in Wilmington.

Friday passed another day of delightful outing. This time partly on the water. Leaving the hotel at 8:30 the party were taken by a special boat for a delightful trip on the Delaware to the H. A. Dreer nurseries at Riverton, N. J. On account of threatening weather it was determined to hold the afternoon or final session on the boat during the passage to Riverton. At this session a paper by R. K. Peirce on "Calcium Chlorides" was read, as was also an essay by T. H. Little on "Cemetery Advertising," which appeared to be of great interest to the members, as it contained practical ideas about this very uncertain and perplexing subject.

The election of officers resulted as follows:

John J. Stephens, Columbus, O., president.

H. M. Turner, St. Paul, Minn., vice-president.

Bellett Lawson, Jr., River Grove, Ill., secretary and treasurer.

It was voted to hold the next meeting in Milwaukee, Wis.

After an inspection of the extensive grounds and greenhouses, the boat was again taken and a luncheon served by the H. A. Dreer corporation, which kept the delegates busy until Bristol was reached, where the party boarded a train at 11:15 for Morrisville, where autos took them to the grounds of the W. H. Moon Co. After an inspection of the nursery grounds another lunch was partaken of, the Trenton delegates hastened them into the autos and out of Pennsylvania into New Jersey and the city of Trenton and after a pleasant trip showed them the beauties of Riverview and Greenwood cemeteries. The fair grounds were then visited where, as it was tea time, another meal was invitingly displayed. The boat, which had come up from Bristol, was now boarded and after a delightful twilight sail, the city was reached at 9 p. m. It is seventeen years since the convention was held in this city and many who were present then attended the convention just closed and cherished many pleasant memories of the event. All the delegates were loud in their praises of every feature of the meeting just closed, saying it was the best attended of any that has gone before. All sections of the country as well as Canada were represented. An interesting member was R. D. Boice, aged 84, of Genesee, Ill. In contrast to him was the youngest member, George M. Painter, Jr., aged 13 months, who was elected at this session and insisted on shaking hands all around. Mrs. E. T. Hay of Erie, Pa., was the only lady superintendent and Miss Daisy Blain, assistant superintendent of Elmwood cemetery of Detroit, has proved her ability by good service in this position.

The committee of arrangements, headed by Chairman George M. Painter of Westminster cemetery, worked indefatigably and the delegates say they never enjoyed such a round of trips and pleasure events as were tendered them at this convention. K.

SPECIAL PEONY OFFER

A Select List of the Best Varieties. Ten Acres of Peonies Grown.

Jackson & Perkins Co., Newark, New York

PEONIES It is not necessary to grow a thousand or even a hundred varieties to have a collection that will include everything really worth while. We have sifted out all the duplicates, eliminating those with defects of any kind, and present here an assortment covering the entire range of colors, extending over the blooming season, and representing the very best out of hundreds of varieties gotten together from specialists in France, England, Holland, Japan, and in this country. Strong divisions, with three to five good eyes.

	Per 100
Camille Calot, light rose	$10.00
Carnea Striata, pale flesh, shading to almost pure white	9.00
Charlemagne, creamy white, center light lilac, flesh shaded with chamois, late	20.00
Clarissa, rosy-pink; inner petals sulphur	6.00
Comte de Diesbach, dark red; early	10.00
Comte de Jussier, outer petals pink, inner yellowish	10.00
Comte de Nanteuil, very large and full; dark rose	8.00
Comte de Niepperg, dark rose-pink; large bloom	10.00
Comte d' Osmond, white with sulphurish center	20.00
Couronne d' Or, immense; very full, imbricated, ball shaped bloom; snowy white with yellowish stamens; fragrant; perfect as a cut flower sort; very late, coming in after all other long-stemmed whites are gone	20.00
Delachei, deep crimson-purple; one of the best dark peonies; late midseason	10.00
Dortens Coros, bright pink	6.00
Duchesse de Nemours, the Calot variety, cup-shaped, sulphur-white; late, and one of the best whites	20.00
Duke of Wellington, flowers fragrant, sulphur-white, large and well-formed; strong grower; stems long and firm; late midseason	20.00
Edulis Superba, soft pink; very early	10.00
Felix Crousse, brilliant, flaming red; far and away the best red; the popular color with florists; late midseason	25.00
Festiva Alba, ivory-white, with occasional crimson spots in center petals; ships well and stands cold storage excellently; late midseason	15.00
Festiva Maxima, the ideal early white for floral work; a well-nigh perfect peony	15.00
Floral Treasure, rich, soft pink	15.00
Francois Ortegat, semi-double; large purplish-crimson bloom, with brilliant golden yellow anthers; very striking	10.00
Gen. Cavaignac, lively lilac-pink, shaded clearer pink	8.00
Gloire de Douai, purplish scarlet-crimson with black reflex; late	10.00
Golden Harvest, very large blooms; blush guard petals; creamy-white center; midseason; one of the freest bloomers	15.00
Grandiflora Carnea Plena, very early; clear flesh-pink, shaded lilac; keeps well; ships well; desirable for cutting or landscape work	8.00
Grandiflora Rosea, light rose; outer petals very large, inner smaller and bunched; vigorous grower	8.00
Lady Bramwell, silvery pink; late midseason	10.00
Laius, outer petals white, inner sulphur, changing to white; medium size	12.00
La Tulipe, late; very large, full, shell-formed blooms, borne on long, erect stems; delicate rose, fading to creamy white; one of the best	30.00
La Sublime, crimson; fine, full, fragrant	12.00
Livingstone (true Crouse variety), soft rosy pink, silvery reflex, strong, long stems; best late pink	40.00
Louis Van Houtte (Delache), fine dark crimson; very double; strong	12.00
Meissonier, reddish purple, crimson center	50.00
Monsieur Barral, soft, clear pink; large and full; long stems	10.00
Monsieur Dupont, very large; ivory-white with carmine border in center petals; attractive; late midseason	20.00
M'lle. Marie Calot, satiny rose	10.00
M'lle. Rene Dessert, in clusters, soft lilac with silvery-violet reflex	20.00
Madame Crousse, one of the best whites; midseason	20.00
Madame Ladon, bright cherry pink	10.00
Madame Rose Rendatler, delicate rose	8.00
Nigricans, very late, brilliant, purplish-crimson	20.00
Nobilissima, bright, deep pink; good stems; lasts wonderfully	20.00
Officinalis Mutabilis Alba, earliest white	15.00
Officinalis Rosea, earliest light pink	15.00
Officinalis Rubra Pleno, the well known, very early, double crimson	12.00
Palmata, cut-leaved; single scarlet; earliest	25.00
Papaviflora, guard petals pure white; others yellowish; excellent	15.00
Phryne, blush white	8.00
Prince Imperial, brilliant purplish-scarlet; free bloomer; fine for massing in landscape work	12.00
Prolifera Tricolor, soft flesh, with center of golden yellow	8.00
Queen Victoria (Whitleyii). There are two well-known varieties of this name. This is the standard pure white market variety for storage	10.00
Richardson's Dorchester, salmon-pink, one of the very best late ones	25.00
Richardson's Grandiflora, flesh-pink, with lighter shades in center; fragrant; one of the largest peonies known; latest pink in bloom	50.00
Rosea Superba, brilliant, deep cerise-pink, blooms compact and perfectly formed; healthy growth; long stems; keeps well; late midseason	25.00
Rosea Plena Superba, very full flower; delicate pink and salmon	10.00
Tenuifolia, single, bright scarlet	25.00

THE BOOK OF GLADIOLUS

THE first authoritative book on this bulb ever printed in America, or possibly the world, issued April 1, 1911. This 120-page book, written by Matthew Crawford and Dr. Van Fleet, contains many chapters covering all sides of growing, propagating storing, etc., and also some pages of valuable cultural notes gathered from reliable sources. A necessity for both amateur and grower. The book is bound in cloth and fully illustrated.

GOOD ROSES SCARCE.

There is a decided scarcity of high grade rose stock in this market, a scarcity that would be far more felt if there was a demand for social affairs. But as the majority of the business is for funerals the shorter grades fill the bill fairly well. A few wedding orders and some school work have cleaned up the available good stock and it matters little what becomes of the short truck that some growers continue to unload at any old price they can get. Good carnations from indoors are also scarce but there are plenty of outdoor flowers. It must have been with a sigh of relief that the trade saw the last of the asters. Asters, more than most flowers, like a cool, moist growing season and the dry soil and atmosphere of southern California is not at all suited to them. We have not seen a really first-class market bunch of asters this season. There are many inquiries for chrysanthemums, but since the few early Golden Glow disappeared the stock of this variety has not been good and the others are not in yet. The grower will be lucky who gets in with a few good earlies before the deluge of outdoor flowers comes in. Sweet sultan has taken the place of asters and is useful for filling in funeral work. Fine Lilium rubrum and album, greenhouse grown, are in from the north, the flowers a little on the small side but clean and the foliage good. Lotus and water lilies are good and fairly plentiful. Orchids are scarce but Cattleya labiata will soon be at its best and the supply will be better. Business comes and goes, some days good and others poor, but taken as a whole it must be described as good for the season.

NOTES.

The water lily pond at E. D. Sturtevant's at Hollywood has been a grand treat of late for lovers of aquatics. All the best of the night and day flowering kinds have been represented and the size and color of the flowers have been grand. But perhaps the greatest attraction has been the immense flowers of Victoria Cruziana (Trickeri). These have been magnificent, and seen in the evening when fully developed, not easily forgotten. This species stands the cool nights of California better than V. regina and in addition has a strong fragrance reminiscent of pineapple. Other beautiful things at this noted garden are an immense sweetly-scented moon flower and some grand plumerias. Cocos flexuosa does splendidly here, too—fine, well-characterized specimens with beautiful "fronds" in the best of health.

At Wright's Flower Shop business has been excellent and the stock now coming from the new greenhouses at Gardena is of good color. The houses are now complete and form a compact businesslike plant of 90,000 square feet of glass. In addition to the old boiler which will be retained to raise steam for diffusing crude oil a new 200 h. p. boiler has been installed. In addition to roses, carnations and other ordinary stock a house has been planted to gardenias, which are in excellent shape. Owing to the difficulties found by the men in obtaining good boarding houses the firm will erect suitable quarters for the staff as soon as possible.

Eastern growers who only know the bougainvillea as a greenhouse plant would be interested in seeing the immerse "vines" here growing 30 to 40 feet high and simply covered with purple bracts. They are magnificent and are now at their best, though they flower practically all the year around. The only trouble is that they do not contrast well with other things and certainly not with the ubiquitous "geranium" which is often a blot on the landscape. H. R. R.

Heacock's Palms and Ferns

Home Grown, Strong, Clean and Well Established Describes our palms. No more words are necessary. "Our satisfied customers are our best advertisement." One customer who has been dealing with us for years sent us an order for $1,500 worth of palms without seeing them. Another whose order last year amounted to $700, gave us an order this year amounting to $1600. Send for our new booklet and give us a **trial order.** Lay in your stock of palms in **September** while you can have them shipped **by freight.** Our facilities for shipping are of the best. We ship by freight to every state in the **Union.** We have 40 per cent more glass this year; most of our glass is devoted to palms. We are particularly strong in the **larger sizes, (7, 9 and 12-in.)** We grow all our Kentias, above 6-in. sizes, in **cedar tubs** made especially for us, **avoiding breakage of pots** in shipments and **giving better satisfaction to our customers;** and while they cost us several times what pots would cost, we sell them for the same money; they are the neatest, lightest and best tub ever introduced painted green, with three electric welded wire hoops. We order these tubs by the carload.

Order Now for Fall Delivery. **When in Philadelphia, call and see our stock before placing your order. 20 minutes ride by rail; 50 trains each way every week day; Railway Station Jenkintown.**

All of the above plants are in fine condition, clean, thrifty and vigorous, guaranteed in every way. If on receiving any of the above plants, they are not as represented, they can be returned at once and your remittance will be refunded. It pays to buy good stock such as we grow. They will produce twice as many blooms as the cheaper grades offered. Up to Aug. 19th we shipped 97 orders and have not received one complaint. Cash with order.

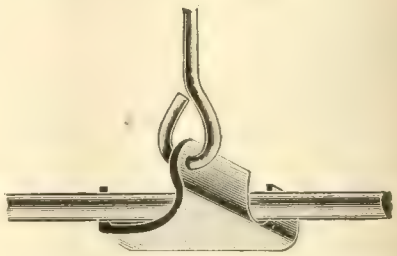
FISHER
Carnation Clips

All carnation growers know the trouble and cost of supporting carnation plants by the use of string. It is a long, weary job for two men and it must be done several times a season for the plants grow and need additional support. With the use of the Fisher clip the plants are better supported, the work is cut down to at least ¼ the labor and best of all the clips can be used this year and next, in fact as long as you grow carnations, and you do not have to buy string each season.



Fisher Clip.

Inexpensive Method to Support Carnation Plants.

Stretch No. 18 galvanized wire the length of the bench between each row of carnations, but let the two outside wires over the sides of the bench be of No. 10 galvanized wire. Then cut No. 18 galvanized wire into lengths the width of your bench and on each end fasten a Fisher Clip. Two men then can walk along each side of the bench and clip the cross wires on the No. 10 side wire with the Fisher Clip just as fast almost as they can walk. It is understood, of course, that each cross wire is put between each row of carnations, thus forming in connection with the length wires a square frame or square support for each plant.

As the plants grow and need more support a second set of wire stringers are run the full length of the bench between each row of the plants and over the first set 5 to 7 inches, as needed.

On this second set of length wires are clipped by the use of Fisher Clip cross wires of No. 18. If a third set of wires are necessary to support your plants they can be placed in the same manner. When your plants are ready to throw out the cross wires with clips in each end can be readily taken off the No. 10 side wires, bundled and put away until the next planting time comes and they will be found ready to use again.

The Fisher Clip is easily fastened to the side wires literally with a "grip of steel;" they will not slide, but are warranted to hold just where they are clipped in place. They are made of heavy sheet steel and are copper plated to prevent rusting and are time-savers, for two men working with these clips can string or support as many carnation plants in an hour as it takes two men five hours using the old white cotton stringing method. Also consider these clips in the light of an investment, for once purchased they will last as long as you grow carnations.

Here Is What It Will Cost.

Calculation, based on a bench 100 ft. long, 5 ft. wide, planted to carnations consisting of 6 rows with 120 plants to a row. This means:

500 ft. of No. 18 gal. wire for length wires, 3½ lbs. at 5½c per lb	$ .20
200 ft. of No. 10 gal. wire for side length wire, 10 lbs. at 3½c per lb	.35
600 ft. of No. 18 gal. wire for cross wire, 4 lbs. at 5½c per lb	.22
240 Fisher Clips, 2 for each row, 1 on each side of bench, at $5.00 per 1,000	1.20
Cost for first set of supports	$1.97

As three sets of wires and cross supports are generally used, the total cost of supports will not be over $6.00 to furnish ample support for 720 carnation plants, on a bench 100 ft. long by 5 ft. wide, and there will be no additional cost to you next year.

Compare This to the Cost of the Wire Ring Supports.

A three-ring support that will support two separate plants costs about $32.00 per 1,000, or $1.60 for 100 plants, or **$11.52** for a bench of 720 plants, against a cost of **$6.00** by using **Fisher Clips,** a saving of nearly 50 per cent, and you will find that supporting your plants with cross wires fastened by the Fisher Clips is more satisfactory than any other method.

PRICES.

Fisher Clips, per 100, 60c; per 1000, $5.00.

"The Best We Know of," Say the Manasquan, N. J., Florists, Newman & Legg, about

The Burnham

"Ten years ago we put up our first houses, and they were heated with boilers that we were told were just as good as any. Not having had any experience with boilers, we thought that going out several times during a cold night shaking fires down and very often spending a couple of hours fixing a grate that had broken during the shaking, was a part of the game. Today we know that this was one of the costly experiences in labor, cash, coal and temperature.

"At the present time we have five boilers, including the largest size Lord & Burnham; and if there is anything that will carry a more even temperature, with less labor, coal and expense, we would like to know of it.

"Of the Lord & Burnham boilers and heating system we can say—'We have them, and they are the best we know of.'"

Trouble Talk No. 6
Second Series

It principally concerns dampers—why so many are fooled by them while others damn them.

One bleak, raw day in March I was urging my horse along at a good clip trying to catch the 4:08 train from Madison to get home in time for hot biscuits and honey, when who should rush out from his work room and holler at me but Frank Bins. (He said I could tell you this, but mustn't use his right name.) Now Frank is a jolly good sort of a fellow, only he always thinks that anything he has is just a little better than anyone's else. And nine times out of ten it is. So I was prepared to hear a little extra blowing from him when he hollered out: "Come on in here while I show you a good boiler." The thought of those flaky biscuits of Mollie's, and the rich flavor of that old-fashioned buckwheat honey was almost too much for me; but if there really was a better boiler than ours in Frank's cellar, I wanted to see it. So I clambered out. "Here is where we have got your hide nailed to the barn door," said Frank. "Say, we have a boiler that is a hummer. Right now it is heating these houses easy as pie, and the damper is closed tight. It's got that old tea kettle you sold to me last year beaten to a standstill." To which I replied in a pathetic little kind of an all-in voice, "Show us the wonder."

The foreman and a couple of the helpers, wanting to see the fun, went down with us. Yes, there was the boiler and there was our boiler—both of them the same size. One was carrying 10 pounds of steam, with the damper closed, and the other, with the damper full open. That other boiler was our boiler. Things looked a bit black for me. And besides, there were those four grinning men. Something had to be done—so I began nosing around. First, I looked our boiler over carefully and then, opening the fire box door, I took the poker and jabbed it up between the sections and found there was no asbestos cement between any part of them directly over the fire. Then I crawled around to the back of the "Wonder Boiler" and unscrewed the smoke box plate cap and this was the shape of the damper plate I found:

It was all as plain as day to me then. That damper plate was about as wide open when closed as it was when open. It began to look as if Frank had been fooled. Our boiler with the asbestos left out between the sections had its fire travel completely spoiled and a large amount of the heat was being carried up the chimney by the forcing that was necessary to keep it up with the "Wonder." It's a marvel it kept up even at that. Leaving out that asbestos was the carelessness of Frank's men when they set the boiler up. They hadn't paid attention to the big blue card of set-up directions we sent with the boiler.

The first mild day they took the boiler down and put in the asbestos between each section. Ever since it has been giving that other boiler the liveliest hustle imaginable. For a week they measured the coal for each. Ours burned 300 lbs. less. (The next day Frank took our hide off the barn door.)

The moral is: If that boiler of ours didn't work entirely satisfactory for you last winter, we want to know it right now. The chances are it's not the boiler's fault. Let us come, at our expense, and find out where the fault is. Send your letters as usual to the

WHAT THE USERS SAY ABOUT KROESCHELL BOILERS

Greenhouse and Residence Heated by One Kroeschell Boiler.

Had different kinds of cast-iron boilers. I am assured that I can save about one-third fuel with your boiler, I started firing October 10th, and the fire never went out up to this time, May 12th, 1907. The boiler heats both my dwelling and greenhouses and gives the best of satisfaction. My dwelling is about 40 feet from the boiler. Can recommend your boiler to anybody. It is the only greenhouse boiler.

SUGGESTIONS FOR PLANT GROWERS.

Dahlias.

As the cool nights approach it pays to make preparations to cover the best varieties and protect them from the early frosts. Generally the first frosts are followed by two or three weeks of pleasant warm weather, when flowers are more or less scarce, the outside stock being cut down and the greenhouse stock not being yet in full crop, and a supply of dahlias is a great boon at such a time. See that the plants are properly labelled so when it comes to lifting time there will be no mistakes made. A good large label placed beside each root with the correct name is essential in growing this crop. This label can be tied on to the root when the clumps are lifted and all danger of misnaming obviated. Keep the plants securely tied to the stakes so that the high winds which are prevalent in the fall, cannot break the plants down or the branches off.

Begonia Gloire de Lorraine.

The plants of Begonia Gloire de Lorraine should now be making active growth, the bud shoots starting and the plants taking on shape. The earlier struck cuttings will now be fine plants in five and six-inch pots and will need a center stake to keep them erect. It is yet too early to tie the plants into shape but if any of the branches are long enough to hang over the edge of the pot, they should receive some support. These branches hanging over the edge of the pot are in the way when watering, and if the leaves get wet, it takes some time for them to dry off and many will become spotted and besides the branches grow crooked and are much harder to tie into place later on when this will have to be done. Keep the plants in a good warm house from this on until the buds begin to show color, when they can be placed in cooler quarters, but do not keep the house too close. Give a little ventilation every day possible. If kept too close and moist some of the foliage will spot and be ruined. Constant light fumigations will be necessary to keep down the green aphis. These plants do not like heavy fumigation, but light fumigation carried on frequently will keep the vermin in check and not damage the plants. These insects must be conquered before the plants begin to bloom or they will cover the young blooming shoots completely.

Cinerarias.

The cinerarias grown from seed sown in May and June will now be fine plants in 4-inch pots with good strong foliage. Later sowings will be in smaller pots according to the date at which they were started. If there is a demand for small plants in early spring in four or five-inch pots it is not too late to sow the seed, but such plants seldom bring more than 25 or 35 cents each and it hardly pays to carry a plant through the winter and sell it at that price. Give the plants in potting a rich friable soil with a good proportion of fibre for the last potting. Keep the plants in a cool temperature in good sunlight, well spaced apart, that they may be good and stocky. Never let up in fumigating these plants. Some growers buy tobacco stems and cover the bench with them, placing the plants upon the stems, and these are renewed as fast as the strength is spent. If the aphis get a good foothold on the under side of the rough leaves they are exceedingly difficult to dislodge.

Violets.

The single violets should be planted in the houses now as soon as the beds are ready. In lifting the plants in the field try to get a good ball of earth with the roots and avoid as much as possible the roots becoming dry. These roots are very soft and succulent and if they become too dry new roots will have to form and it will take some time for the plants to become established in their new quarters. The better way is not to try to handle too many plants at a time, but to lift a few and plant them out at once. When the plants are lifted all the runners should be removed and the plants as soon as set should be well watered. They should then be shaded during the

warm days, the length of time necessarily depending upon how quickly they will take hold in the new soil. Give the plants all the air possible but avoid draughts if possible until they begin to show growth.

Anemone Japonica.

One of the finest fall perennials is the Anemone Japonica, which is now in bloom, and if it is not included in the grower's stock at present, it should be procured. There is both white and pink but for general use the former is to be preferred. Where the plants are in bloom a framework should be built over them that heavy cloth may be drawn over and protect them from the early frosts, and they will bloom for some two or three weeks yet. If it is desired to increase the stock, a plant can be lifted and the roots cut into several pieces about an inch long and the pieces inserted in the propagating bench and they will root in about four weeks. Pot them up in 2½-inch pots and when the roots have spread into the soil the pots can be placed under a bench and run dry until spring, when they should be potted in 3-inch pots and grown on until all danger of frost is passed and then planted out.

A Cattleya With Lip-Like Sepals.

ED. AMERICAN FLORIST:

I am sending you a spike of Cattleya labiata bearing unusually colored flowers, the two lower sepals being marked somewhat like the lip and the upper one wide and shaped like a petal. I have several plants which produce these flowers every year so it can hardly be called a freak growth. Are such flowers common in this species?

L. A. F.

Flowers in which the lip character are repeated on the other segments of the flower are not unusual in orchids. In many cases these have been perpetuated and given special names as for instance in the well known Dendrobium nobile Cooksonianum. There is also a very beautiful form of Lælia purpurata in which the coloring of the lip is repeated on the petals. An illustration in THE AMERICAN FLORIST, issue of May 15, 1909, represents a cattleya with a similar peculiarity and many other cases of "tribabellia," as the late Professor Reichenbach called this condition, have occurred to our knowledge. Other changes from the normal in orchid flowers have been frequently noted. Soon after the introduction of the beautiful Cypripedium Charlesworthi we noted several flowers in which the lower sepal had the beautiful coloring and broad handsome form of the dorsal sepal making a most attractive and showy flower and many other such cases might be mentioned. These deviations from the normal can, however, hardly be called common and the present case is interesting and well worthy of note.

H. R. R.

NEW LONDON, CONN.—E. W. Clark arranged a beautiful floral decoration in the dining room of the Mohican at the banquet of the alumni of the Angle school, September 8.

HARTFORD, CONN.—William H. Olmstead, an employe at John Coombs, was operated upon for appendicitis at St. Francis hospital September 13. His condition was considered serious.

THE RETAIL TRADE

Conducted by Robt. Kift, Philadelphia, Pa.

Floral Suit Case.

Here is a fine attempt to meet with true artistic spirit the common desire for grotesque design work. The subject is a suit case made regulation size for the funeral of a traveling salesman. The flowers used were cattleyas, lily of the valley, white sweet peas and white carnations. Both sides of the design were finished alike and Geo. M. Geraghty, of Dunlops, Toronto, Ont., was the artist. Mr. Geraghty has no more partiality for this kind of work than any other florist endowed with good taste, but when it must be done, he tries to smooth out the rasping details and his customer's ideas usually materialize very presentably.

Summer Boarders.

One of the most perplexing questions that the retail florist, who has a greenhouse connected with his establishment, has to decide upon is the manner of handling the summer boarders. At this time of the year the customers who have spent the summer at the mountains, lakes and seashore are coming back to their residences and will want returned the plants which they left with the florist when they went away. Many know just what this means; some of the plants arrived two or three months ago in very good condition and are now, after being potted and cared for, good specimens for the residences, but alas! in the majority of cases this is not so, for they arrived in all stages of decrepitude, many fit only for the waste pile, and the owners think that they should now receive them in as good condition as when they were first purchased. This often results in much dissatisfaction and the occasional loss of a customer.

This question has so many ifs and ans attached to it that it requires considerable tact, an unruffled disposition and good business acumen to handle it successfully. Some growers state that it is a remunerative proposition, while others are very loud in denouncing boarders, saying that they not only lose money but that this part of the business is very unsatisfactory, and beside the house in which they are placed is a disgrace to the establishment and often jocularly called "the hospital." Another thing that must be considered is, if any of the plants become damaged, and with palms this sometimes occurs, these must all be replaced at any cost. In some states the florist who takes plants in this manner comes under the storage laws and in case of injury the plant must be made good, and often this necessitates the furnishing of a much better plant than the one that was sent in, but it must be of the same variety and size, regardless of the cost. It does not take but one or two cases of this kind to eat up all the profit from the boarding of a large number of plants. Many growers refuse absolutely to have anything whatever to do with summer boarders, and if they can hold their trade and insist on this policy, they certainly are to be congratulated, but the customers want their plants taken care of, and it is sometimes dangerous to have them find out that there is an accommodating competitor.

"Whatever is worth doing is worth doing well," is an old maxim and we might add, whatever is worth doing well should receive ample remuneration. This is probably the greatest stumbling block in the taking of summer boarders. Times have changed; it was but a few years ago when nearly all the greenhouses stood empty during the summer months. The hustling competition has caused the progressive growers to have a growing crop under their glass all the year round. Therefore the space is worth something and if occupied by some other person's stock they should be willing to pay for it. Under the older way anything that brought in a little money during the

BEGONIA GLOIRE DE LORRAINE.

As Grown by Samuel Murray, Kansas City, Mo.

FLORAL SUIT CASE.

summer was regarded as so much money found, but that day has gone by, and today greenhouses are made to pay their way during the summer months just as much as at any other time of the year.

Now many growers make a charge of so much a plant or name a lump sum for which the plants will be stored. These methods are bound to result disastrously. The plants should be charged for according to the space occupied, just the same as any other article stored, and the grower should know how much a square foot costs him per month to care for his house. Enough should be added to cover all dangers of loss, through either damage to the plants or the claims of unsatisfied customers. Many plants such as the nephrolepis ferns, if in bad condition or infested with insects, should be thrown away, for these plants can be grown in three to four months and the rental should be enough to pay for a new plant. Any labor expended on the plants should be charged to them. Frequently they are infested with insects and should be cleaned before they are placed in the houses, and many have to be potted and there should be a fixed price for this work according to the size of the pot.

If this matter is approached from a business standpoint rather than from that of its being a necessary evil, we believe that it can be made a paying part of the business. There is no reason why the grower should give care and space to a customer for nothing, and they would not expect it if it was presented to them in a proper light, but they have been accustomed to get it and have never looked into the matter, and as they pay a nominal sum, have no feeling of gratitude, for they think they have paid all just charges. If some other grower is willing to adhere to the gift or lump sum policy, let him do it, for it is just like any other branch of the business, if a dealer is willing to sell his products at less than cost, it is much better to let him try to do it, and not suffer one's self any such loss. It is no doubt as we said in opening this article, that this is a perplexing question and we would gladly like to hear the opinions of others who have had to meet and have solved this difficult problem.

WORCESTER, MASS.—The flower display at the exhibition of the Worcester County Horticultural Society held September 14 was large and beautiful. Well arranged baskets of flowers were a feature. George McWilliam of Whitinsville made a beautiful exhibit of dipladenias.

TITUSVILLE, PA.—L. J. Rowe has his new store on West Spring street nicely fitted. The store has been remodeled, painted and lighted with electricity. A small greenhouse has been built in the rear for showing plants. This will be used as the salesroom of the greenhouse plant on East Spruce street.

KALAMAZOO, MICH.—There were 50,000 visitors and the city was beautifully decorated September 21, when President Taft visited the city. The decorations at the banquet were elaborate, being in red, white and blue. G. Van Bochove & Bro. arranged the decorations, using large quantities of red roses, carnations and greens.

THE ROSE.

Roses in September.

September is one of the most trying months of the entire year on the indoor roses; as the weather is apt to be changeable throughout the whole month. There are many evenings that one finds the thermometer registering 75 degrees at 9 p. m. and at 4 a. m. it may be as low as 55 or 60 degrees, and the day previous at noon the temperature might have been around the 100-degree mark. By far the best thing to do to prevent mildew and the loss of good foliage resultant from sudden changes of temperature is to put the night fireman on the job by the middle of September. More damage will result from a sudden chill than the fireman's wages would amount to in weeks, perhaps months; for at times the roses receive such a set-back in the early fall that they fail to make up for it throughout the season. A few tons of coal used judiciously in the early fall will do wonders.

In the first place have the heating apparatus in good working order, have the boilers carefully cleaned and the coils looked after, taking out all crooks causing traps, examine the automatic air valves and all of the coil valves and pack them carefully. Start the fires the first cool day that comes along, usually a rainy day when the temperature drops to 50 or 60 degrees happens at any time now. This gives one the chance to test the

heating system, both old and new, as the case may be, and it also offers a fine opportunity to paint the single coil with sulphur. Have you a single pipe running through the rose houses especially for the use of the sulphuring? If not, the installation of the same will save many dollars. Very often one has to turn on a coil comprised of two or more pipes in order to get the sulphur fumes, and unless the theremometer registers 50 degrees outside the house will get entirely too close. Whereas with a one-inch pipe running independently one can use it.

Then the temperature is at the 60-degree mark on any cool night during the summer, and without a doubt a pound of sulphur applied to the steam pipes will do more good than half a bushel of sulphur in any form applied with the sulphur gun. It is quite essential though to have steam instead of hot water in order to fuse the sulphur properly. Hot water heating for general purposes is excellent, but for roses one must have steam, or both. In case the system should be all hot water then an auxiliary system should be put in. For a small plant a very small boiler can be used, fitted with a two-inch main with one-inch flows and returns circling each house. The Killarneys are especially inviting to mildew and where Richmond and other well-known varieties are to be found absolutely clean, the Killarney will be covered with mildew in the same house, and we never yet have seen strictly clean Killarney stock throughout the season, where hot water heating alone was used.

The carried over stocks should now be getting away nicely, that is the bench stock transferred to the solid beds handled quite early in the season. These plants should be looked over and all dead wood removed; also keep the short stemmed flowers off, cutting back to good eyes, allowing only long, clean-stemmed stock to come in now, the object being to build up a good strong growth and foliage. The early planted young stock should now be throwing some fairly good flowers, but at this time it is not good policy to let any semblance of a crop come in. Scatter the cut as much as possible by daily disbudding. Keep all of the plants tied, allowing them all the air possible between the rows. Syringe early, and even when firing lightly, keep a generous amount of air in the houses day or night. Avoid a close, stuffy atmosphere in the houses at all times. Keep all foliage affected with black spot cleaned off daily; a few minutes each day will help wonderfully devoted to the removal of spotted foliage. Solid beds as a rule can be cultivated long after the roots prevent working the soil over on the raised benches, and to repeat that cultivating as long as possible without injury to the surface roots is most important. E.

CINCINNATI, O.—Adam Fischer, formerly landscape gardener at the Soldiers' Home at Dayton, hung himself in his uncle's barn. He had been unable to work because of rheumatism which crippled his feet.

MINNEAPOLIS, MINN.—In the severe storm of September 10 the water ran into the cellar of the boiler house of Herman Bachman, at Fiftieth and Lyndale avenues, washed away the cement foundations and overturned the boilers.

THE DAHLIA.

THE Fottler, Fiske, Rawson Co., Boston, Mass., grows about 400 varieties of dahlias. This firm propagates dahlias very successfully from cuttings taken in the field during the summer. The cuttings are established in frames and grown on in 2-inch pots in the greenhouse until January, when the tubers are about the size of hazel nuts. The plants are then dried off and in March they are again started in the greenhouse and placed in the open when there is no longer danger of frost.

Practise Versus Theory.

Dahlia growers have not failed to notice how frequently their favorite theories are upset by the difference in seasons. When arguing from particular instances one is prone to think he has made certain discoveries, only to find out another year that they amount to nothing. For instance, you see that your neighbor trims and prunes his plants into perfect little trees, which produce splendid specimen blooms, while your plants are full of twiggy and sappy growth which can never bear a good flower. You think you have learned something and next year you imitate. You get a lot of woody, ugly growth, with some window-brush blooms of good quality, but these few and far between. Your neighbor fares no better, but on the other side of the fence another neighbor has a lot of beautiful plants, foliaged clear to the ground. "Your plants are all dried up!" he tells you. "My plan is to water thoroughly and let the foliage grow naturally, thereby shading the fine fibrous roots which hold the moisture." That sounds reasonable and is reasonable in a dry season, but dead wrong in a wet one, as you have good reason to know. But how can you or anyone tell in advance whether the season is to be wet or dry?

Take the matter of manuring. Certain ingredients mixed in the soil at planting time, like wood ashes, bone dust and sheep manure, in certain proportions, work out splendidly in a normal season, when there are rains just frequent enough to dissolve the plant food and feed it out slowly. But how about protracted wet weather? Then one gets rank, coarse growth, one-sided early blooms, and plants that soon show unmistakable signs of "playing out." These are the years when your tubers are monstrous in size and weight. If you had been growing for so many pounds of root crop you would have had great success, but, alas! you wanted flowers. Next summer you decide to withhold spring fertilizers and top-dress with cow manure just after the first buds begin to make a good show. You have seen some friend succeed wonderfully with this treatment. It is explained to you by one of the wise ones that this manure serves as a mulch as well as a food. Moreover, it comes just at the moment when the flower buds have formed and therefore feeds these buds and develops them into specimen blooms. The theory is good, but with you it doesn't work out. You seek advice from another. You ask him "How do you manage to get such fine flowers?" He tells you: "I don't water at all until late. By that

DAHLIA GOLDEN WEST.

time my plants are well along and look wiry and tough. Then I feed them with diluted nitrate of soda, applied twice a week."

The fact is, the longer one grows dahlias the less he knows about them. If merely exhibition blooms are sought for, it is perhaps a fact that rooted cuttings, strongly forced to a terminal bud, afford the sure way to success, though even that is disputed. But to get a good garden crop of flowers of more than average merit depends upon so many factors that, so far as the writer knows, there is no sure road to success. The best dahlia grower of my acquaintance, the one that uniformly, season after season, has a profusion of solid, perfect blooms, grows them in a level, sheltered place, having a heavy clay underneath. One very wet season this gentleman lost a great many fine plants on account of their getting wet feet. Another year he planted a lot of good plants in a dry hillside, and in this situation failed to make good. So the dahlia grower has too much heat and too little heat, too much wet and too little wet, too much feeding and too little feeding to contend against, and these factors are more or less complicated by early and late planting, and with good or bad luck in hitting the right weather conditions after the planting is done.

We have all of us read learned disquisitions from English growers of repute, telling what to do and what not to do; some of whose directions, if followed literally, would ruin all the dahlias in the United States. Their damp, cool island has one kind of climate; New England has quite another; the Rocky Mountains have another. The Pacific coast climate is different from either, but more analogous to British conditions than to ours. Yet from all these sources we get words of seeming wisdom, and sometimes we have dogmatized a little ourselves in the days when we thought we knew a whole lot about such things. But, after all, these uncertainties are a large part of the game and stimulate us by their very difficulty.—N. A. L. in the Dahlia News.

An Amateur Dahlia Grower.

What can be done in the cultivation of flowers if the love is instilled in a man may be seen in the garden of dahlias grown by H. H. Potter at Natick, Mass., which we illustrate, though the illustrations give but a faint idea of the excellence of the plants. Mr. Potter is manager of an express company and has made dahlias his hobby, having been interested in them for about 10 years, but about four years ago he began the culture of these flowers to much larger degree. He has now 130 varieties and every one is the picture of health. He attributes much of his success to pruning, digging, hoeing and mulching around the roots, and feeding with bone and wood ashes; and no finer lot of dahlias can be found in his vicinity. Mr. and Mrs. Potter spend all their available time in the garden, the love for the work seems to have been instilled in both and their success comes from the love of seeing them grow.

MAC.

STAMFORD, CONN.—Mrs. Albert Lindstrom has sold her florist business to H. E. Le Page.

DAHLIAS GROWN BY H. H. POTTER, NATICK, MASS.

Left to Right, Upper Row, Papa Charmet, Lucy Fawcett, Mrs. Roosevelt, Lower Row, Golden Medal, Acquisition, Bride.

Dahlia Golden West.

The exhibition of the American Dahlia Society was held at Horticultural hall, Philadelphia, Pa., September 19. W. Atlee Burpee & Co. were awarded a certificate of merit for collection of dahlias and also for novelties Golden West, Sebastopol and David Burpee. Golden West, which we illustrate, is a beautiful large yellow flower and a grand new variety, acknowledged by all growers to be undoubtedly the finest yellow in cultivation, regardless of type.

B.

Biennials.

The various biennials provide the garden with a grand display during the early summer. Considering the ease with which they may be raised and grown, it is rather surprising they are not made more use of. When raising the plants all that is necessary is a cold frame, wherein the pots or boxes may be placed for the seeds to germinate. If one has not the frame, and only a few plants are required, the seed pots may be placed in a box, and a few sheets of glass laid on the top will suffice. The seeds germinate with great freedom when kept fairly close and shaded. When the seedlings appear light and air may be gradually afforded until they have made sufficient roots to withstand full exposure. When the plants are large enough to handle they should be planted out into nursery beds, where they will make suitable plants for putting out the following autumn.

If one has several frames to spare for the work better results are obtained by pricking the seedlings out in them and growing them on for a time before planting in the nursery bed, says a writer in the Gardeners' Magazine. More labor is entailed by following the latter method, yet one is amply repaid for the extra trouble expended on the culture, for, to a great extent, success depends on a good start, and having a sturdy plant to put out in the first instance. An ordinary Canterbury bell will usually give one spike of flowers, but one that has been well grown from the commencement will, as a rule, throw several spikes. Sweet williams, too, respond readily to the better treatment, and finer plants are obtained. May is the most suitable month for sowing the seeds, and by

following the advised methods an excellent display can be obtained for the following year.

Foxgloves are indispensable for woodland planting, and excellent effects are obtained by boldly grouping the plants in large masses. They may also be planted to advantage amongst dwarf shrubs, where the flower spikes may tower above the shrubs. Ivery's Spotted is a good variety, and the gloxiniæflora strain is exceedingly pretty.

Canterbury bells adapt themselves to use in shrubbery borders, and also for grouping in the herbaceous borders. They are also useful as pot plants for conservatory decoration if potted in October.

Sweet williams have been largely improved, and are now very popular for bedding purposes. Pink Beauty is a charming variety, and makes a beautiful bed. The scarlet and crimson both give excellent effects, either in the herbaceous borders or in beds.

The evening primrose (Oenothera Lamarckian) is seen at its best when naturalized in the woodland or shrubberies; a bold group or two flowering amongst evergreen shrubs is very effective, the dark green foliage showing off the soft yellow blooms to great advantage. It lasts for some considerable time in flower.

Honesty (Lunaria biennis) is hardly good enough for the flower border, yet is very pretty when associated with other plants in the wild garden. It is somewhat neglected, yet quite worthy of a place where natural effects are aimed at.

Verbascum Chaixi, V. longifolium, V. olympicum, and V. phlomoides are extremely useful for naturalizing, and should be boldly grouped in the wild garden and woodland. The phœniceum hybrids make pretty groups in the herbaceous borders, and are quite suitable for the purpose. On warm soils the verbascums will prove perennial, but on wet ones it is advisable to treat them as biennials.

Papaver nudicaule, the Iceland poppy, owing to its habit of damping off in the winter, or dying out after flowering one season, should be raised annually to maintain a stock. It is one of the most beautiful and graceful of poppies we have, and extremely lasting in a cut state. For light vases, either in the drawing or dining-room, it is a lovely flower. A combination of yellow Iceland poppies and Campanula persicifolia for a drawing-room table is most effective, and highly appreciated. The improved strains contain a large variety of colors, and the plants adapt themselves well to rock garden culture; in fact, when planted in dry, sunny spots they live longer than in the open border.

Of the meconopsis perhaps the best are M. intergrifolia, M. Wallichi, M. aculata, and M. puniceus. In dealing with these the safest plan to follow is to gather and sow the seeds as soon as ripe, otherwise they often lie dormant for some considerable time.

AN AMATEUR'S DAHLIA GARDEN.

Lily Monstrosity.

The illustration herewith is from a photograph handed our representative by Fred A. Danker, of Albany, N. Y., and shows, according to Mr. Danker, the growth and bloom of a single bulb of Lilium speciosum magnificum received from Ralph M. Ward & Co., in a regular Japanese shipment of bulbs. The bulb in question is said to have been 10 inches in diameter.

[We have not seen this bulb, but presume it is a cluster of bulbous growths, such as sometimes occurs in bulbous plants, rather than a single fully developed bulb.—ED.]

Bougainvillea Laterita.

One of the commonest sights in California is a porch, well or fence covered with Bougainvillea glabra, B. Sanderiana, B. spectabilis or some other variety but a totally different and quite superior plant is the beautiful B. laterita which is not nearly as plentiful. There is at present an exceedingly fine specimen flowering with Wm. Haerle at the El Reah nurseries, Hollywood. Although only about four years planted this has almost covered the south wall of a large barn and must be nearly 20 feet high and as

LILY MONSTROSITY.

far through. It is simply a mass of flowers and although these have been described as a brick red this is a libel on a beautiful plant, for the color is really just as showy and bright as that of the poinsettia, but deeper. There is, in fact, a patch of poinsettias flowering just in front of the bougainvillea and neither suffers by contrast.

Had this plant been of the ordinary type, the clashing of color would be hideous, in fact, that is the worst fault of the bougainvillea, it contrasts with nothing else. But this fine species could be planted anywhere in the south where B. glabra flourishes and, seeing it in such close proximity to the poinsettias, naturally suggested Christmas plants. If this could be grown under glass in the east and flowered as freely as Mr. Haerle's plant, it would surely be a grand seller, either at Christmas or Easter. B. laterita is said to be difficult to propogate and this accounts for its scarcity. We are trying to root it in several different ways, but so far we are not sure of our ground so can say nothing about methods. Judging by appearances it could be propagated by "drawing out" hardened plants in spring and rooting the tender tips of the shoots in gentle heat.

Mr. Haerle is very proud of his specimen and rightly so, but there are many other choice and rare trees and shrubs in his garden. The Chinese lychee grows and fruits here regularly, a fine healthy plant some 10 feet or more high, being in the most robust health. Chinamen in the vicinity look on this garden as a Mecca and make pilgrimages to it regularly to see this tree when in flower or fruit. The nuts sent over from China are all cured so that the seeds will not grow. Philodendron pertusum (Monstera deliciosa) thrives well outside and several large plants are fruiting now. The East Indian mango (Mangifera Indica) also fruits here, Mr. Haerle bringing us ripe fruit to taste in the middle of February. There is also a beautiful specimen of the true coffee tree which also flowers and fruits here, the flowers being white and sweetly scented, the fruits the coffee berries of commerce. Mr. Haerle has also induced several varieties of camellia to flower freely, a rather difficult task, not because of their being tender, but owing to the dry atmosphere in summer. The guava (Psidium Guajava) also fruits freely for months on end to say nothing of some grand specimen orange trees on which the fruit is allowed to hang until it reaches maturity and oranges of such flavor as are never known in the east produced. So that altogether, outside of the greenhouses, Mr. Haerle's is a very interesting place to visit.

. F. KASTING AND J. C. VAUGHAN AT BALTIMORE.

"He Didn't Quite Get It On."

Long Distance Shipments.

Firms doing a large shipping business know well the importance of careful and skilful packing to insure the safe arrival at their destination of plants that have to travel anywhere from 500 to 2,000 or 3,000 miles. But there are many people more or less inexperienced in this end of the business who grow good stock and ship it out only to receive complaints one after the other of the condition in which it arrives. If there is one point more often overlooked than another in this connection we believe it to be the necessity for such firm packing that the plants cannot possibly move, root or branch, in the packing cases. Then, in their anxiety to prevent plants drying out enroute, many persons use too much water and ship the young stock too wet. Very wet plants, loosely packed form a combination that is bound to fail.

We believe there is no better way to pack plants of roses, chrysanthemums, carnations and similar stock for long distance travel than to turn them out of their pots, if they have been potted, and to ball the roots and pack in the usual way in newspaper. The heads of the plants should be perfectly dry and the roots just moist all through equally—not wet. A layer of excelsior should cover the bottom of the shipping case, which, for ordinary purposes, should not be more than 8 inches deep and about 18 inches square. Over this lay several thicknesses of newspaper very slightly damped and allow this to come up the sides and ends of the box. Then commence to pack the small plants in closely with the roots nearest the outside, the heads facing each other in the middle of the box. Fill quite to the rim of the box and then have eight or ten thicknesses or more of paper, enough when the lid is nailed down to press the whole mass absolutely air tight and firm, this being done by turning the papers from the sides and ends over the top of the plants. Stock packed this way will travel thousands of miles by express

AT THE BALTIMORE CONVENTION.

Harry Balsley's Funny Story.

or hundreds of miles by freight and come out of the cases as fresh and clean as when packed, but loosely packed wet plants will be shaken and bruised to a pulp long before they reach their journey's end. And, it is hardly necessary to add, such shipments should be packed immediately before train time and rushed out at once with large legible labels calling attention to the perishable nature of the stock and its liability to damage from extremes of temperature. GREENHOUSER.

Greenhouses on Wheels.

A greenhouse on wheels is certainly the most novel and interesting feature embodied in greenhouse construction to date in this country if not in the entire world. The realization of this new idea was reached September 25 by A. J. Stahelin, Redford, Mich., who, three years ago conceived the idea of prolonging the cutting season of carnations by leaving the field grown plants undisturbed in the field where grown till the blooming period. To accomplish this, a scheme was devised which to many seemed most daring and impracticable and involved an extraordinarily expensive greenhouse construction. It began with the laying of five lines of railroad rails across the lot to be covered, each 346 feet long. These rails—weight twenty-five pounds to the yard—were strongly anchored upon concrete piers placed three feet apart. The entire width of the ground plot is 140 feet. Four houses, each 35 feet wide by 173 long (the length being just half the entire length of the ground plot), were then erected upon wheels bearing upon the rails. The wheels—10 inches in diameter—are placed 8 feet 2¾ inches apart, each bearing directly under the gutter posts—8 feet high—which are fastened at the bottom to a channel iron running lengthwise with the house and to which the wheels are attached.

The houses are very strongly built. The Garland iron gutters and truss work being employed. A. Dietsch Co. furnished the bars and the Quaker City Machine Co. furnished the ventilating machines operating two lines of ventilators on each house at the ridge. The glass used is 24x26. The moving of the entire structure was attended with considerable concern and was witnessed Monday afternoon, September 25, by about forty florists of Detroit and Mount Clemens, and it is pleasant to relate that the great feat was accomplished easily and with the breaking of only one light of glass. Wire fence stretchers were used for the power, one being attached to the row of posts under each gutter and all being operated simulaneously, the four houses moved serenely along on the steel rails, hardly perceptible except by the slow revolution of the wheels. When the end of the rails was reached the certain practicability of the scheme was no longer a matter of doubt and Mr. Stahelin was heartily congratulated upon the consummation of his long cherished enterprise which, completed, sheltered 29,000 carnation plants—strong, clean and hearty and embracing the varieties Winsor, White and Pink Enchantress, Beacon, Winona, Sangamo, May Day, Gloriosa and Mrs. C. W. Ward. These will be allowed to bloom until the houses are moved back on the adjacent plot, where a similar number of plants will be growing next year and arranged in convenient beds, as they are this year—five feet wide with six walks in each house.

The Late J. T. Anthony.
First President Chicago Florists' Club.

Carnations growing inside upon the original earth, will, this winter be given the first test by Mr. Stahelin in this new venture, and if found satisfactory the cutting season with him can be prolonged for the entire year, the lifting and planting season as usually practiced being entirely eliminated. During the field growing period the Skinner system of watering is maintained, but in the greenhouses the hose will be used as with other growers. Mr. Stahelin has applied for patents on his greenhouse on wheels and his first year's experience with the new method will be closely watched by all growers of the "Divine flower." J. F. S.

Chicago Florists' Club.

Pursuant to a call of those interested in the convention of the Society of American Florists, which was to be held at Chicago in August, 1887, a well attended meeting of the florists of the city and vicinity was held November 3, 1886, and an organization was formed under the title of the Chicago Florists' Club, with the idea of forming a permanent social organization for members of the trade only. Fifty members were enrolled and the following officers elected: J. T. Anthony, president; R. J. Donavan, vice-president; G. L. Grant, secretary, and Joseph Curran, treasurer. Meetings were held during the winter and on February 17 the club held a ball and reception, at which the decorations were a great attraction and were highly praised by the daily press. Fully 700 people were present and the affair was a great financial and social success. The club then leased a very pleasant room at 189 Wabash avenue, and by April the membership had reached the 100 mark. In August the Society of American Florists held their convention in Chicago, and the club entertained the visitors during their stay in the city, and an excursion was made to South Park. In November a chrysanthemum show was held, which was very successful, despite the inclement weather and the excitement caused by the execution of the anarchists, which caused many people to remain in their homes.

At the second annual meeting the officers elected were as follows: F. F. Benthey, president; Andrew McAdams, vice-president; G. L. Grant, secretary; M. F. Gallagher, treasurer, and P. J. Hauswirth, financial secretary. At the next annual meeting a board of trustees was added to the elective officers, and those elected to fill the several positions were: James D. Raynolds, president; D. B. Fuller, vice-president; G. L. Grant, secretary; P. J. Hauswirth, financial secretary; Flint Kennicott, treasurer; Thomas Hopkinson, F. F. Benthey, A. McAdams, Joseph Curran and M. F. Gallagher, trustees. A banquet was held November 8 and a ball held February 8 in the First Regiment Armory, at which the decora-

GREENHOUSES ON WHEELS.
Visitors at A. J. Stahelin's, Redford, Mich., on Occasion of the Formal Opening.

tions rivaled those of the ball held two years previous.

The following year, 1889, the old board was re-elected and in the summer of 1890 a committee consisting of James D. Raynolds, J. C. Vaughan, F. F. Benthey, George Gardner and G. L. Grant was appointed to further horticultural interests at the World's Fair. During the World's Fair the club took an active interest in all matters pertaining to floriculture, and their committees served enciently.

The list of presidents of the club, with the years they served, is as follows, the deceased being indicated by an asterick:

*J. T. Anthony	1886
F. F. Benthey	1887
J. D. Raynolds	1888
J. D. Raynolds	1889
G. L. Grant	1890
G. L. Grant	1891
*P. J. Hauswirth	1892
*P. J. Hauswirth	1893
J. F. Kidwell	1894
G. L. Grant	1895
W. N. Rudd	1896
G. L. Grant	1897
*Edgar Sanders	1898
*James Hartshorn	1899
Andrew McAdams	1900
E. F. Winterson	1901
J. D. Thompson	1902
W. N. Rudd	1903
W. N. Rudd	1904
*P. J. Hauswirth	1905
H. N. Bruns	1906
Leonard Kill	1908
George Asmus	1909
George Asmus	1910
H. E. Philpott	1911

The date of installing the officers was changed from November to January in 1907, which accounts for that year not appearing in the list.

The club will celebrate the twenty-fifth anniversary of its organization next week, October 5, with a banquet at the Union Hotel, 68-72 West Randolph street.

A local trade organization of gardeners and nurserymen preceded the club, but survived only a short time.

The Heucheras.

Old hardy plantsmen love to dwell upon the changes they have seen in the plants of their choice, but I fancy they find few flowers which have increased in variety within a short time to a greater degree than the heucheras or alum roots, of which we have now a host indeed. These are excellent for cutting, their sprays or panicles of graceful flowers being admired when cut, and equally valuable in the garden when growing. A little talk about these, says a correspondent in the Gardeners' Magazine, may be of use and of interest when readers are pondering over the flowers they want to secure by and by.

Long ago Heuchera Richardsoni was valued for its bronzy-red leaves in spring, but its flowers are of little account, so that it has never been so popular as the others. The advent of H. sanguinea transformed the heucheras, however, and it is from the union of this and other species that the greater number of the newer kinds now to be mentioned derive their origin. Sanguinea is a lovely thing, with spikes of the most brilliant scarlet. Its drawback is its shyness of flowering in many gardens. Splendens is a fine variety of this, but is not so free in flowering as we would like. Walker's variety is the best of the trio, being finer in every respect, and also freer in flowering. Brizoides marked an advance, and resulted from the union of the two species already named. It has graceful spikes of elegant rosy flowers, small in size, but very useful in their loose spikes. Brizoides gracillima has pretty spikes of red flowers, and looks graceful anywhere. In H. micrantha we have a still more beautiful alum root, with many little rosy-white flowers on long stems two or three feet high. Its variety rosea has rosy-pink blooms on red stems, and is a most exquisite plant in every way.

When we come to the newer heucheras, whose parentage is a mixture of races, but mostly owing their fine characters to the species and hybrids already named, we are embarrassed by the choice. Brownsea Brush is among the latest of the novelties. It has hosts of sprays of the most elegant growth, having flowers whose shading seems to pass through blush to rose. Then Coralie, coral-tinted, bearing many fine panicles, and the graceful, lax-growing elegans are two good varieties, the latter being a soft rosy-red.

Heath-like in their appearance are the varieties known as ericoides, the first, ericoides itself, having charming pink sprays of flower; the variety alba has these of a pure white; and rosea is blush—a shade likely to be popular among these exquisite heucheras. Fantasy, blush-white, seems to have a future before it, because of the elegance of its inflorescence, but Flambeau is more likely to be sought after by those who like bigger blooms. It has bright red long-shaped flowers. Grenade has brighter flowers than Flambeau—more approaching scarlet-crimson than those of that variety; and the noble Pageant has fine bright crimson blooms. Madeline, dwarf in its growth, has blush-white flowers in plenty, and Pluie de Feu has these of a vivid fiery-red. Rosamunde, of the micrantha style, has proved itself a favorite. Its branching stems of fine coral-red flowers are glorious in the border, rising, as they do, from three to four feet high. Saladin may be said to be a deeper-colored sanguinea, and Snowflake, although pretty, appears to have been misnamed, as the flowers, white inside, are only gray on the exterior.

To conclude, we may name two good heucheras of much the same habit. These are Sancyl—between sanguinea and cylindrica—and Zabeliana. Both of these bloom twice in the year, and give good panicles of charming, long-shaped, bright pink flowers. The greater number of heucheras will thrive in any good soil, but some flower less freely than others, for some obscure reason. Yet a rich soil does not seem to cure this defect, and a good loam, with a little peat and leaf-

soil mixed, will generally answer well for these fine flowers, which are of high value for the ornament of the garden and the home.

Philadelphia Notes.

On last Monday the Leo Niesson Co. opened one of the largest and most perfectly appointed wholesale houses in the country in their new eight-story building, situated at the corner of Twelfth and Race streets and running north on Twelfth to Spring street. This gives the building light and air on three sides. The first floor and basement are occupied by the firm for the whole width and depth of the building, 58x100 feet. The store room is ideal, the ceiling being 22 feet in height and surrounded with windows instead of walls—at least it looks so from the inside. Of course, there are narrow walls between the windows, of light colored brick, which are an outside finish, the construction of the building, which is fireproof, being of iron and concrete. Down the center of the room are four large columns, around which are desks or tables on which are the telephones. There are eight trunk lines so arranged that by means of jackboards, with buttons at each column, that any of the 'phones can be used at that station. The various bells have different sounds and at each one as they ring an electric light is turned on and remains until the proper 'phone is taken off the hook, so that at a glance it is shown whether any calls are not answered. This system, original here, is said to be much better for instant service than a special operator. The tables are run at right angles to the Thirteenth street side or across the room, so as to present all aisles toward the ice box or cold storage room, which is built into the west or dark side of the building. This is a very complete structure, 17x60 feet, with 10 feet ceiling, divided into rooms 17x40 and 17x20, which can be kept at different degrees as desired. The insulation of walls, ceiling and floor are as perfect as possible, being composed of alternate layers of cork, cement and asphalt. By suitable shelves and tables every foot of the enclosure is utilized and an immense lot of stock, all easily accessible, can be stored in these rooms. The same space in the basement immediately underneath is also taken up with cold storage, half for immediate use and the balance for the keeping of galax and other stocks that are carried into the summer. The cold storage machinery for pumping the amonia is run by electricity. The basement, which has a ceiling 12 feet in height, makes an ideal storage place for many things used in the business. In a sub-cellar are two 90-horse power boilers, one of which furnishes the power for the elevators, freight and passenger, and the other is for reserve and will probably give power for the electric light, which they will furnish a little later. The office, 17x40, is in the gallery on the Race street side of the building and overlooks the main store room. Over the cold storage room is a large gallery, 17x60, for the storage of corrugated boxes, all sizes of which for florists' use are kept in stock. The seven floors above the store are for rent for manufacturing purposes. They are ideal for many branches of business, being very light. Already three are leased and occupied, and when all are rented the building will more than carry itself and become a first-class real estate investment.

C. Vanderbregger, with the Robert Craig Co., has just returned from a visit to the Fatherland. He says the chrysanthemums are grown in large quantities in Holland outside in beds, the plants being about six inches apart, trained to stout stakes, one flower to a plant, and this when it begins to show color was wrapped or covered with a waterproof paper bag. As the plant was tied to the stakes, the wind did not have much affect on the bag, and when ready the flower was found to be perfect and much better form than the unprotected ones. The late varieties are protected from the first frosts by sash until they are ready for the market. Mr. Vanderbreggen was much impressed by the new Adiantum Pride of Moordrecht, the same as is called the Glory fern in England. He says it was raised or came as a chance seedling to a florist and fern grower of Holland named Mr. Bier. It is an easy variety to grow as it does not require nearly as much heat or codding as does Adiantum Farleyense, which it resembles. The new growth is of quite a reddish tinge, and a

The Late Sebastian P. Fischer.

house which he saw at Mr. Bier's place, all in seven-inch pots, were a grand sight. He thinks it will be invaluable for cutting. He was surprised at the quantity of cut flowers that were offered on sale in the streets of Amsterdam, small push cart loads being seen on all prominent thoroughfares. There were also over 50 flower stores in the city, many of them quite pretentious. The city had only about 60,000 inhabitants and flowers appeared to have become a necessity.

K.

Cincinnati.

GOOD, ACTIVE DEMAND.

During the past few days there was a decided brightening in the market. Stock that a week ago went begging is now in active demand. Prices are getting back to where the growers undoubtedly want them. The buyers are hustling from place to place rather than wandering from one to another. The quality of the asters and gladioli and the advices from the shippers show that they are about done for this year. Rose offerings include American Beauties, Richmond, Killarneys, Mrs. Taft, Bride, Bridesmaid, Ivory, Kaiserin and My Maryland. All are good and are finding a market that is all that can be expected. The demand for pink is heavier than that for white. Carnations are meeting with a better request than for some time and have advanced slightly in price. With giganteum lilies at the last writing the question of the wholesalers was "where can I find a buyer for my lilies?" Now the statement of the buyer is "I've got to have so many to fill my orders." Some exceptionally fine lily of the valley is being offered. Cosmos meets with a steady call. The first chrysanthemums arrived the early part of this week and were cleaned up in less time than it takes to tell of it. The green goods market is good, much is used to fill orders from out of town.

NOTES.

The Bowling Club will begin its winter season early in October. The secretary, Chas. H. Hoffmeister, will mail notices thereof, giving time, place, etc., to all the old members and to any new ones who will telephone him a request for the same.

Covington Seed Co. sent the first early chrysanthemums in the market to C. E. Critchell. The latter has also been receiving excellent lilies from Wm. Speck.

Wm. Sunderbruch, president and manager of the Bloomhurst Floral Co., spent last Sunday in Dayton, O.

Milton Alexander, representing Lion & Co., New York, was a recent caller.

A. Sunderbruch Sons are cutting a crop of excellent lily of the valley.

C. E. Critchell made a flying trip to Oneida, Tenn., last week.

H.

Baltimore.

BUSINESS MORE ACTIVE.

With the change from summer to autumn the flower market has become more active. Dahlias are the popular flowers at present, the quality of the blooms is fine, surpassing that of other years. The stems are long and the size and color of the flowers are superb. The demand is very good and the prices steady. They are nicely packed and reach the retailer in fine condition. The supply of all stock is large, asters, roses, carnations, lilies, gladiolus and miscellaneous plants and flowers being received in abundance. Chrysanthemums of fairly good size are to be had and they sell fairly well.

NOTES.

The fifth annual dahlia show and harvest home bazar was opened at Cowentown Tuesday, September 26. This show has been made for the last few years by R. Vincent, Jr. & Sons of White Marsh as an educational feature and the ladies of the Ebenezer M. E. Church have held in conjunction the Harvest Home Bazar and Festival, serving a first-class country dinner and have raised money enough to build a parsonage. The Vincent firm this year exhibited 25,000 cut blooms of dahlias and including 200 varieties from the smallest pompon to the largest decorative, the delicate shades of the cactus, the solid flowers of the show types and the unique collarette dark red with white collar. The Gardeners' and Florists' Club of Baltimore visited the show September 27 and the Maryland Horticultural Society held a meeting during the week.

The forty acres of dahlias and the fifteen acres of cannas at the R. Vincent, Jr. & Sons Co. at White Marsh present a grand panorama of color. In the greenhouses is to be found the largest collection of geraniums in the country. The 300,000 square feet of glass being models of adaptibility for growing bedding plants which are shipped all over the country.

J. L. T.

Pittsburg.

BUSINESS PICKING UP.

The arrival of chrysanthemums, the promise of violets in a few days, the prominence of dahlias, and scarcity of asters, have given the market quite an autumn appearance, and indeed the change is quite welcome to all. Business is picking up right along, and should get better every day. Some of the first-class stores are already busy with decorations of good size.

NOTES.

At Schenley Park Foreman Jones is in work up to his sleeves, getting his chrysanthemum show ready. He has set such a high standard in his annual chrysanthemum show in previous years that it will keep him jumping to surpass them.

John Madden, who has had charge of the Randolph & McClements Penn avenue store, has left for the far west. M. F. Stafford is now in charge.

Sam Cape has had some orders during the past week which have used up quite a lot of smilax.

The McCallum Co. are handling lily of the valley that is all that could be desired.

The Pittsburgh Cut Flower Co. were the first on the market with yellow chrysanthemums.

Harry J. Ham has gone to the mountains for a few weeks' needed rest.

Howard Carney spent a few days visiting growers in the west. J.

Waukegan, Ill.

Although an older town than Chicago, Waukegan is far behind in a floral way. For cut flowers there is but a varied demand which at no time during the year is very large, funeral work being the local mainstay of this work there is always a plenty and manages to keep the florists well supplied with business. A few of the more enterprising florists have embraced the many opportunities offered by the summer residents along the North Shore and report having done quite a lot of decorative work for these pleasure seekers.

NOTES.

A walk through Theodore Meyer's greenhouses gives one an idea of the enterprising nature of the proprietor. Here everything can be found in ship shape order, all plants and flowers truly labeled and the stock as hardy and fine as can be found anywhere in the state. A good deal of credit is due Chas. Uhlik, in whose able charge Mr. Meyer has placed the houses, where can be seen fine specimens of carnations, chrysanthemums, ferns and palms.

M. P. Dilger is being kept very busy putting in a new cement bench which he claims is a big money and time-saver. He expects soon to supplant all his benches with those of cement construction.

With the assistance of his two sons, Harold and Claude, Lyman Potter is carrying on a high class trade, being kept especially busy with funeral work.

Mrs. John Larsen has added a new house to her establishment, 20x100 feet, erected by the Foley Manufacturing Co.

Nashville, Tenn.

The State Fair which has just closed brought little or no trade to the florists. No premiums were offered for any floral display of any kind and no effort was made to have one. The florists, however, have been quite busy and trade has been very good. The many young ladies' boarding schools in the city have opened and students coming from all parts of the Union, are more or less prone to flower buying, and the season is opening fairly successfully. Each and everyone of the florists have made extra prepartions for the coming trade. Flowers have been scarce and as yet are none too plenty, but a bountiful supply is promised in the near future.

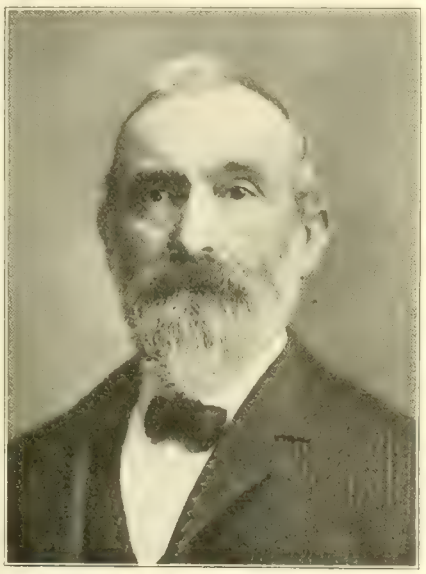
NOTES.

The Joy Floral Co. has enlarged its selling space, moving partitions back so as to give more room, where there was already a spacious store, to accommodate the rush of customers sometimes present. A fairly satisfactory cut of flowers is now being received, including American Beauty roses and orchids. Of the latter many beautiful blossoms are seen and there is a good demand for them.

L. H. Haury & Son, who have for years been doing a floral business with a stall in the market house, have rented a beautiful flower store in the Tulane Hotel building, the one formerly occupied by Geny Bros. They expect to occupy it by October 1 and have secured one of the most desirable locations in the city.

Geny Bros. have purchased another large McCray refrigerator and are getting in some good roses, Killarney, Richmond and American Beauty, with a good supply of Japanese and Easter lilies. They have had a fine trade and will begin cutting chrysanthemums next week.

McIntyre Bros. say flowers have been scarce here, but will be more abundant in a short while. Their chrysanthemums are coming in nicely and will be ready to cut very soon. M. C. D.



The Late John E. Haines.

Nassau County Horticultural Society.

The regular monthly meeting of the Nassau County Horticultural Society was held in Pembroke Hall Wednesday evening, September 13. President Trepess occupied the chair and there was a good number present. The judges appointed for the exhibits were Messrs. Cliff, Johnson and Marshall, and their decisions were as follows: Society prize—six ears of corn, F. Petrocia, first; 12 potatoes, H. Boetther, first; one melon, S. J. Trepess, first. Dish of peaches, E. Brown, honorable mention; Brussell sprouts, F. Petroccia, thanks of society. There were two applications for membership. Henry Gaut, in behalf of Mrs. H. L. Pratt, offered a silver cup as a special prize, and A. Walker, in behalf of R. C. Smith, offered a special prize of $15 for a vase of chrysanthemums, eight blooms, one variety, for the fall show. Mrs. H. L. Pratt and R. C. Smith were accorded a unanimous vote of thanks. G. N. Hoff of the Alphano Humus Co., gave a very interesting talk on humus and the benefits to be derived from its use on all soils and was accorded a very hearty vote of thanks for his courtesy and the explanatory answers to the questions which were asked. The exhibits for competition in October will be for three heads of celery, vase of cosmos and three heads of cabbage. The dahlia show was postponed until October 11. E. W.

OBITUARY.

Sebastian P. Fischer.

Sebastian P. Fischer, the younger member of the firm of Fischer Bros. of Evanston, died at the St. Francis Hospital Thursday, September 21, of typhoid fever, aged 27 years.

Mr. Fischer was born in Trier, Germany, and came to this country in childhood with his parents. He and his brother John worked with their father, F. C. Fischer, until 1892, when they established a business in Evanston at 614 Dempster street. He had been in good health until a short time ago, attending the last meeting of the Chicago Florists' Club of which he was a member. Two weeks ago he was in the market and complained of not feeling well and that night he was taken to the hospital and rapidly failed.

He was a member of the K. of C., C. O. O. F. and active member of the Evanston Commercial Men's Association and was very popular with his associates in business. The funeral was held from St. Mary's Church and the interment at Cavalry cemetery. The floral offerings were many and beautiful and included those from the Florists' Club, the wholesale flower houses and employes and friends. He is survived by his father, F. C. Fischer, his brother John and sister Polly.

John E. Haines.

John E. Haines, the well known florist and originator of carnations, died at his home in Bethlehem, Pa., September 11, of a complication of diseases from which he had suffered for the past few months, aged 66 years. He was born in Weaversville and learned the trade of moulder, but on account of impaired health sought outdoor labor. He first entered the oil business which he carried on for many years and sold out in 1894. The following year he built a small greenhouse and grew vegetables. From this beginning followed the culture of flowers and, building more and larger houses, he became a specialist on the carnation. He took up the close-fertilization of this flower and raised many seedlings, some of which were disseminated. In 1906 he sent out John E. Haines, a scarlet, and the following year Imperial and Pink Imperial, which were largely bought and grown.

He was an active member of the American Carnation Society and a member of the Grand Army of the Republic, being a veteran of the Civil War, enlisting in a Pennsylvania volunteer regiment. He was twice married, the first wife being Miss Matilda Stocker, to whom he was married in 1867 and who died July 15, 1909. Three children of this union survive him, Harrison S., Mrs. Minnie Haines Weber and Mrs. S. Elizabeth Kauffman. On February 10, 1910, he was married to Mrs. Amelia Charles. Besides the widow and children, he is survived by eight grandchildren.

Morris County Gardeners and Florists.

The Morris County Gardeners' and Florists' Society held their regular monthly meeting on September 13. The schedule for the forthcoming flower show was reviewed and several new classes were added, making 81 classes in all. The National Association of Gardeners are to hold their annual convention at the same time as the flower show and they will make some exhibits as well as hold their toasting and speech-making carnival. A number of these entries have been received by the secretary already.

THE Chicago Florists' Club will celebrate the twenty-fifth anniversary of its organization October 5.

WE are in receipt of an announcement of the death, September 6, of Pierre-Philippe-Hugues-Arthur Cochet, the well known rosarian and editor and proprietor of the Journal des Roses, at Suisnes, Grisy-Suisnes (S. & M.), France, in his fifty-third year.

ARRANGEMENTS have been made for a visit to the Rochester and Ontario fruit belt by Sir Frederick Moore, director of the Dublin (Ireland) Botanical Gardens, who is a well known authority on horticulture. Sir Frederick will first visit Boston and with Prof. C. S. Sargent tour the gardens of that city and will study the orchards of the country.

Society of American Florists.

REGISTRATION OF BEGONIA.

Public notice is hereby given that Loyd C. Bunch, of Fredonia, Kansas, offers for registration the begonia described below. Any person objecting to the registration or to the use of the proposed name is requested to communicate with the secretary at once. Failing to receive objection to the registration, the same will be made three weeks from this date.

DESCRIPTION.

Feastii Bunchii—Sport of Feastii. Habits of growth, etc., identical with Feastii with the exception that the edge of the leaf is crested or fluted around the entire circumference of leaf. H. B. DORNER, Sec'y.

Western Dahlia and Gladiolus Society.

INDIANAPOLIS MEETING AND EXHIBITION.

The adjourned initial meeting of the Western Dahlia and Gladiolus Society was called to order at the Dennison Hotel, Indianapolis, Ind., Tuesday, September 26, at 1:30 p. m., President Barnes, of Spencer, Ind., in the chair. The exhibition at Wiegand's dividing the attention, adjournment was made to that establishment to meet at 8 p. m. Director E. E. Stewart presided at the evening meeting in the absence of President Barnes, who was called home because of illness in his family.

Homer Wiegand was made secretary pro tem. Eleven new members were recorded, including prominent growers in the middle west. President-elect Richard Vincent, Jr., of the Society of American Florists, wrote expressing regret at his inability to attend and asked that his name be recorded as a member. On motion the chairman appointed three committees to take up in the immediate future the most pressing work of the new organization:

First—On co-operation for the Chicago Show in August.

Second—On nomenclature.

Third—On premiums and specials for the Chicago meeting.

A rising vote of thanks was extended to A. Wiegand & Sons for their courtesy in supplying exhibition space, assistance in staging and for entertainment of officers. After further discussion and examination of exhibits, the convention adjourned subject to the call of President Barnes.

THE EXHIBITION.

As early as six o'clock Messrs. Stewart, Barnes and others representing various exhibitors, were on hand at the big Wiegand show conservatory on Illinois street. On account of the late arrival of some exhibits the staging was somewhat delayed, but the exhibition was ready at noon.

President Barnes supplied something like 5,000 blooms of dahlias in many types and forms.

E. E. Stewart staged 75 varieties of gladioli, which came through in fine shape and showed up well, considering the lateness of the season. One of his new ones, somewhat resembling Mrs. Francis King, is called Michigan, a big flower and good spike. He also showed President Taft and Golden Queen.

Vaughan's Seed Store sent from Western Springs Ill., dahlias and gladioli in about 30 kinds, the latter including Mastodon and Chas. L. Hutchinson.

Messrs. Wiegand had announced the event in the daily papers and the attendance of the general public and interested amateur growers of these flowers was good, both through the afternoon and evening.

H. WIEGAND,
Secretary, Pro Tem.

Chrysanthemum Society of America.

EXAMINING COMMITTEES.

President Elmer D. Smith announces the committees to examine new chrysanthemums for the ensuing year which are as follows:

Boston—Wm. Nicholson (chairman), James Wheeler, Alex. Montgomery. Ship flowers to Boston Flower Exchange, C. Park street, care of chairman.

New York — Eugene Dailledouze (chairman), Wm. H. Duckham, A. Herrington. Ship flowers to New York Cut Flower Co., 55 Twenty-second street, care of chairman.

Philadelphia—A. B. Cartledge (chairman), John Westcott, S. S. Pennock. Ship flowers to A. B. Cartledge, 1514 Chestnut street.

Cincinnati—R. Witterstaetter (chairman), James Allen, Henry Schwarz. Ship flowers to chairman, Jabez Elliott, Flower Market, care janitor.

Chicago—J. B. Deamud (chairman), T. E. Waters. Ship flowers to J. B. Deamud, 160 N. Wabash avenue, Chicago.

Shipments should be made to arrive by 2 p. m. on examination days to receive attention from the committee. Must be prepaid to destination and an entry fee of $2.00 should be forwarded to the secretary not later than Tuesday of the week they are to be examined, or it may accompany the blooms.

Seedlings and sports are both eligible to be shown before these committees provided the raiser has given them two years' trial to determine their true character. Special attention is called to the rule that sports to receive a certificate must pass at least three of the five committees.

The committees will be in session to examine such exhibits as may be submitted on each Saturday during October and November, the dates of which will be October 7, 14, 21, 28, and November 4, 11, 18, 25.

TRADE A LITTLE LIVELIER.

A little more life was noticeable throughout the market the past week, especially among the retailers, which caused a larger demand on the wholesale houses. The Jewish new year was the cause of quite a demand, and some large funerals that called for a quantity of flowers, notably that of the millionaire head of the leather trust, C. W. Allen of Kenosha, Wis., practically cleaned up the market the latter part of the week, especially of American Beauty roses. Trade is reported by both wholesalers and retailers to be slowly improving. The displays by the large department stores at their fall openings is also creating quite a demand for the large and showy flowers. Chrysanthemums are now being received in large quantities, are used in all large displays and decorations and are bringing good prices. Asters are nearly done, there being but few of first quality offered, but carnations are much more abundant and of good quality, white carnations being quite plentiful. Roses are of first class quality, some very fine blooms of all the popular varieties being received. Mrs. Aaron Ward is improving rapidly and this variety is being well received by the customers at the retail stores. Many retailers are featuring them in the stores and window displays and they attract considerable attention. Gladioli are still very plentiful and the quality is good for the lateness of the season. Dahlias are more plentiful, but it is doubtful if the large quantities generally found on the market at this time of the year will materialize, the general opinion being that dahlias have not done as well this year as usual. Orchids are in much larger supply, there being large receipts of Cattleya labiata and some beautiful sprays of Oncidium varicosum Rogersii. Lily of the valley is in good supply and of good quality and is being largely used in the early fall weddings. Lilies are of excellent quality and are being received in good quantities, very fine vases of giganteums being seen at all the wholesale stores. The Japanese lilies are about done and are practically out of the market. Autumn foliage is being freely used in all the store windows and decorations betokening that the fall trade is opening. Greens are of exceptionally good quality and in good supply.

NOTES.

The Florists' Club will celebrate its twenty-fifth anniversary Thursday, October 5. The florists' clubs of Detroit, Cincinnati, St. Louis and Milwaukee have been invited to attend and have accepted the invitation. The regular club meeting will be held at 7 p. m., and after adjournment a banquet will be served in the large banquet hall of the Union hotel, 68-72 West Randolph street, at 8 p. m. Ladies are invited to attend and the club members are requested to bring their wives, daughters and sweethearts. F. F. Benthey, the oldest living president, will officiate as toastmaster. The committee in charge is A. T. Pyfer, A. C. Kohlbrand, Allie Zech, H. N. Bruns and E. C. Amling. Tickets may be procured of the committee or at the wholesale stores.

Eugene Dailledouze and wife reached this city September 24, returning from the Yosemite Valley, about which they are very enthusiastic, Mr. Dailledouze saying he would not have felt happy to have lived and missed this grand scenic spectacle.

A surprise party in which T. B. Gray of the Geo. M. Garland Co. played a prominent part, was held at the home of Miss Ida Poyer in Des Plaines on Tuesday, September 26. The tinkling sound of the wedding bells can almost be heard.

Wm. Sgoros, of the Madison Floral Co., took a few days off to show his friend, James Papadakos, around the city this week. The latter was here on business connected with the new store that he will open in Kansas City, Mo., in the near future.

Frank Johnson, of the A. L. Randall Co., is back from a successful business trip to Kansas City, Mo. Otto Goerisch, of the same firm, has returned from a similar mission, with the same story, to Racine and Milwaukee.

Geo. Perdikas has the contract for the arrangement of the decorations at the Stewart restaurant, the popular eating house, that recently opened on East Van Buren street.

It can be seen at a glance that Mrs. F. Williams is again in charge of the Atlas Floral Co.'s store, for the windows are again arranged in her artistic manner.

H. L. Keun, the Wentworth avenue florist, is back from a most enjoyable visit at Muskegon, Mich. His mother has returned from a few weeks' vacation at Akron, O.

Poehlmann Bros. Co. is cutting an extra fancy grade of white and yellow chrysanthemums, cattleyas and American Beauty roses.

The Chicago Carnation Co. is cutting a choice grade of carnations with Washington, Alvina and two new seedlings showing up exceptionally fine.

A. E. Hunt & Co., of Evanston, are filling a good many orders for rooted cuttings of Etoile d'Or and Chicago Market White daisies.

M. Winandy is building a range of vegetable houses in Evanston for C. P. Liedier.

E. E. Peiser, "the Peony King," has returned from a most enjoyable three months' visit in Canada.

POEHLMANN'S FANCY VALLEY
EXTRA FINE HARRISII LILIES
We make these a specialty. Can supply them all the Year. Once tried you will have no other

John Goede, the foreman of the Hoerber Bros.' greenhouses, at Des Plaines, has the stock looking in splendid condition and a good cut of Richmond, My Maryland, Killarney, White Killarney, Bride, Bridesmaid, and Mrs. Jardine roses is the outlook for the fall trade. A novelty that attracts attention is this firm's new rose Wilhelmina, a beautiful dark pink flower on long wiry stems bearing luxuriant foliage. This rose is said to be a good producer and will be disseminated by this firm next year. Lars Olson, the engineer at this place, evidently believes in beautifying the premises, for the rear of the boiler shed resembles a small park with an attractive flower garden and a small menagerie.

The A. Dietsch Co. has received another order for a second addition of two houses, 27x152 feet, from Furrow & Co., Guthrie, Okla. Baker Bros. of Fort Worth, Texas, evidently like the Dietsch material, for they have also placed their order with this firm. Carl Ickas, the hustling manager, says the A. Dietsch Co.'s books will show a 50 per cent increase at the close of this season over that of last year.

E. H. Hunt is filling a large number of orders for the Fisher Carnation Clip, which has recently been placed on the market and for which they are general agents. It is a very simple device and one that is meeting with much favor among the growers in this and other sections of the country. This firm will gladly furnish our readers with descriptive literature upon request.

Abe Iralson, a genuine western ranchman, of Wendall, Idaho, is renewing old acquaintances in this city. It will be remembered by many in the trade that he formerly conducted a store on East Forty-third street.

John Sinner says his firm will soon be cutting from a large crop of Killarney roses.

J. Arnold came down from Milwaukee this week to meet his wife, who returned from a several months' visit abroad. While he was in the city he placed an order with the A. Dietsch Co. for material for two new green houses.

The Golden Glow and October Frost chrysanthemums that Miss Martha Gunterberg is supplying her customers are of the first quality, as are also the roses which are now arriving in large quantities.

Wm. F. Fuller, the Ravenswood Park florist, says that trade in general is picking up and that he was exceedingly busy with funeral work on September 23.

The J. B. Deamud Co. is showig a very fancy grade of carnations, lilies, dahlias and roses, and are headquarters for good quality smilax.

E. J. Fancourt, representing S. S. Pennock-Meehan Co., Philadelphia and New York, is calling on the trade here this week.

Chas. Erne, formerly with E. H. Hunt, is going to open a retail store at his former home in Terre Haute, Ind.

Wm. Gregory and wife of Ludington, Mich., were welcome visitors this week.

In and out again, Edw. Amerpohl, of Janesville, Wis.

Growers, Attention

Why not sell your own stock?
We have the finest location in the Chicago market and space enough to accommodate several growers selling their own stock.

PERCY JONES

Plumosus
Smilax
Adiantum
Ferns

Tim Matchen says that the damage to the Peter Reinberg greenhouses on Robey street was not as large as was first expected, the only loss being the breakage of glass. The favorable weather we have had allowed the men sufficient time to make the necessary repairs before frost set in, thereby saving the plants that it was at first expected would be a total loss. The supply at the store is as large as usual, with an exceptionally fine grade of the beautiful rose, Mrs. Marshall Field, showing up exceptionally well.

J. A. Budlong is receiving a fancy grade of pink bouvardia, for which the demand is exceedingly heavy. It seems as if this popular flower is sold as soon as it reaches the market and that the supply is never equal to the demand. Phil Schupp, the enterprising manager, received a very complimentary letter from an out-of-town customer in Texas. in which the writer said that his stock is arriving in the best possible condition after being in transit two days.

A prominent florist who visited the Peter and George Reinberg and Chas. Handel greenhouses after the storm, states that in his opinion the wind which came from the west and first damaged the trees in Rose Hill cemetery, broke just as it reached Chas. Handel's and Geo. Reinberg's greenhouses, then started to rise, catching the top of Peter Reinberg's houses and blowing off the roof of the tall store building across the street from the latter place.

A. L. Vaughan of Vaughan & Sperry has been calling on the growers the past week and reports the outlook very promising, with plenty of stock for all. He says he found Wm. Lynch looking the picture of health, hard at work in his greenhouses, where he has been devoting his time since he resigned his position with E. H. Hunt a short time ago.

Headquarters for **ORCHIDS** and all Fancy Stock

CHAS. W. McKELLAR,

162 N. Wabash Avenue, CHICAGO.

Wietor Bros. are enjoying exceptionally good business, and the trade on Sunday, September 24, was so brisk that they were practically cleaned out. The cut of Killarney, White Killarney, Mrs. Jardine and American Beauty roses is very large and of exceptionally good quality, which enables them to give their customers plenty of good, choice stock.

Geo. M. Garland, the well known manufacturer of greenhouse material, visited Redford, Mich., to witness the manipulation of the greenhouse on wheels at A. J. Stahelin's. Mr. Garland furnished the material and was interested in the successful experiment, the houses being moved with the breaking of only one light of glass.

The many friends of Paul Blome are pleased to hear that he is feeling much better and that he is again able to attend to his duties at the store. Art. Blome is seen at the market every day buying stock for the splendid trade that his firm enjoys.

The Business Men's Commercial Association of the west side will hold a celebration next week, beginning Monday, October 2. A. I. Simmons, an active member, is making preparations to have several fine window displays at his store on West Sixty-third street.

E. W. Metz, with Mrs. J. B. Freeman, Toledo, O., visited the Poehlmann Bros. Co.'s greenhouses this week. Chas. Koelker and daughter of the same city were also seen in the local market on September 25.

Articles of incorporation have been granted Percy Jones, Inc. The capital stock is $10,000. The incorporators are H. Van Gelder, president, and L. M. Jones, secretary and treasurer, and R. D. Elder.

Mrs. Frank Garland has returned from a visit with her daughter Rennie at Albuquerque, N. M. Miss Garland's friends are pleased to hear that she is feeling much better and that her health is improving.

The Horticultural Society has finally decided upon the Art Institute for the spring show, which will be held March 11-17. Revised premium list will be issued shortly.

Bassett & Washburn are cutting a fancy grade of Golden Glow and Smith's Advance chrysanthemums. The roses and carnations that this firm is cutting are of their usual good quality.

O. Johnson of the Batavia Greenhouse Co. is supplying his customers with some good gladioli from a late crop.

Fred Strail and family have returned from a most enjoyable three months' outing at their cottage in Twin Lakes, Mich.

A meeting of the Illinois State Florists' Association will be held at the Dome building at the State Fair at Springfield at 2 p. m. October 3.

Sol Garland cut his first Golden Glow chrysanthemums this week.

The W. E. Lynch Co. has its new plant at West Twentieth street and Harlem avenue now in running order. There are three greenhouses, each 28x300 feet, all the bench space devoted to carnations, which look well, though on account of late planting (just completed) there will be no cut to amount to anything for some weeks. There is a fine crop of cabbage on the 10-acre property of the company, which, with the erection and stocking of the greenhouses, shows that Billy Lynch has been a busy man since he quit the commission business early in the summer, busy enough to take off 40 pounds and look fit as a Harlem winner of the long ago. It should be added that the greenhouses, although exposed to the full sweep of recent storms, never quivered. They are of Foley construction.

George Reinberg, in speaking of the damage done to his greenhouses by the recent severe storm, says the further the men go into the wreck the more the loss appears and that his loss would reach about $8,000 or $10,000. He hopes with a few more days of favorable weather to have the houses, which he intends to repair completed.

The new form of price list which the Chicago Flower Growers' Association has adopted is meeting with the approval of their customers, who are already ordering by the system adopted. It is very simple, easily understood and tells the buyer just what he may expect for the prices quoted.

Beauties, Roses, Valley

Chrysanthemums
Large supply—Fine quality.

Good Short Roses
$10.00 per 1000

Carnations
Good shipping stock in longer grades.

176 N. Michigan Ave., Chicago

The Geo. Wittbold Co. is shipping a large quantity of choice plants from their greenhouses at Edgebrook, where the stock is in exceptionally good condition. Otto Wittbold, who is ever on the alert for new novelties, placed a good sized order with Gebr. Teuple, Quedlinburg, Germany, for some of their early new acalypha hybrids.

Horticultural Society of Chicago.

EXHIBITION OF OUTDOOR FLOWERS.

The first fall exhibition of outdoor flowers was held by the Horticultural Society of Chicago at the Art Institute, Michigan avenue, September 21-23. The season has not been of the best for outdoor flowers, the early summer being exceedingly hot and dry and the heavy rain and winds of the last few weeks have ruined many of the best plants and blooms. Consequently the exhibits were not as numerous as was expected, but it is hoped that the show will be the forerunner of annual displays that will interest the growers of the city, both amateur and professional.

The principal exhibitors were Mrs. F. B. Andrus, A. W. Wilkinson, of Morgan Park, Cushman Gladioli Co., Sylvania, O., and Vaughan's Seed Store. The exhibits filled about 200 vases in the gallery at the northwest corner of the second floor of the institute and some new and meritorious exhibits were displayed. The Cushman Gladioli Co. showed a vase of a new dahlia, Majestic, which was awarded honorable mention. Vaughan's Seed Store was awarded a silver medal for the best display of cut blooms of hardy herbaceous plants, second prize for best vase of blue asters, third prize for collection of dahlias, special prize for display of cannas and bronze medal for best collection of vegetables. In the display of herbaceous flowers were noted some perennials of exceptional merit. Artemesia lacti flora was a very striking bloom with large heads of pure white flowers that were very showy. The Delphinium belladonna hybrids were splendid blooms of late flowering varieties of these showy plants. The display of phloxes was grand and included many new and beautiful varieties among which were noted: Tapis Blanc, a large pure white of great substance and fine large heads; Pantheon, bright carmine rose with large florets and large full spikes; Elizabeth Campbell, salmon pink, shading to white; the flowers are exceedingly large and the color very pleasing; Coquelicot, a bright scarlet of good size with compact truss; Gen. Von Heutz, another good red with white star in the center; Flora Hornung, a large white with carmine eye; Anthonin Mercie, a most beautiful lavender, a new color in phloxes and a decided acquisiton with extra large trusses; L'Aiglon, a large flower of deep rose coloring; Eugene Danzanvilliers, a showy variety of pale heliotrope with white center; Gruppen Koeningen, a beautiful light pink of daybreak shade; Mme. Paul Dutries, shell pink with large flowers and truss, and Bridesmaid, a pleasing white with pink eye.

The attendance at the show was very good through all three days, many of the visitors showing interest in the novelties and taking the names of the meritorious varieties that pleased their fancy.

A spring show will be held at the same place March 11-17, for which revised premium list will be issued shortly.

YONKERS, N. Y.—At a recent meeting of the Yonkers Horticultural Society it was decided to hold a flower show early in November.

Spring Show at Chicago.

A meeting of the executive committee of the Horticultural Society of Chicago was held September 25, at which J. C. Vaughan, Geo. Asmus, W. N. Rudd, James H. Burdett, Ernest Wienhoeber, N. H. Carpenter, Carl Cropp and R. J. Haight were present. The pricipal subject of discussion was the coming spring show which, as finally decided, will be held at the Art Institute March 11 to 17. A revised premium list will be issued shortly and copies may be had on application to James H. Burdett, 1620 West 104th place, Chicago.

Chicago Bowling.

Allie Zeck was unanimously elected treasurer at a meeting of the bowlers held at Zech & Mann's store on Monday, September 25. The bowling season, with a schedule of 90 games, will open on October 4 at Bensinger's new alleys, West Monroe street. Zech & Mann have donated a cup; John Michelson, of the E. C. Amling Co., six umbrellas, and the A. L. Randall Co., four scarf pins. In addition to above mentioned prizes, there will be many cash prizes to be awarded the winners, as in former years.

The line-up of the teams will be as follows:

Roses.	Orchids.
Fisher,	J. Zech,
Wolff,	Huebner,
Schlossman,	Farley,
Schunemann,	Groff,
Conners.	Goerisch.
Violets.	**Carnations.**

St. Louis.

IMPROVED WEATHER CONDITIONS.

There has been a delightful change in the weather, being decidedly cooler, and prospects of business are improving. A number of fall openings in the stores have caused a demand for cut flowers and floral arrangements. The Veiled Prophets' ball and annual fall festivities caused a demand the first week in October. The Jewish New Year was an event that called for many flowers.

NOTES.

C. Young & Sons Co. was visited by a very stylish and smooth young man who ordered a wreath to be sent to a certain address, tendered a check and received the change. A telephone message to the address given brought the response that there was no funeral at the house.

Mullanphy Florist are first in the field to organize a florists' union in St. Louis. They are willing, if formed, to employ union labor only. This will insure superior artists and give employes living wages. This move is strongly endorsed also by Grimm & Gorly.

A meeting of the executive committee of the Horticultural Society was held September 19 to complete arrangements for the coming flower show. It is expected that it will be one of the largest ever given here.

Edna Albright, designer at Grimm & Gorly's, has returned from her two months' vacation at the lakes in Michigan. Geo. Wagner, designer and decorator has been very busy of late.

The store of Mullanphy, florist, has been repainted and everything is in fine shape for fall trade. A fine assortment of novelties gives the store a very pretty appearance.

Miss M. S. Newman, who closed her store during the heated term, has reopened together with Miss Armstrong for the season. They have a fine, select trade.

Grimm & Gorly had the decorations of the Mercantile Club September 23 for the breakfast given to President Taft. The center piece was of American Beauty roses.

H. G. Berning is receiving some extra fancy long stemmed dahlias, also a fine grade of American Beauty roses.

The Bentzen Floral Co. is cutting carnations and are expecting a fine crop of early chrysanthemums.

Robert J. Windler returned from his wedding trip September 22 and is ready for fall business.

New Bedford, Mass.

The ninth annual fall exhibition of the New Bedford Horticultural Society was held in Odd Fellows hall September 14-16, and the hall was filled with meritorious displays. In the centre a magnificent display was staged by James Garthly, gardener on the H. H. Rogers estate in Fairhaven, which attracted a great deal of attention. John P. Rooney, gardener for Mrs. Frederick Grinnell, made a creditable exhibit containing many novelties. Peter Murray of Fairhaven displayed palms and decorative plants. Henry F. Michell Co., of Philadelphia, exhibited Kunderd's Glory gladiolus. The judges were Maurice Fuld of Philadelphia and A. H. Fewkes, Newton Highlands, Mass.

WEST MEDWAY, MASS.—Robert Doherty is to build a new greenhouse this fall 24x100 as an addition to his carnation houses.

KINGSTON, N. Y.—The large range of glass of Valentine Burgevin's Sons is in exceptionally fine condition this fall. The Christmas plants, poinsettias, begonias and cyclamen are very promising.

A BETTER TONE.

There is, if anything, a better tone to the market. Asters, we are pleased to say, are about in the last ditch. Roses and carnations each day are improving in quality. Killarneys are coming better colored and with the cooler weather we have had the past week the stems are better. Lady Hillingdon is beginning to assert herself in the market, Mrs. Aaron Ward has little call where the former can be procured. Radiance, as we have mentioned often during the summer, is still keeping up its reputation, although during the hot months the flower has been somewhat imperfect on opening. With the advent of cool weather that fault may be remedied. There are still Brides in the market and some we noticed were very good. As far as we know there is only one grower who has them. They seem to be a back number. The halo of former days has left them. Still we can all look back with pleasant memories of the protege of J. N. May. It was the means of building many places, and it may come back again and get into favor as of old. Richmonds as yet are unsatisfactory, but their innings will come later. American Beauties just now are good. In chrysanthemums Golden Glow is the only variety on the market. Lily of the valley is in excellent quality and plentiful; some salesmen are advertising some under the head of the Blue Ribbon strain. Of course we can tie a blue ribbon on a bunch of cabbage and call it anything. It's the price and quality the buyer looks at—not the name.

NOTES.

The Vegetable Growers' Association of America held their convention here last week in Horticultural Hall. Some 250 men and women representing twenty-six states and Canada, were present. A banquet at the Hotel Somerset marked the close of the business portion. There were 408 exhibits in 136 classes, $2,000 in prizes, which ranged from $2 to $100. At one of the meetings resolutions were adopted and will be sent to Washington condemning the free seed distribution. This game has been a bugaboo for many years. We think the money could be used for better purposes than at present, and we don't think it was at first intended to distribute the common kinds of garden seeds, but then congressmen may think by sending a few beans, squash and lettuce seeds they will stand solid with their constituents. They are nice, as we know personally, to feed to the chickens, but the country is paying for what seems to be a useless and expensive game.

With the breaking of the main support ropes, the elevator in the Warren building, Park street, Friday forenoon, crashed into the room occupied by the Boston Co-operative Flower Market. It came down from the fifth floor. The superintendent of the building was alone in the elevator at the time of the accident. He had both legs broken and was injured internally. Had the accident happened earlier some lives would have been lost, as it dropped in one of the aisles in the market.

Announcement.

The Seattle Cut Flower Exchange,

At 909 and 911 Post St., SEATTLE, WASH.

Has opened a **Wholesale** and **Commission Business** in

Cut Flowers, Plants, Native and Other Greens,

Where they are prepared to supply the dealers wants.

All Orders Will Receive Careful Attention. Consignments Solicited.

We noticed some fine American Beauties in Wax Bros. They are making a specialty of pansies tied in bunches.

John Jansky reports a good trade in greens and wire work, with a scarcity of bronze galax.

Vacations are over and everyone has settled down to business.

The retail stores all have nice window decorations.

MAC.

DAHLIAS, THE FLOWERS OF THE SEASON.

The week opens with a warm spell and the usual results follow—an overflow supply of soft stock. Dahlias hardly keep over from one day to another. Carnations appear very plentiful and of fine quality for the season, but are crowded to one side, as is most of other stock, by the dahlias, which are now at their height. Many beautiful sorts of these showy fall flowers are offered daily, the leaders being the superb Dorothy Peacock, Jack Rose, Lyndhurst, Ethel Moule, Kriemhilde, Arabella, Sylvia, Storm King and Minnie McCullough, the tawny copper-colored or orange, tipped with red, which is an ideal color when made up with autumn leaves. The quality of the stock shows quite an advance over that of last season owing to improved methods of culture, as well as selection of flowers and improved packing, choice flowers being now shipped one layer to a box and all select ones sold by the box and not handled except by the retailers when they are transferred to his show case. Chrysanthemums are now seen in stock every day—the early whites and yellows. Golden Glow is showing up fine and appears to sell very well. American Beauties are offered with confidence, no apologies being necessary. Good stock for the season in all lengths is seen in all the commission houses. Prince de Bulgarie looks as if it would be carried in stock by all the live stores. White Killarney will soon be white and will then lead all the roses of its color. The Double Pink Killarney improves and when the cool weather arrives gives promise to be the choice of its color. Cattleyas are much more plentiful, with softening prices on quantity lots. Violets are coming in, but are of poor quality; nothing much to them but the delicious odor. Easter lilies are now like lily of the valley, an all-the-year-round flower, and are much used for funeral clusters. Plenty of lily of the valley, enough to break or soften the price a little. Shipping trade is satisfactory, there being a good demand for the early out-of-town weddings. Good bunches of colored oak leaves are now on the market and are much used by the decorators. K.

Peacock Dahlia Farms,

P O.: Berlin, N. J. Williamstown Junc., N. J

Monmouth County Horticultural Society.

The Monmouth County Horticultural Society held its first fall meeting at Red Men's hall, Oceanic, N. J., September 22. There was a large and enthusiastic gathering. William Turner exhibited the finest cattleyas ever shown here. They were awarded 100 for color and 99 for size.

The chrysanthemum show was discussed and the proposition made to have the biggest show ever this fall. A discussion on the elm tree beetle followed, in which everyone participated. It was decided to write to the state senator and assemblyman urging the passage of a bill this winter to enforce spraying of trees for the destruction of this harmful beetle. N. B.

NEW LONDON, CONN.—The New London Horticultural Society is preparing for a chrysanthemum show in November.

STOCK IMPROVING.

There is a slight improvement in business, but it is very slight. The president and members of his cabinet are absent as are many others who contribute largely toward the social life of the capital, therefore there will be no entertaining worthy of mention for some time to come. The weather of the past week was somewhat unsettled but warm, the night temperature ranging from 65° to 70°. Roses and carnations are making good progress and good stock, for the season of this year's planting is seen. In roses this is most noticeable with Killarney and White Killarney. In what may be termed summer roses, good stock of President Carnot and Kaiserin is on the market. The yellow rose Melody seems prolific enough to supply all the yellow roses that are needed. In carnations there is, of course, a preponderance of Enchantress and its sports. The July and early August plantings are now beginning to show a fair length of stem and some passably good blooms, but with a continued succession of hot nights really good stock cannot be expected. Dorothy Gordon which is claimed by some people to be another Enchantress sport, is just now showing well both in stem and quality of bloom. No carnation that is grown in this section takes hold as quick after planting or makes such rapid progress as Beacon. It literally grows like a weed, and if it keeps up the pace should be fine for Christmas. The few plants we have noticed of White Wonder, though small when planted in the house early in August, have made rapid growth and are developing a good length of stem. It seems to be one of the new things that deserves a fair trial. Excepting a few Golden Glow, there are no chrysanthemums on the market, but the crop is coming on well. There are dahlias in abundance and one of the events of this week will be the excursion to the extensive dahlia farm of President-Elect Vincent at White Marsh, Md., where they will be seen in great profusion and variety.

NOTES.

An event of this week in which a number of the local florists participate is the meeting and parade of the Veiled Prophets. W. F. Gude is grand marshal of the parade, September 26, and has chosen among his aides F. H. Kramer, E. C. Mayberry, Geo. Shaffer, W. H. Ernest and O. A. C. Oemhler.

Visitors to Washington who do not take time to go to his greenhouses, can see his orchids and roses, particularly orchids, in most of the stores. Mr. Field has a sort of monopoly in orchids here, but as was once said of a prominent senator, he is an "easy boss."

The Avenue Floral Co., in which A. B. Garden and Harry Robey are the moving spirits, are encouraged by the outlook for business at their new store on Pennsylvania avenue. They still retain their interests in the Centre Market.

William Fisher, for many years identified with the florist business of this city, will take the management of the Washington Florists Company's store at Fourteenth and R streets October 1.

W. Marche, the retail florist, was recently thrown from his motorcycle and received an injury to one of his knees. Though suffering considerably, he hopes to be around again soon.

D. H. Von Bottger, at one time employed at the U. S. Botanical Gardens, has opened a stand in the Centre Market. He has greenhouses in Virginia.

Mrs. M. J. McCabe has been spending a week in New York and during her absence the boys have been busy in the Centre Market stand.

George H. Cooke has had a busy season with landscape work and has now on hand a lot of work that he is pushing to a finish before the busy store season begins. A. F. F.

Albany, N. Y.

With the approach of fall and the return of many people to the city, business is improving. At the opening of a new ladies' cloak and suit store on September 14 the Rosery received an order for 1,500 asters and 200 American Beauty roses which the management of the women's shop presented to visitors and customers. The Rosery also supplied considerable decorative material for the occasion. On September 15 the Rosery filled an order for the Paine-Flanders wedding at Chatham for which 300 invitations were issued. The order was the first of the season for a society wedding. On September 19 the firm made up two handsome wreaths to be sent to the funerals of Assemblyman James Oliver in New York and of Luke McHenry, clerk of the assembly, at Chittenango. The wreaths were gifts of assembly employes.

The special committee of the chamber of commerce appointed to examine the condition of the trees in the parks and streets of the city with Dr. E. P. Felt, state entomologist, has submitted a report to the main body. The committee recommends that the city appropriate the first year $5,000 for the salary of an expert forester, assistants, and extra spraying apparatus. The committee believes that the services of a skilled forester are necessary and that he should have six spraying outfits operated by four men each under him. The elm leaf beetle and the San Jose scale are two of the insects mentioned causing the loss of many of the city's beautiful shade trees.

Philip Bender, city superintendent of parks, is pleased over the receipt of a letter from residents in Madison avenue near the Cathedral of the Immaculate Conception who are satisfied with the manner in which the superintendent and the workers under him during the summer maintained the little park in Madison place, fronting the cathedral. City officials are often subjects of censure and few people think it worth while to send in a word of commendation when one of them does exceptionall well, hence the value of the letter.

George C. Hawley, president of the Dobler Brewing Co., has awarded the contract for a conservatory and greenhouse to Lord & Burnham Co., New York. The structure will be a duplicate of the one built by the same firm at Mr. Hawley's place, 994 Madison avenue, a year ago. The dimensions are 19 by 75 feet.

Philip Warner, Newtonville, is building two houses 30x150 feet each, in which general stock will be grown. R. D.

RIVES JUNCTION, MICH.—Sam Young Haines, of H. W. Buckbee's, Rockford, Ill., was a recent caller, revisiting the place where he formerly conducted a mail-order business.

Saturday morning we will be open for business at the above address, where we hope to welcome all our Florist friends in Cleveland and vicinity. Call and see us, so we will get better acquainted. We probably have something you want. We want your trade, and we both want to push the flower show. We expect to open up with a nice line of Asters, Gladioli, American Beauties, Roses, Carnations, Lilies, Valley, Violets, Cattleyas, Chrysanthemums, Dahlias, Smilax, Adiantum, Asparagus Plumosus (strings and bunches), Sprengeri, Ferns, Galax, Leucothoe, Wild Smilax, etc., and a full line of Florists' Supplies Remember, Mr. Retailer, with your assistance we will maintain a first-class house that will be of great benefit to you this winter. We positively will do no retailing under any circumstances. We intend to protect the retail dealer all we can and we in turn expect your assistance in order to carry this out.

Cleveland.

BUSINESS IMPROVING.

Business is slowly improving and market conditions are about the same as far as stock is concerned. Asters are still very plentiful, although the good stock is in the minority. Gladioli are good generally but receipts show a falling off in quantity. Dahlias are next on the list, but as yet they are mostly the shorter stemmed flowers, the long-stemmed ones selling readily. Carnations are in early this year, and the quality is very good; many short stems are among them however, and these do not move as readily. Easter lilies have been a little short of the demand. A few sweet peas of excellent quality are beginning to arrive. Roses of all grades and colors are plentiful and show midwinter form, American Beauties in particular, being the best sellers. Killarney and My Maryland are also very good both as to color and length of stems. The new yellow rose Mrs. Aaron Ward is well thought of by all who have used it, particularly for corsage work, and table decorations. Lily of the valley has not been overplentiful but the quality is good with a fair demand. Tritomas are being used quite freely now. Pumpkins and other vegetables and autumn foliage are in line for Hallowe'en decorations.

NOTES.

The Smith & Fetters Co. had several table decorations at Erie, Pa., September 16-17 for Mrs. Chas. Strong, who gave a luncheon in honor of President Taft. Clarence Meyers of this firm had charge and was highly complimented on the beauty and the style of the decorations.

F. A. Friedly has been very ill the past week but is improving rapidly, and expects to be up and around on a crutch in a few weeks. Frank's many friends wish him a speedy recovery.

The Cleveland Florists' Exchange received their first consignment of boxwood this week.

Naumann & Son have added a Flanders 1912 model automobile to their delivery service.

Double White Killarney

This Rose, in the opinion of the best Rose Growers in the country, is

The Grandest Forcing Rose That Has Ever Been Offered

Pure white, or practically so, with size, substance and petalage, it is a wonderful white summer rose, and as a winter forcing rose it has no equal.

Killarney Queen A cerise pink, with the same petalage as Killarney, but in growth and character of bloom it is stronger and heavier than Killarney.

These are the roses shown at the Baltimore Convention in August. We shall show them in St. Louis, Milwaukee and Chicago this fall. They will be at Detroit in January.

Each variety considered separately; prices the same.

GRAFTED

Each	$0 75	250	$ 70 00

Morton Grove, Ill., Aug. 7, 09.

Geo. Garland Co.,

After a recent severe windstorm, and while both style of houses, those supported by purlins and the other trusses, were in course of construction, we found the trussed houses stood the racket best, and came through with very little loss of glass.

We therefore recommend the trussed in preference to purlin supported houses.

The Seed Trade.

American Seed Trade Association.

Leonard H. Vaughan Chicago, President; Marshall H Duryea New York First Vice-President; Edgar Gregory, Marblehead, Mass., Second Vice President; C. E Kendel, Cleveland O., Secretary and Treasurer.

Next annual convention June, 1912.

RECENT frosts have damaged to some extent northern New York cucumbers and Connecticut sweet corn.

CHICAGO.—Prices on the Board of Trade, September 27, for grass seed, were noted as follows: Timothy, $13 to $14.75 per 100 pounds.

VISITED CHICAGO: C. C. Massie, of Northrup, King & Co., Minneapolis, Minn.; Paul F. Richter, manager of the Henry F. Michell Co.'s store, Philadelphia, Pa.

CARTHAGE, MO.—L. H. Archias, of the Archias Seed Store, Sedalia, accompanied by Mrs. Archias and daughters, Elise and Edith, were recent visitors attending the state fair.

NEBRASKA vine seed growers are reporting full deliveries on cucumber, musk and watermelon seed, also nearly full deliveries on the leading varieties of squash seed. Pumpkin will be 50 to 75 per cent only.

ROBERT FULTON, of L. Boehmer & Co., Yokohama, is enroute to Japan on his return. Mr. Fulton's friends regret that his health did not permit him to come east of the Pacific Coast. F. H. Henry, who has attended to Mr. Fulton's affairs in Japan, has not yet announced his return sailing.

W. ATLEE BURPEE advises that Denmark has this season uniformly good crops of cabbage and cauliflower seed. He was much surprised to learn on his return home of the many and alarming shortages, "almost a famine," he says, in peas as well as in the Vilmorin strain of Paris Golden Self Blanching celery. He notes also the great shortages in beets, mangels, carrots, parsnips and in some cabbages, radishes and turnips. Definite percentages of some of these well known shortages have been noted in these columns from time to time. He says the lowest wholesale price in London, September 18, on Gradus peas was 60 shillings, nearly $15 per bushel.

THE Fottler, Fiske, Rawson Co., Boston, Mass., has its own private cold storage plant for lily of the valley and forcing lilies. A cold storage plant pipes ammonia all along the streets in that vicinity to commission men and meat dealers. Mr. Fiske claims cold storage plants will not keep lily of the valley at the right temperature. They either freeze it up or let it get too warm. The Fottler, Fiske, Rawson Co. keeps lily of the valley at 26 to 28 degrees and lilies at 34 to 40 degrees, using two compartments.

SOME growers of French bulbs are trying the plan of dumping their overstock of bulbs on the American market. The anxiety of the Growers' Syndicate to secure high prices has caused them to demand higher prices than the buyers in various parts of the world could afford to pay. Evidently those growers have but a narrow knowledge of market demands in those countries using these bulbs and should give more heed to the advice of the jobbing and export dealers in their own cities and thus prevent the recurrence of this unfortunate and unnecessary overcharge on part of the stock and the "give-away" prices on the unsold surplus at a time when the bulbs are really out of season.

Non-Warranty Clause Sustained in Iowa.

The Supreme Court of Iowa, in a decision rendered July 5, 1911, has sustained the seedmen's non-warranty clause in the case of Blizzard Bros. versus Growers' Canning Co., Younkerman Seed Co., defendant on cross petition, according to the Northwestern Report, as follows, volume 132, page 66:

(1) The alleged liability of the Younkerman Seed Co. The evidence that a general custom, such as pleaded, prevails in the seed trade was conclusive. The particular package had the printed matter thereon, and, though this may not have been noticed, the sale is presumed to have been negotiated with reference to the general custom of the trade. This being so, a warranty that the seed was true to name could not be inferred, and the court rightly found in favor of the Younkerman Seed Co.

(2) In the case of the Growers' Canning Co. it was held that this concern contracted to supply the growers with seed to produce pumpkins suitable for canning, and failed to do so, hence reversal of the original judgment which was in the canning concern's favor.

Importation of Insecticides.

An order of the Treasury Department under date of September 8 states that the custom regulations of 1908 are hereby amended so as to apply to insecticides, Paris greens, lead arsenates and fungicides as they are now applicable to food and drug products. All invoices of insecticides, Paris greens, lead arsenates and fungicides imported into the United States shall be accompanied by a declaration of the shipper made before a United States consular officer stating that none of this merchandise is falsely labeled in any respect, nor dangerous to the health or to the people of the United States, nor forbidden entry in, nor sale in, nor restricted in sale in, the country in which it is made or from which it is exported.

Boddington's Quality Christmas and Winter-Flowering Sweet Peas

ALL true stocks of Winter-Flowering Sweet Peas will be scarce this season, some varieties are a total failure, owing to the exceptiona season in California this spring. Our advice to intending planters is to order early. Our stocks of Christmas-Flowering Sweet Peas have stood the test for years, and we can refer you to the largest growers of this increasing popular flower, as to the trueness and quality of our seed, earliness of blooming period, and strength and habit of plants.

The following varieties are the "best by test" and include Zvolanek's and our own introductions, grown for seed from selected stocks by leading California Growers and Specialists of Sweet Peas. Our output last year was nearly 6000 lbs. No kicks and plenty of testimonials as to quality, germination and trueness to type.

Winter-Flowering Sweet Peas at National Flower Show, Boston, March 25th to April 1st, 1911. Partly showing Mr. Wm. Sim's Exhibit, who won the majority of the leading prizes—seed almost exclusively supplied by "Boddington." Sim's Sweet Peas were one of the sensational Exhibits at this Grand Flower Show—average length of stem being twenty inches.

Boddington's Quality Winter-Flowering Sweet Peas

At the Exhib tion and Convention of the National Sweet Pea Society of America, July 12th and 13th, 1910 we again won the C. C. Morse & Co.'s Silver Cup for the finest and best collection of Sweet Peas open to the trade only.

BODDINGTON'S EXTRA EARLY CHRISTMAS WHITE SNOWBIRD. An Exceptionally early Sweet Pea for indoor flowering—**will bloom six weeks after sowing.** Color clear white, upon long stems; habit fairly dwarf and of exceptionally free-flowering qualities. Without doubt, the finest early white for indoor planting. We sell one grower in Pennsylvania 35 lbs. of this variety every year, name on application. Oz., 30 cts.; ¼ lb., 85 cts.; ½ lb., $1.50; lb., $2.50.

BODDINGTON'S CHRISTMAS PINK. This is the earliest and most profitable and useful Sweet Pea in cultivation, as by sowing the seed under glass in latter part of August, flowers can be cut from Thanksgiving on during the winter months. Oz., 25 cts.; ¼ lb., 75 cts.; ½ lb., $1.25; lb., $2.00.

BODDINGTON'S CHRISTMAS WHITE. A companion to our Christmas Pink. Just as free and profuse a bloomer. Oz., 15 cts.; ¼ lb., 50 cts.; ½ lb., 85 cts.; lb., $1.50.

BODDINGTON'S CANARY. Similar to the above, but flowers of an exceptionally good yellow. Oz., 35 cts.; ¼ lb., $1.00; ½ lb., $1.75; lb., $3.00.

BODDINGTON'S FLAMINGO. Color scarlet; free-flowering and early. Oz., 50 cts.; ¼ lb., $1.50; ½ lb., $2.75; lb., $5.00.

Christmas Meteor. Scarlet; fine open red flower. Oz., 25 cts.; ¼ lb., 75 cts.; ½ lb., $1.25; lb., $2.00.

Christmas Captain. Blue and purple. Oz., 25 cts.; ¼ lb., 75 cts.; ½ lb., $1.25; lb., $2.00.

Florence Denzer. Pure white. Oz., 15 cts.; ¼ lb., 50 cts.; ½ lb., 85 cts.; lb., $1.50.

Greenbrook. White · standard, slightly touched with lavender. Large orchid flowering variety. Oz., 25 cts.; ¼ lb., 75 cts.; ½ lb., $1.25; lb., $2.00.

Le Marquis. This is the same color as Princess of Wales, violet; has very large flowers. Oz., 25 cts.; ¼ lb., 75 cts.; ½ lb., $1.25; lb., $2.00.

Miss Helen M. Gould. White, open flower; standard lilac, marbled. Oz., 25 cts.; ¼ lb., 75 cts.; ½ lb., $1.25; lb., $2.00.

Miss Josey Reilly. Lilac; very large flowers. Oz., 25 cts.; ¼ lb., 75 cts.; ½ lb., $1.25; lb., $2.00.

Mrs. E. Wild. Carmine or dark pink. Oz., 25 cts.; ¼ lb., 75 cts.; ½ lb., $1.25; lb., $2.00.

Mrs. Alex Wallace. Very scarce. Lavender. Oz., 50 cts.; ¼ lb., $1.50; ½ lb., $2.25; lb., $4.00.

Mrs. William Sim. Salmon-pink. Crop failed.

Mrs. George Lewis. Large, pure white wavy flower. Oz., 25 cts.; ¼ lb., 75 cts.; ½ lb., $1.25; lb., $2.00.

Mrs. W. W. Smalley. Satiny pink. Oz., 35 cts.; ¼ lb., $1.00; ½ lb., $1.75; lb., $3.00.

Mrs. F. J. Delansky. Daybreak pink. Oz., 25 cts.; ¼ lb., 75 cts.; ½ lb., $1.25; lb., $2.00.

Mrs. Chas. H. Totty. Sky-blue; late. Oz., 25 cts.; ¼ lb., 75 cts.; ½ lb., $1.25; lb., $2.00.

Mrs. Zvolanek. Blue, variegated; good for variety. Oz., 50 cts.; ¼ lb., $1.50; ½ lb., $2.75; lb., $5.00.

Wallacea. Very fine lavender; a grand florists' variety. Oz., 50 cts.; ¼ lb., $1.50; ½ lb., $2.75; lb., $5.00.

Watchung. Pure white. Oz., 25 cts.; ¼ lb., 75 cts.; ½ lb., $2.00.

Wm. J. Stewart. Blue self. Oz., 25 cts.; ¼ lb., 75 cts.; ½ lb., $1.25; lb., $2.00.

All other varieties of Winter- and Summer-flowering Sweet Peas supplied. Write for quotations.

GOOD JOBS FOR GOOD MEN

THE growing importance of the horticultural trades is strikingly shown by the demand for trained men who are familiar with the greenhouse, nursery and seed businesses. We could use, or place with our clients, at least a dozen good men if we knew where to find them. Some of the openings that offer unusual opportunities, details concerning which can be obtained by writing us, are as follows:

COPY MEN.—For our own staff. The first requirement is the ability to write clear, concise, convincing English—and consequently experience on a daily paper is almost necessary. Another essential is love of the things that grow and a successful record in growing plants, trees and shrubs, commercially or otherwise. Further, it is highly desirable to have had training in the sales department of some business—preferably, of course, in one the product of which is sold to the classes of people who buy fruits or ornamentals. Only young men can be considered, and good health, clean habits, ability and willingness to do a lot of hard work, are some of the necessary qualifications.

PARTNER IN NURSERY.—For one of the best greenhouse and nursery plants in the country—50,600 feet of glass and 130 acres. A competent man who possesses good business ability will be sold a half interest at a fair price and on reasonable terms. Locality is unexcelled for growing many kinds of nursery stock.

CORRESPONDENCE CLERK.—For leading nursery, growing fruit and ornamental trees, etc., in large quantities, and selling both at retail and wholesale. The business of this firm is growing by leaps and bounds, and there is no better opening for a young man of energy, adaptability and some experience in the right line.

OFFICE MANAGER.—For another prominent firm of nurserymen. A man who knows book-keeping, office systems, filing methods, etc., and who is thoroughly up-to-date, will find this the chance of a lifetime. "Has beens" and fellows who know it all need not apply, however,—a "live wire" with executive ability is required.

SHIPPING FOREMAN.—For great eastern fruit-tree nursery. A fine position for men of good habits and clear record. No booze-fighters or lazybones will be considered. Knowledge of varieties and of good and bad trees an absolute essential—also ability to handle and hustle men.

Write us fully if any of these openings appeal to you.
Your communications will have prompt attention.

HARRISBURG, PENNSYLVANIA

Market Gardeners

Vegetable Growers' Association of America.

H. F. Hall, Boston, Mass., President; —, West, Rochester, N. Y., Vice-President; S. W. Severance, 508 Walker Building, Louisville, Ky., Secretary; M. L. Reustenik, Cleveland, O., Treasurer.

WE had the pleasure of testing recently some excellent cantaloupes grown by J. W. Hammond on his ranch at Elgin, Utah, and shipped in car lots to Chicago commission dealers.

NORFOLK, VA.—The Fox-Hall Farm is erecting a Lord & Burnham iron frame greenhouse 25x300 feet and many sash and slat houses for vegetable plant growing. They make a specialty of growing cabbage and lettuce plants by the acre for the trade as well as for their extensive truck farm.

Vegetable Growers' Association of America

The fourth annual convention of the Vegetable Growers' Association of America was opened in Horticultural Hall September 19 and continued for three days, closing with an unsurpassed exhibit of vegetables held by the Massachusetts Horticultural Society Friday, September 22.

The convention was called to order at 1:30 p. m. on Tuesday by President R. L. Watts with a large attendance. In the absence of Mayor Fitzgerald, Acting Mayor Walter Collins welcomed the delegates to the city. He was followed by President H. F. Hall of the Boston Market Gardeners' Association, who expressed the great pleasure and honor in having the association meet in Boston. The speeches of welcome were responded to by E. A. Dunbar of Ashtabula, O. The session then took up the routine business and the reports of committees.

At the evening session David Lumsden of the New Hampshire College of Agriculture, Durham, N. H., delivered an illustrated lecture on the "French and English System of Vegetable Forcing" and was followed by an illustrated lecture on "Marketing" by Paul Work, Cornell College of Agriculture, Ithaca, N. Y.

At the Wednesday morning session the paper prepared by J. Lockie Wilson, secretary Ontario Vegetable Growers' Association, was read by Secretary Severance and the afternoon was spent in visiting the market gardens and vegetables houses of Greater Boston. In the evening papers were read by W. R. Cobb of Irvington-on-Hudson on "Greenhouse Construction and Heating," illustrated with views of different houses and methods of constructing them, and by H. B. Fullerton of Medford, L. I., N. Y., on "Open Air Opportunities," also illustrated.

Thursday morning Burte C. Haines of Norfolk, Va., delivered an address on "Truck Crop Rotations as Practiced by Hotbed Growers of Norfolk, Va.," and C. W. Waid of New Carlisle, O., read a paper on "What Experiment Stations Are Doing for Vegetable Growers." The papers were all freely discussed and the question box developed many knotty subjects that interested the members in attendance.

The election of officers resulted as follows: H. F. Hall, Brighton, Mass., president; ——— West, Rochester, N. Y., vice-president; S. W. Severance, Louisville, Ky., secretary; M. L. Reutenik, Cleveland, O., treasurer.

On Friday one of the largest exhibitions of vegetables ever staged in Boston was opened at the halls of the Massachusetts Horticultural Society, exhibits being shown from all over New England, New York, and some states further west. Following are the awards:

Collection of vegetables—20 kinds: E. Jenkins, first; Fred'k Mason, second; Allen Jenkins, third. 12 kinds: Waban Gardens, first; F. Mason, second; J. B. Shurtleff, Jr., 6 kinds; M. Callahan, first; Mrs. A. A. Warburton, second; F. W. Dahl, third. - Arti choke—Globe: E. Jenkins, first. Jerusalem—4 qts.: T. Valentine, first. Asparagus—50 stalks: E. Jenkins, first; A. Jenkins, second.

The Nursery Trade

American Association of Nurserymen

J. H. Dayton, Painesville, O., President; W. H. Wyman, North Abington, Mass., Vice-President; John Hall, Rochester, N. Y., Sec'y. Thirty seventh annual convention to be held at Boston, Mass., 1912.

NEW ROCHELLE, N. Y.—Thomas J. Wade, formerly manager of the Bonnie Brae Nurseries, has opened a nursery and landscape business at 74 Drake avenue.

BUFFALO, N. Y.—City Forester Filer intends to plant 3,000 to 4,000 trees this fall if favorable action is taken by the commission. American elms will be used mostly with some maples, oaks and other shade trees.

Southern Pine Beetle.

The Southern pine beetle is the subject of a notice from the Department of Agriculture as regards the destruction of timber in the South Atlantic and Gulf states, it being the most destructive insect enemy of the living pine in Southern states. Its work is indicated by the fading greenish brown and reddish brown foliage of patches of dying young or old trees, and careful examination should show galleries in the bark of the middle and upper portion of the trunk of dying trees and marks on the surface of the wood which positively identify this insect as the cause of the trouble. It is recommended by the department that the infected bark of the dying trees be burned during the months of November, December, January, February, March and April.

Notes From Southern California.

We have already mentioned the beautiful effects that are produced on lawns hereabouts by planting that fine old species, Plumbago Capensis, but a sight not to be easily forgotten may now be seen in Elysian park, Los Angeles. Here this plumbago has been planted as a hedge, not a stiff, straight or formal affair, but a big undulating line of blue running for hundreds of yards, here six or eight feet high and there running out over the road which it borders. The effect is like a large blue river breaking on a sandy shore, the shore being the road. In the opposite side is the white variety (alba) but this is not nearly as pretty as the blue form. Beautiful as this plant is in the greenhouse those who only know it that way can hardly imagine what a grand effect can be got out of it by the above and similar plantings outdoors.

The hydrangeas again have been magnificent. The writer has seen these in many different places. Visitors to the North Devon seaside resorts in England will call to mind the immense bushes there and the beautiful blue tint that seems to be reflected from the waters of the Atlantic. Here there are fewer blue flowers but the pink trusses are so freely produced that there is nothing else to be seen. The foliage is quite hidden and we have never seen plants so absolutely full of flower. True, other splendid plants must be noted at the risk of tiring readers and that is the red eucalyptus. The gum tree is not beautiful as a rule but at Franklyn and Cheremoyo avenue at Hollywood, quite close to the El Reah greenhouses, is a tree about 30 feet high one solid mass of the brightest scarlet. It is worth going many miles to see and puts in the shade the Australian flame tree (Brachychiton acerifolium) growing in a garden close by. These are among the most showy trees now flowering, the beautiful Jacaranda mimosæfolio being now past its best. Poinerona pulcherrima will soon be in full beauty, while several pittosporums are also showy.

Among the native plants the California lilac (Ceonothus) should have first place. On the foothills around Los Angeles this is very beautiful, great masses of it now being covered with its whitish and blue spikes of flower, in appearance much like the lilacs of the east. The fuchsia flowered gooseberry (Ribes speciosum) is now in fruit and is hardly less beautiful than when in flower. Streptosolon Jamesoni flowers here the whole year through. It is now perhaps at its brightest and best but there is not a month in the year when its pretty orange and scarlet flowers can not be seen. The flowers of the silk oak (Grevillea robusta) are passing but the foliage of course is fine the year around, second only in beauty to the ubiquitous California pepper tree which is again showing its berries. This is the plant that produces the pepper bough with which all retailers are familiar, though in the half-wilted state in which it reaches the eastern markets it gives but a poor idea of the true beauty of the tree.

H. R. R.

Association of American Cemetery Supts.

At the convention of the Association of American Cemetery Superintendents, held at Philadelphia, Pa., September 12, of which an account appeared in THE AMERICAN FLORIST issue of September 30, page 482, the following members were registered:

SPECIAL PEONY OFFER

A Select List of the Best Varieties. Ten Acres of Peonies Grown.

Jackson & Perkins Co., Newark, New York

PEONIES It is not necessary to grow a thousand or even a hundred varieties to have a collection that will include everything really worth while. We have sifted out all the duplicates, eliminating those with defects of any kind, and present here an assortment covering the entire range of colors, extending over the blooming season, and representing the very best out of hundreds of varieties gotten together from specialists in France, England, Holland, Japan, and in this country. Strong divisions, with three to five good eyes.

	Per 100
Camille Calot, light rose	$10.00
Carnea Striata, pale flesh, shading to almost pure white	9.00
Charlemagne, creamy white, center light lilac, flesh shaded with chamois, late	20.00
Clarissa, rosy-pink; inner petals sulphur	6.00
Comte de Diesbach, dark red; early	10.00
Comte de Jussier, outer petals pink, inner yellowish	10.00
Comte de Nanteuil, very large and full; dark rose	8.00
Comte de Nieppberg, dark rose-pink; large bloom	10.00
Comte d' Osmond, white with sulphurish center	20.00
Couronne d' Or, immense; very full, imbricated, ball shaped bloom; snowy white with yellowish stamens; fragrant; perfect as a cut flower sort; very late, coming in after all other long-stemmed whites are gone	20.00
Delachei, deep crimson-purple; one of the best dark peonies; late midseason	10.00
Dortens Coros, bright pink	6.00
Duchesse de Nemours, the Calot variety, cup-shaped, sulphur-white; late, and one of the best whites	20.00
Duke of Wellington, flowers fragrant, sulphur-white, large and well-formed; strong grower; stems long and firm; late midseason	20.00
Edulis Superba, soft pink; very early	10.00
Felix Crousse, brilliant, flaming red; far and away the best red; the popular color with florists; late midseason	25.00
Festiva Alba, ivory-white, with occasional crimson spots in center petals; ships well and stands cold storage excellently; late midseason	15.00
Festiva Maxima, the ideal early white for floral work; a well-nigh perfect peony	15.00
Floral Treasure, rich, soft pink	15.00
Francois Ortegat, semi-double; large purplish-crimson bloom, with brilliant golden yellow anthers; very striking	10.00
Gen. Cavaignac, lively lilac-pink, shaded clearer pink	8.00
Gloire de Douai, purplish scarlet-crimson with black reflex; late	10.00
Golden Harvest, very large blooms; blush guard petals; creamy-white center; midseason; one of the freest bloomers	15.00
Grandiflora Carnea Plena, very early; clear flesh-pink, shaded lilac; keeps well; ships well; desirable for cutting or landscape work	8.00
Grandiflora Rosea, light rose; outer petals very large, inner smaller and bunched; vigorous grower	8.00
Lady Bramwell, silvery pink; late midseason	10.00

	Per 100.
Laius, outer petals white, inner sulphur, changing to white; medium size	12.00
La Tulipe, late; very large, full, shell-formed blooms, borne on long, erect stems; delicate rose, fading to creamy white; one of the best	30.00
La Sublime, crimson; fine, full, fragrant	12.00
Livingstone (true Crouse variety), soft rosy pink, silvery reflex, strong, long stems; best late pink	40.00
Louis Van Houtte (Delache), fine dark crimson; very double; strong	12.00
Meissonier, reddish purple, crimson center	50.00
Monsieur Barral, soft, clear pink; large and full; long stems	10.00
Monsieur Dupont, very large; ivory-white with carmine border in center petals; attractive; late midseason	20.00
M'lle. Marie Calot, satiny rose	10.00
M'lle. Rene Dessert, in clusters, soft lilac with silvery-violet reflex	20.00
Madame Crousse, one of the best whites; midseason	20.00
Madame Ladon, bright cherry pink	10.00
Madame Rose Rendatler, delicate rose	8.00
Nigricans, very late, brilliant, purplish-crimson	20.00
Nobilissima, bright, deep pink; good stems; lasts wonderfully	20.00
Officinalis Mutabilis Alba, earliest white	15.00
Officinalis Rosea, earliest light pink	15.00
Officinalis Rubra Pleno, the well known, very early, double crimson	12.00
Palmata, cut-leaved; single scarlet; earliest	25.00
Papaviflora, guard petals pure white; others yellowish; excellent	15.00
Phryne, blush white	8.00
Prince Imperial, brilliant purplish-scarlet; free bloomer; fine for massing in landscape work	12.00
Prolifera Tricolor, soft flesh, with center of golden yellow	8.00
Queen Victoria (Whitleyii). There are two well-known varieties of this name. This is the standard pure white market variety for storage	10.00
Richardson's Dorchester, salmon-pink, one of the very best late ones	25.00
Richardson's Grandiflora, flesh-pink, with lighter shades in center; fragrant; one of the largest peonies known; latest pink in bloom	50.00
Rosea Superba, brilliant, deep cerise-pink, blooms compact and perfectly formed; healthy growth; long stems; keeps well; late midseason	25.00
Rosea Plena Superba, very full flower; delicate pink and salmon	10.00
Tenuifolia, single, bright scarlet	25.00

THE BOOK OF GLADIOLUS

THE first authoritative book on this bulb ever printed in America, or possibly the world, issued April 1, 1911. This 120-page book, written by Matthew Crawford and Dr. Van Fleet, contains many chapters covering all sides of growing, propagating storing, etc., and also some pages of valuable cultural notes gathered from reliable sources. A necessity for both amateur and grower. The book is bound in cloth and fully illustrated.

The Home Correspondence School
Dept. A. F., Springfield, Mass.

Brampton, Ont.

The Liverpool strike is doubtless responsible for the delay in English glass deliveries throughout Ontario, but growers live in hopes that another week will see everything safely housed.

A meeting of the directors of the Ontario Horticultural Association was held in office of W. J. Lockie Wilson at the tent of the Ontario Department of Agriculture on the Toronto Exhibition grounds Wednesday, Semember 5. Every director was present, President R. B. Whyte, Ottawa, in the chair. An excellent programme has been prepared for the annual convention which will be held in Toronto some time during the second or third week in November next. A number of well known speakers from the United States and Canada will give addresses on that occasion.

The Killarney roses are making a good beginning this season, and American Beauties give promise of a fine harvest in the near future. Sales in carnation plants have fully justified increased field operations, and only a few are left for late planting; the development under glass has more than made up for the size of the plant in every variety.

Seasonable Stock

Christmas Peppers, 4-inch pots, fine, $10.00 per 100.

Cineraria, Grand little plants in 2¼-in. pots, $2.50 per 100.

M. J. SHAAF, Dansville, N. Y.

NEW HAVEN, CONN.—The Doolittle Floral Co. had an auspicious opening September 14. A. L. Doolittle, the president and manager of the new corporation, is well known in the city, having been with the Frank S. Platt Co. for 18 years. Frank C. Dowd, treasurer and assistant manager, has conducted a store in Madison. Henry H. Kelsey, secretary and superintendent at the greenhouses, was formerly with the A. N. Pierson Co. of Cromwell. The three above officers with Frank S. Platt constitute the board of directors.

Heacock's Palms and Ferns

Home Grown, Strong, Clean and Well Established Describes our palms. No more words are necessary. "Our satisfied customers are our best advertisement." One customer who has been dealing with us for years sent us an order for $1,500 worth of palms without seeing them. Another whose order last year amounted to $700, gave us an order this year amounting to $1600. Send for our new booklet and give us a **trial order.** Lay in your stock of palms in **September** while you can have them shipped **by freight.** Our facilities for shipping are of the best. We ship by freight to every state in the **Union.** We have 40 per cent more glass this year; most of our glass is devoted to palms. We are particularly strong in the **larger sizes, (7, 9 and 12-in.)** We grow all our Kentias, above 6-in. sizes, in **cedar tubs** made especially for us, **avoiding breakage of pots** in shipments and **giving better satisfaction to our customers;** and while they cost us several times what pots would cost, we sell them for the same money; they are the neatest, lightest and best tub ever introduced painted green, with three electric welded wire hoops. We order these tubs by the carload.

Order Now for Fall Delivery. **When in Philadelphia, call and see our stock before placing your order. 20 minutes ride by rail; 50 trains each way every week day; Railway Station Jenkintown.**

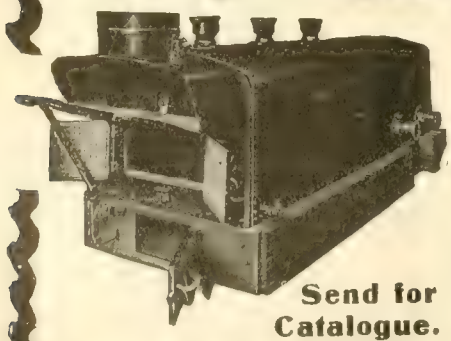
What the Users Say



Send for Catalogue.

Fired Boilers Since 1885---The Kroeschell is the Best of All.

"Have fired greenhouses boilers since 1885, both steam and hot water. Yours suits me the best. I have two of your boilers. At one time I had two cast-iron boilers working together and during a blizzard the rear section of one boiler gave out and the front section of the other sprung a crack a couple of months later. No more cast-iron boilers for me. I came very close to freezing out in both instances."

G. M. THOST, DeSoto, Mo.

KROESCHELL BROS. CO., 452 W. Erie St., Chicago, Ill.

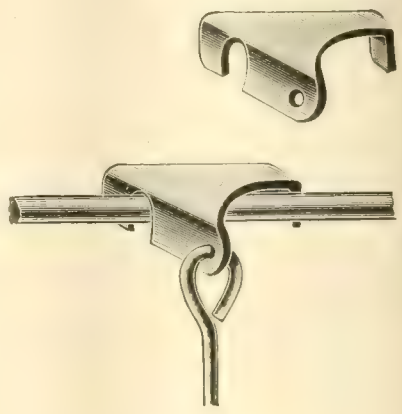
FISHER
Carnation Clips

All carnation growers know the trouble and cost of supporting carnation plants by the use of string. It is a long, weary job for two men and it must be done several times a season for the plants grow and need additional support. With the use of the Fisher clip the plants are better supported, the work is cut down to at least ¼ the labor and best of all the clips can be used this year and next, in fact as long as you grow carnations, and you do not have to buy string each season.



Fisher Clip.

Inexpensive Method to Support Carnation Plants.

Stretch No. 18 galvanized wire the length of the bench between each row of carnations, but let the two outside wires over the sides of the bench be of No. 10 galvanized wire. Then cut No. 18 galvanized wire into lengths the width of your bench and on each end fasten a Fisher Clip. Two men then can walk along each side of the bench and clip the cross wires on the No. 10 side wire with the Fisher Clip just as fast almost as they can walk. It is understood, of course, that each cross wire is put between each row of carnations, thus forming in connection with the length wires a square frame or square support for each plant.

As the plants grow and need more support a second set of wire stringers are run the full length of the bench between each row of the plants and over the first set 5 to 7 inches, as needed.

On this second set of length wires are clipped by the use of Fisher Clip cross wires of No. 18. If a third set of wires are necessary to support your plants they can be placed in the same manner. When your plants are ready to throw out the cross wires with clips in each end can be readily taken off the No. 10 side wires, bundled and put away until the next planting time comes and they will be found ready to use again.

The Fisher Clip is easily fastened to the side wires literally with a "grip of steel;" they will not slide, but are warranted to hold just where they are clipped in place. They are made of heavy sheet steel and are copper plated to prevent rusting and are time-savers, for two men working with these clips can string or support as many carnation plants in an hour as it takes two men five hours using the old white cotton stringing method. Also consider these clips in the light of an investment, for once purchased they will last as long as you grow carnations.

Here Is What It Will Cost.

Calculation, based on a bench 100 ft. long, 5 ft. wide, planted to carnations consisting of 6 rows with 120 plants to a row. This means:

500 ft. of No. 18 gal. wire for length wires, 3½ lbs. at 5½c per lb	$ .20
200 ft. of No. 10 gal. wire for side length wire, 10 lbs. at 3½c per lb	.35
600 ft. of No. 18 gal. wire for cross wire, 4 lbs. at 5½c per lb	.22
240 Fisher Clips, 2 for each row, 1 on each side of bench, at $5.00 per 1,000	1.20
Cost for first set of supports	$1.97

As three sets of wires and cross supports are generally used, the total cost of supports will not be over $6.00 to furnish ample support for 720 carnation plants, on a bench 100 ft. long by 5 ft. wide, and there will be no additional cost to you next year.

Compare This to the Cost of the Wire Ring Supports.

A three-ring support that will support two separate plants costs about $32.00 per 1,000, or $1.60 for 100 plants, or **$11.52** for a bench of 720 plants, against a cost of **$6.00** by using **Fisher Clips,** a saving of nearly 50 per cent, and you will find that supporting your plants with cross wires fastened by the Fisher Clips is more satisfactory than any other method.

PRICES.

Fisher Clips, per 100, 60c; per 1000, $5.00.
TRY A FEW AND SEE IF OUR CLAIMS ARE NOT SUSTAINED.

E. H. HUNT, General Agent, Chicago

They are our shadeless ridge type, 57 feet wide, 400 feet long, and 23 feet 6 inches at the ridge. The sides are concrete, capped by a cast iron sill. The Wrought Iron Posts are bolted to the rafters by a special gusset plate. These posts are imbedded in the concrete sides, and extend into concrete footings 2½ feet below grade.

It's the L. & B. Iron Frame Greenhouses That Stand Up Under the Hard Storms

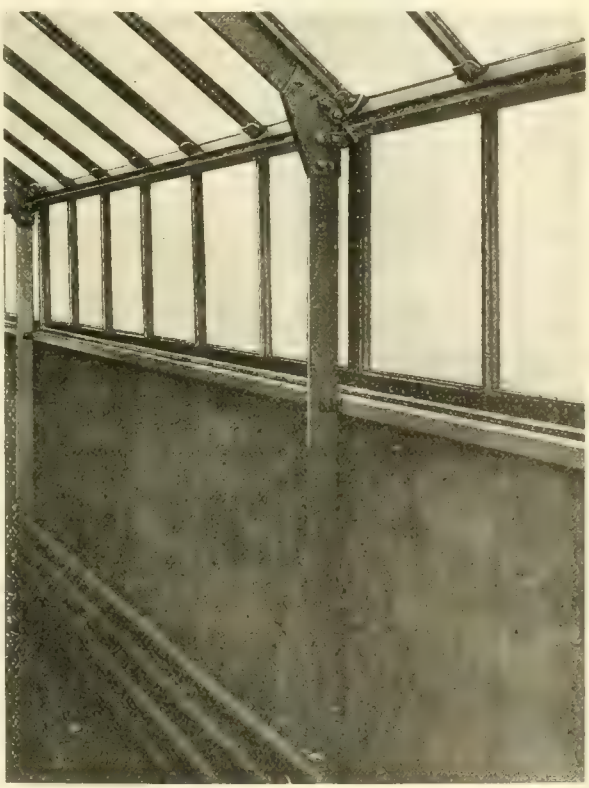
AND why? Because the frame work is made of guaranteed wrought iron, put together on designs we have taken years to develop.

The flat iron rafters are giants for strength, but practically shadeless—with angle iron purlins for bracing.

The eave plate is galvanized steel—ice-clearing and enduring.

The side posts are flat, guaranteed wrought iron, bolted to the rafters with double steel gusset plates. They are set three feet in solid concrete. Can you beat that for solidity and strength?

Can you afford not to build L. & B. Iron Frame Greenhouses? Cost more than wooden houses? Of course they do in the beginning; but how many times over do they save their additional cost in few repairs and small upkeep?



A Cyclone Proof Construction.

Interior side view, showing method of securing the rafters to the Guaranteed Wrought Iron Post by double gusset plate. The Galvanized Ice Clearing Eave Plate is equipped with a V-shaped drip gutter. The roof bars are secured to the plate by cast iron clasps.

Think it over. We have just published an Iron Frame catalog. Send for one. It will convince you quickly that there is just one best greenhouse for the grower who looks ahead a few years—it's the L. & B. Iron Frame Greenhouse. It stands like a rock.

Trouble Talk

It being the sad case of Tom, a man you all know and whom some of you have employed.

Yesterday afternoon, while in Detroit, I had three hours before train time, so got permission to go through one of the largest automobile factories. The Superintendent himself piloted me about.

In the last department, through which we passed, they were testing up cylinders and we suddenly came upon two men sitting down. Promptly the superintendent said, "Hello, Tom, what are you doing?" "Nothing," replied Tom, honestly and sheepishly. "And what are you doing, Charlie?" he asked of the other man. "Helping Tom," was his reply.

Quick as a flash came into my mind the sad case of a grower on the outskirts of Cleveland whom I dropped in to see one day last January. Found him wetting down his roses in that kind of hurried, crowded way, as if there were a hundred other things he had to do and couldn't wait to do any of them. Finally he did stop long enough to say that "business was going to the dogs; labor was high; coal was high, and the bottom had fallen out of the market."

When a man starts that game of talk, I just about know that either he is a poor manager or a dreamer. So, just to convince myself, got his permission to poke about a bit.

Did you ever notice how some men are always blaming **things** for their lack of success; and how the successful men always blame **themselves** for not being more successful?

This Cleveland man **blamed things,** and he never had time to stop and figure out whether he was barking up the right tree; no, not even whether his boiler was burning too much coal. He bought the boiler for a good boiler, and that ended it. He would keep on using it till it wore out. Discarding a good thing **for something better** was the first step towards bankruptcy in his mind. He had had that boiler for eight years, and after inquiring of one of his men the amount of coal burned each season, I did a little figuring and worked it out that he was burning about $200 more coal each season than he needed. That was $1,600 for the eight years. Not only was the boiler inefficient, but he had skimped on his piping, and so he had to keep the coils red hot to hold up temperatures. That meant hard forcing of the boiler. Still, he was so busy **trying to make money** that he hadn't time to do a little **figuring to save money.**

Just as sure as you live, that man is helping Tom. He is tied fast to a poor boiler and a wrong piping and all the time he keeps on growling about the coal he burns but he does nothing about it. He is helping Tom. Tom gets lots of help, and some of you right now are helping him, and don't know it. How about you? Who are you helping? Why don't you make sure and have your heating thoroughly gone over and find out if it really is all right? You may think it is — but is it? And don't put it off till firing time — do it now. I can come any day except Tuesday or Friday of next week. Our charges for this kind of **prove up work** are most reasonable. Send for me. I'll kick Tom out.

Address your letter as usual to

The Trouble Man

Hitchings & Co., Elizabeth, N. J.

Next week's will be a swing talk. It shows the difference between "running under" and "letting the old cat die."

Sketch will have nothing to do with cats. The swing will be the one up in the orchard.

Aphine

The Insecticide that kills plant Lice of every species

Just the remedy for the black aphis on chrysanthemums—red spider and thrips on carnations—greenfly on roses—mealy bug on gardenias and crotons—scale on ferns, palms and other decorative stock.

$2.50 per gallon; $1.00 per quart.

FUNGINE

Fungine has has no equal for carnation rust, rust on chrysanthemums and mildew on roses

$2.00 per gallon; 75c per quart.

There is but one convincing way for you to become familiar with the merits of Aphine and Fungine, and that is—test them out yourself—it will prove worth your while.

Comin' On October.

It's a-comin' on October an' th' woods is gettin' yaller;
Sort o' hazylike an' lazy to a dreamy sort o' feller.
They's a jay a singin' sassy on a pin oak by th' gate,
An' a katydid a-fiddlin' "Gittin' later! Gittin' la-ate!"
They's a gum tree turnin' purple an' a maple turnin' red,
An' the' beech leaves is a brownin' like as if th' tree was dead.
Oh, it's wine instid o' blood drops that's a-pumpin' round in me,
'Cause it's comin' on October an' I'm glad as I kin be.

Sky's bluest in th' middle—sort o' grayish round th' rim,
While th' furder hills is purplish an' their sides is kind o' dim.
Every sumac is a-blazin', like th' bush that Moses seen
When he had t' take 'is shoes off an' go barefooted on the green.
Chestnut burrs is gittin' bigger, ground is strewn with akern cups,
An' the whole blamed world is purtier'n a brace o' spotted pups.
I'm forgettin' that I'm forty an' rememberin' I'm 'leven,
'Cause it's comin' on October an' I'm shoulder deep in heaven.

SUGGESTIONS FOR PLANT GROWERS.

Hydrangeas.

The hydrangea plants in the field should be now potted and made ready for winter quarters. If the plants have still a strong succulent growth they can be left standing out where the wood will be given a chance to ripen off. After potting they should be given a good watering that the soil may be settled around the roots, but after that the plants should be sparingly watered. The main object at this time is to harden the plants off and ripen them up. Never mind if the foliage wilts to some extent, for it is desirable that this should all drop off before storing away for the winter. A few frosts will be of benefit, but as the weather is uncertain they should be placed in a position where they can be conveniently covered and protected from a severe freeze. While it is desirous to harden up the wood and plump up the flowering bud yet too hard a freeze will kill the bud. As soon as well ripened they should be placed in cool quarters, where they will remain dormant until it is time to start them.

Cannas.

As soon as the frost kills the cannas, preparations should be made for the storing of the stock plants for next year. The tops should be cut off about six inches above the ground and removed from the field and not left lying around to attract cut worm millers. The roots should be dug and each variety should be carefully kept separate so that there will be no chance of their being mixed another season. Unless the weather is very severe they can be allowed to dry off a little before being housed, but if there is any chance of the night temperature dropping below the freezing point it is much better to get them under safe covering at once. Under a bench in a cool house is one of the best places to keep them during the winter months, but if the soil under the bench is inclined to be moist, boards better be placed running lengthwise of the bench and the canna roots placed upon these. They must, however, be looked over occasionally to see that they do not run too dry, for there is just as much danger of losing the plants by their drying up as there is by their rotting from an excess of moisture. In placing the clumps under the bench set each variety by itself and leave space enough between it and another variety that it will be impossible, no matter what may happen, for them to get mixed. Mark each variety with a label, written plainly and in full. It takes but a few seconds longer to write the name in full and abbreviations are to be deprecated; we have known cases where the man who always does things in a hurry to abbreviate the names so short that when he tried to read them six months later could not make out what name he intended to write. This is often a case where "haste makes waste." Attach the labels in such a manner that they will not become misplaced or lost.

Early Firing.

"Economy is wealth," this maxim has been drilled into the young for generations, but false economy is waste. And to put off starting the fires until all the plants have cold feet, and have received a check that is going to take them two or three months from which to recover is false economy. As soon as the temperature in the house drops below the point at which they should be maintained, it well pays to start the fires. Many nights at this time of the year at eight o'clock the temperature outside will be above 60°, but by morning it has dropped to 40°, and if the houses are closed the glass will be covered with moisture, the house cold and damp. This condition is not at all conducive to good growth, and gives the plant a check from which it often takes it some time to recover. It is far better and a money-making proposition to have the fires going and the proper temperatures maintained. The small expense of a little coal burned and the few weeks' wages of a night fireman that are necessary will be more than made up in the excellence of the crop. At this season of the year there will occur cold, stormy days when a little heat will be necessary to keep up the growing temperature all day. This

is the time to look over all the piping and see if the boilers are working right. If steam heat is used see that none of the pipes have dropped from their fastenings and have made pockets in the circulation. If this has happened, fasten them up and straighten out the flows. Turn on the valves and see if they leak, and if they do repack them; in fact it is good policy to repack all valves every fall, whether they actually need it or not, for they will require it before the winter is over. This early firing will also give the opportunity to spread sulphur and nicotine extracts on the pipes and keep the insects and mildew from getting a foothold. Looking at this question from all sides, early firing is an economical proposition and should not be neglected.

The Late Paul de Longpre.

The funeral services over the body of the late Paul de Longpre, notice of whose death and obituary were published in THE AMERICAN FLORIST issue of July 8, page 1230, were simple but impressive and were held at 1051 South Grand avenue, Los Angeles, Calif., July 1, at 2:30 o'clock. Loving flowers passionately all his life it was but fitting that when he came to die he should will that his bier bear no somber symbols of his passing, but only the brilliant blossoms which for 40 years had been his study. It was also his wish that his family, consisting of a wife and three daughters, should wear no garments of mourning. "Paul de Longpre, notwithstanding his great success no doubt died a disappointed man," writes his friend, Frank F. Stone, the sculptor, in describing his many disheartening experiences with people who assumed to be patrons of art and admirers of his work. "They will pester you for years," De Longpre said, "with pretended appreciation. They will tell you again and again how that particular 'little bit,' that 'Marechal Niel rose' or that 'exquisite lily' was 'positively haunting' them. They would really 'have to purchase' it—sometime—a time which never arrived." These and many other experiences he told with a smile and a shrug but there was bitterness behind the smile—disgust behind the shrug.

Paul de Longpre had a great ambition to incite America to the establishment of a national art gallery and school of painting. This was his big dream, he had dwelt upon it until it had crystalized in his thoughts, and he could see the institution of his hopes spreading a knowledge of art, promoting the culture of a nation, and lifting it above the sordid strife for mere gain. He addressed open letters to all the leading papers in the country, Ex-President Roosevelt, President Taft and all the senators and congressmen, in which he voiced an indignant protest against the ignoring of art by the United States government, and drew a most striking picture of the wideness of contrast between the immense wealth of the country and its artistic poverty.

MARIETTA, O.—The Marietta Floral Co. opened their new store, 121 Putnam street, and Mrs. E. C. Holz will be in charge. The company has made extensive improvements on the greenhouses on Muskingum road.

THE RETAIL TRADE

Conducted by Robt. Kift, Philadelphia, Pa.

Retail Notes.

The unsettled condition of the stock market seems to have put a check on the flower business. Flowers are a luxury, and must always suffer in consequence.

Decorate the windows, and show all the skill possible in this line. Notice how the department stores feature their goods in comparison with the florist. Show the passerby what there is and how it can be arranged. This is what counts.

Don't expect a prospective customer to hunt anyone up with a spy glass. In these strenuous times he could only buy the glass and not the flowers.

Qualifications of a Store Man.

We have often noticed in the advertisements in the trade papers the offering of a position for a man possessing all the good qualities of salesmanship, designing and decorating with a salary of anywhere from $12 to $25 per week. Now, we have always considered that these three departments of the retail business required three different men. Where a proprietor has employment but for one good man, he must of necessity have a versatile one, for he is, in fact, a manager; and all managers must necessarily be thoroughly posted to be able to distinguish right from wrong. We will now endeavor to make our views plain under these three different headings and will first take up the necessary qualifications of a salesman.

First of all, an attractive personal appearance is an absolute necessity in handling good trade. No customer, either man or woman, cares to have a salesman wait upon them who has an unhealthy appearance, wears shabby clothes, or has an onion breath (eaten either as breakfast food or a chaser). He must be little short of a mind reader, that is, quick to grasp the customer's idea of that which they desire, never suggesting unless a customer so requests or seems undecided. He must be able to figure the wholesale and retail cost of decorative and design work and be able to tell at once at what price the work can be done. He must know the cost of everything, even the daily supply of stock, without being compelled to consult the bills. He must be pleasant and cheerful at all times when on duty, and make it a pleasure for a customer to enter his employer's place of business. He must be prompt, making frequent inquiry as to how this or that particular order is coming on or being cared for, even after being informed that it has been sent on its way verifying the same, for orders and delivery are often overlooked at times, in spite of every earnest effort. Never be subservient, it lowers one in the eyes of a customer and they lose their confidence in the salesman. Of course, some people are overcome by their own greatness, they must be handled, each in accordance with his or her particular delusion.

A good salesman must obtain an honest profit on everything he sells. He must have a standard price that will sell the goods and at the same time hold the customer. On large thoroughfares, where transients are a principal source of business, high prices are often asked. If a good sale is made, it does not pay to cheat the customer; give them other little attentions, that is, for instance, in arranging a box of choice roses or other flowers, scatter a few loose violets, lily of the valley or pansies, or some of each, over the stems of the flowers. The customer will notice this attention and should he be given lower prices on the same articles at another establishment will not come to the conclusion that he has been cheated.

Dishonest business methods do not last, those that are successful are the honest ones. Always be willing to make good when in the wrong. In conclusion, a salesman must be honest with his employer, for if the proprietor is a man, he will appreciate these qualifications and see that the salesman is well taken care of. If he is not—it is better to look for another position. STOREMAN.

October Flowers in the Chicago Stores.

The advent of October makes a great change in the appearance of the flower stores. The palms and decorative plants which have occupied a prominent place in the window displays have now been placed farther back in the store and used as a background, the summer flowers have been replaced by the finer greenhouse product and there is an expectant air of business on every side. While trade has not as yet shown any great signs of activity, yet the dealers are all optimistic and are looking forward to a busy season.

The roses this fall are of splendid quality and are a great feature everywhere. American Beauty is in splendid form, and large vases of beautifully colored buds are to be seen arranged in the window displays or around the stores. Richmond also is in grand good shape and the bright red flowers adorn the counters and refrigerators. Killarney is to be seen in large quantities and the color is excellent, and when this rose is half open is an attractive ornament in the display. Mrs. Marshall Field and Mrs. Jardine are also to be seen in fine form. White Killarney is as good quality as the pink parent and the color is good, and some very fine Kaiserins are also seen. Some very beautiful Perle des Jardins are now displayed, and the newer rose, Mrs. Aaron Ward, is becoming very popular, very pretty baskets of this rose being arranged and displayed.

Carnations, notwithstanding the poor growing season outside during the summer months, are producing flowers of far better quality than are generally seen so early in the season. Enchantress seems to have lost none of its popularity and is yet the standard variety in light pink. Washington seems to have pushed Mrs. T. W. Lawson out of the running, the flowers being larger and the stems longer than that old favorite. White Enchantress is the popular white, but a few White Wonder are seen that give promise that this variety will take a prominent place on the counters displacing White Perfection and the older varieties. Beacon is still the prominent scarlet, although splendid O. P. Bassett are also shown. There appears to be very little demand for the crimson shades and but few of these are used by the prominent retailers.

BLACK-EYED SUSAN AND OTHER WILD FLOWERS.

Reproduced from Study by the Late Paul de Longpre.

Orchids are being prominently displayed and arranged in the high class work, some very beautiful blooms of Cattleya labiata and sprays of Oncidium varicosum Rogersii are to be found in all the stores and add greatly to the season's assortment. Lily of the valley of unsurpassed quality is one of the flowers always on hand and retains its popularity for all purposes. Chrysanthemums are now to be seen at all the stores, Golden Glow is as yet the only yellow, but October Frost as well as Smith's Advance are offered in white, the former being the favorite. Lilium giganteum of excellent quality are the mainstay for large funeral and decorative work. Cosmos in long sprays make an effective display, both in the pink and white shades. Violets are to be seen but they are as yet far from being first class, the bunches as well as the flowers being small. A few sweet peas are seen but not of the best quality. Dahlias, while not as good as they have been seen in some years, are displayed to great advantage and are used extensively in decorations, baskets and designs. Gladiolus are still shown and some extra fine spikes are noticed at the prominent stores. Of other outside flowers there are gaillardias, calendulas, heleniums and tritomas which supply a variety of high colors. Much of this stock has been used in the large decorations at the department store openings.

All the stores are supplied with a fine assortment of ferns, the different varieties of nephrolepis as well as smaller ferns and a fine array of the china fern dishes, as well as palms, dracaenas and other decorative stock. Some finely grown celosias were noticed at one of the stores. The French baskets are used extensively and beautiful arrangements of these are seen and are very attractive to the customer, and colonial bouquets are also a feature in the windows and on the counters. The stores have been renovated, many improvements in fittings made, and are already for the coming winter trade.

Bouvardias.

As the weather becomes cooler the pinching back of bouvardias should cease and the flowering shoots be allowed to grow. The plants should be well established in the bench or pots and making good growth. Give them a cool, light situation and with all the ventilation possible; these plants are of cool nature and relish plenty of good fresh air. If grown too warm, bouvardia soon becomes infected with insects and stops flowering, and the plants are quickly ruined. Keep the soil free from weeds and well stirred on the surface, and be careful not to overwater until the roots have filled the soil. Keep a lokoout for both aphis and red spider, the aphis quickly cover the soft, tender growths, and if the weather is warm the plants become quickly infested with spider. Constant syringings and frequent fumigation is necessary to keep these pests in check and insure a good crop of flowers. Keep the plants tied up in shape that the stems may be straight and erect.

SEDALIA, MO.—C. A. Claison, foreman of Archias Floral Co. greenhouses, has been appointed superintendent of Floriculture at the Misouri State Fair, to be held September 30-October 6.

ADIANTUM HYBRIDUM.

FLORISTS' FERNS.

Nephrolepis and Adiantums.

The various nephrolepis occupy much space and attention at this season, the first crop being now in good condition for the market, if not already sold, and the second lot being, or should be, in condition for potting on, in order to make the most of the growing weather that may be expected during September and October.

If the young stock is rather small, it often pays to double them up when repotting, thus getting a more compact and bushy plant than may be had from a single crown, and at the price that two and three inch ferns may be had, the doubling or trebling of the plants does not make them very expensive to produce. As the first crop is disposed of it is good practice to space out the remaining plants from time to time, at the same time cutting out any bad fronds, and clipping off the runners, for the latter simply take away some of the strength that should be thrown into the foliage.

Full light and plenty of air and water are needed to keep this crop in good condition, and if the plants are getting starved an occasional watering with liquid manure will be found beneficial. Liquid from stable manure is the safest fertilizer to use, though some growers resort to dried blood in solution, and with good results, so far as growth is concerned, though the plants that have been overfed with these strong fertilizers do not wear as well as those that have been treated more rationally.

There are still many growers who plant out the nephrolepis on benches, lifting and potting them in the fall, but many of the plants thus grown are sent out before they are re-established in the pots, and in that case do not prove so satisfactory as the pot-grown stock, the latter standing the atmospheric hardships of a dwelling much better, giving the ultimate consumer more satisfaction, and encouraging him to reinvest in ferns in the future.

The question of varieties is one that varies in different localities, some markets favoring the original Boston fern, when this fine variety is well grown, while others seem to prefer the dwarfer forms, such as Scottii and Scholzeli, the latter being much in favor about New York. The various cut-leaved and crested forms also have many friends in the trade, and most of these forms are very beautiful, but speaking in a general way it may be said that these fancy leaved nephrolepis are not as good house plants as the plain leaved types. If one wants to grow a large specimen nephrolepis then N. davalloides fureans is a good one, or should one desire an exhibition fern that would be a little out of the common, a nicely grown plant of N. rufescens tripinnatifida would supply the need, but for a plain every day fern that may be easily grown, and quickly produced in quantity, there is nothing to equal the Boston fern.

Adiantums that are grown for cutting should now have plenty of light, and as much air as the weather will permit, for although the fronds produced in the shade are larger and richer in color than those grown in the sunshine, yet the latter are much more satisfactory to use in decorative work. In ventilating these ferns it is well to avoid direct drafts but to give an abundance of air both day and night, and especially at night, so long as the weather will permit, else the moisture is liable to condense on the foliage and to turn it rusty.

A new bench of adiantums, that is one planted this season, is not likely to need any extra feeding yet, but a bench more than a year old may be benefited by watering with liquid manure at in-

ADIANTUM CROWEANUM.

tervals of two or three weeks, but should not be fed in this manner except while the plants are in full growth, which means that it is not good to try to start a new growth with manure after the crop of fronds has been cut.

If fronds for small design work are the aim it is difficult to find a more useful fern than Adiantum cuneatum, but if larger fronds than these are desired, it would be better to grow A. Croweanum, A. hybridum, or A. tenerum, the latter being the strongest grower of the three named. Adiantum Ghiesbrechti is also grown for fronds to some extent, though possibly more used in Europe than in our own country, the fronds of this species being almost as ornamental as those of A. Farleyense, and much hardier. This species will possibly be more readily recognized by many gardeners under its more common name of A. scutum.

But whatever adiantum be grown for cutting, it should have light and air, and a good firm soil containing a liberal supply of plant food, for the fallacy that ferns could not stand manure has long been exploded. And the cut fronds will last longer if they are soaked thoroughly in a tub of water for some hours before using.

W. H. TAPLIN.

NEWPORT, R. I.—The exhibition of the Newport Horticultural Society which was held September 16-17, was conceded to be the most successful in the history of the society.

LOWELL, MASS.—The florists of the city have been notified by the police board that they will not be allowed to keep their shops open until Sunday noon. They may receive orders until late Saturday night and make up and deliver these until 11 a. m. Sunday, but the shops must not be open at all on Sunday, except to fill orders.

A New Adiantum Farleyense.

This beautiful fern, A. Farleyense var. Gloire van Moordrecht, which we illustrate, appears to have been raised from A. Farleyense in the nursery of J. Bier, at Moordrecht, in Holland. A. Farleyense has hitherto been regarded as barren, though possibly it has produced spores here and there, unobserved, but the remarkable thing is that this new variety is abundantly fertile, and its pinnules are prettily crisped. The fronds are larger than those usually found in A Farleyense, stronger, less dense, and rather more elegant, though not more beautiful. A. M., R. H. S., January 31. Shown by A. A. Fabius, Redlands Nursery, Emsworth.

Referring to this new fern, Charles T. Druery writes as follows: "That queen of all the maidenhair ferns, Adiantum Farleyense, which originated in Barbadoes as a sport from A. tenerum, has long been reputed as perfectly barren, and its true plumose form justified the belief. From time to time, however, vague reports of partial fertility have transpired, but as no results were obtained from the presumed spores they were apparently fallacious. On January 31, however, a very fine variety of A. Farleyense was exhibited at the Royal Horticultural Hall, by A. A. Fabius, Redlands Nursery, Emsworth, under the above name, it having made its appearance as a sporeling from A. Farleyense in the nurseries of J. Bier, at Moordrecht, in Holland. The plant shown was very robust, with fronds several feet long, borne more erectly than those of the parent, and with the pinnules prettily crisped, many of which were freely fertile, while the spores, as evidenced by small seedling specimens, produce the Glorie form truly. It is claimed by the grower that this form requires far less heat than does A. Farleyense, the huge specimen shown having been fully developed under the cool culture suitable for A. cuneatum, a feature which adds considerably to its value as a popular contribution to our wealth of decorative ferns. It was given an award of merit, but would have fully justified a first class certificate."—The Gardeners' Magazine.

Hybrid Ferns.

The recent paper by W. D. Hoyt on the physiological aspects of fertilization and hybridization of ferns noticed in an earlier number of this magazine, says The Fern Bulletin, has stirred up those botanists who view every variation from the normal as a possible hybrid. Hoyt grew the prothallia of several species to maturity and while he secured the entrance of foreign sperms into the archegonia of various species he secured no hybrids although he used in some of his experiments the very ferns reputed to have been bybridized by earlier investigators. His paper has been attacked by R. C. Benedict in Science, who is inclined to ridicule his conclusions because he took the precaution to have W. R. Maxon identify some of his material. Hoyt began his studies at the New York Botanical Garden but declined to be swayed in his judgment by certain reputed hybrids in the wood ferns which probably accounts for the reception given his paper. Those who advance the hybridization theory to account for every variation in ferns admit that they have no proof of such a condition, but at the same time are inclined to ridicule careful experimental work because it is not in line with their conclusions.

Fragrant Bracken.

In Eaton's "Fern of North America" a decidedly fragrant form of the common bracken (Pteris aquilina) is reported from Illinois. The form must be very rare and so far as we are aware has not been reported in any other fern book though the plant is distributed nearly throughout the world. If any of our readers know of this species being fragrant, says the Fern Bulletin, we would like to hear from them. Like many other ferns, the bracken when young is glandular pubescent and in addition nectaries are produced at the base of the pinnae though there is no known use for them. A large black ant is very fond of this nectar and specimens are seldom free from the insect in spring. In flowers, odor is usually associated with nectar and the fragrant bracken mentioned may have been specimens whose nectar possessed this additional characteristic. At any rate, the subject is worth further investigation.

NEWPORT, R. I.—Mrs. Burke-Roche has offered through the Newport Horticultural Society prizes for a new yellow rose and a new yellow carnation to be awarded at the exhibition of the society in June, 1912.

LYNN, MASS.—The opening of the new store of Gibbs Bros. at 231-33 Union street was attended by 3,000 people. The store is beautifully decorated, has up-to-date lighting effects and a conservatory at the rear for the display of plants is an added feature.

THE ROSE.

Carrying Roses Over Two Years.

There is usually more or less uncertainty with the rose grower as regards carrying over some of the stock for the second year; or perhaps the third year,—this is especially true when one is contemplating this work for the first time. Therefore a few suggestions may be of some help in settling or deciding the matter. In the first place the plants to be carried over should be in a healthy condition, free of club root and containing sufficient growth to cut back or prune into shapely plants. There are several methods of handling the plants and if the work is carried out intelligently in each instance there is no reason why the results will not be entirely satisfactory in the way of profit.

First we will assume the grower has a house of roses that are in excellent condition yet he finds that the soil is about exhausted, he has not enough young stock to replant, and he is doubtful about getting the kind of stock he wishes to grow. We will say this house in question contains raised benches and very little head room. If this should be the case the grower will have to resort to the well known method of tying the plants down. First of all, whether the plants are to be removed or left where they are, they should be rested a while. By holding off the water a little, yet still keeping up the syringing, within a few days, 10 days or so the plants will be in a fair condition to remove or to prune and lay over, that is, the bench stock, solid beds require a much longer resting period. We thing it a very great mistake to give the plants too much of the drying treatment as we think they lose too much vitality from this cause, taking a much longer time to recover. Two weeks will as a rule be long enough for the benched plants and a month for the plants in the solid beds, a little more or less either way which must be left to the judgment of the grower, however, as a precaution never let the foliage or the wood shrivel or wilt, and let all the flowers remain to help ripen the wood up properly, this is very important.

Of course, the old soil must be partly removed from the benches and renewed. We advocate using one-third good cow manure to two-thirds good loam or sod soil, to which should be added a liberal supply of bone meal—it is best to have this compost prepared ahead of time, so as to have it in good condition when it is needed.

After drying or resting the plants prune carefully, trimming out all the twiggy or turgid growth at the base of the plant—and if head room is sufficient to let the plants stand they can be cut a little lower than would be the case where the canes are to be laid down. Do not imagine the plants should be cut off all one height but look each plant over carefully and hold on to the strong canes with firm eyes, which if pruned properly will leave the plants looking rather irregular.

After pruning get the working force together, employ a few extra laborers so as to handle the soil rapidly, clean off about half of the old soil, first tying the plants out of the way, being careful not to break the roots, have a good clump of soil around each plant taking the old soil almost down to the bench bottoms between the plants, do not leave the root exposed to the sun and air any longer than necessary, and we usually give the plants a syringing and the clumps a little water just before filling in around them with the fresh soil. Be sure to firm the soil after filling the benches, also be particular about leaving the surface level and a little higher at the center of the benches which is apt to settle more than at the edges. Give the beds a good watering and be sure that the whole bed has been reached by the water. Then syringe twice a day, holding off the water until it becomes a little dry at the surface, a moist condition of the soil is preferable (until the plants begin to make roots freely), having the soil too wet will invariably cause the plants to break, weak with streaked and yellow foliage.

When tying down the plants to gain head room prune as prescribed above, excepting when there are some especially strong canes where the wood is best high on the plant, hold on to these canes and tie the plants over to running wires about a foot above the soil, care being taken to distribute the wood evenly over the trellis, using the same treatment as regards the soil as given above.

If the plants are to be carried over in the solid beds the pruning will be practically the same. The difference being that they had best be pruned after planting. Do not remove the stakes but tie each plant in closely, lift with a good ball, and be sure to plant them deep enough in the solid beds. Fill the beds within about two inches of the top with regular rose compost, then have a man on each side of the bed to open up a trench deep enough to take the plant easily. Space the plants carefully, then pull the loose soil in and around them. They can be planted firmly by walking around each plant and pressing the soil down hard. Then level up and give the beds a good soaking. Do not plant over 30 feet of the bed before leveling up and watering. After planting the house put in the running wires and tie at once. Of course, some of the young growth will be bruised and the plants shaken up considerably even with careful handling. This will do no harm for within a short time they can be gone over and shaped up with the pruning shears. This method of handling roses, regardless of the varieties to be handled, has been a success wherever we have seen the work handled as given here, with perhaps the one exception, American Beauty. This rose, we believe, will give better results if planted every season, using fresh stock from pots. The above methods apply to the handling of the standard varieties, namely, Killarney, White Killarney, Richmond, etc. E.

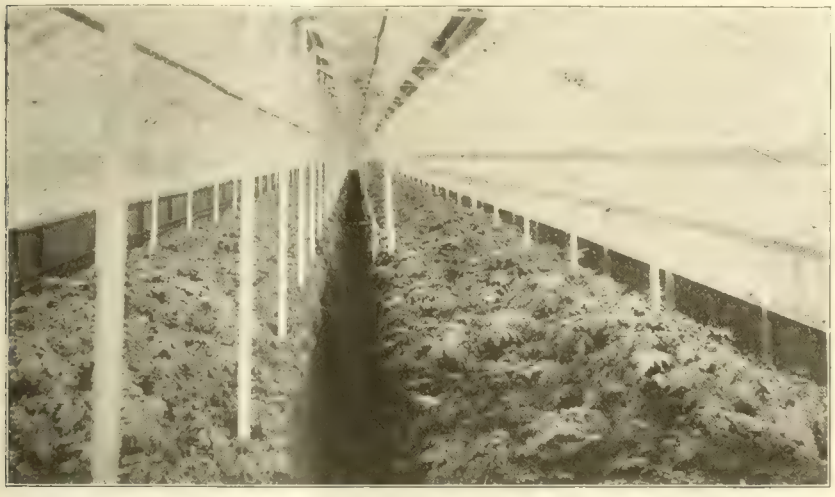
Roses in Pots.

If we want a good display of cut roses during the winter months, we must look well ahead and commence operations at once. Two plans may be adopted. We may start with ripened wood during November, or keep the plants growing steadily on the cool side of a wall or hedge until the cold nights warn us they must be housed, and so realize the last crop of blooms on teas and their hybrids. But if the same plants are wanted to give a second or third crop of bloom early in the year, I would prefer to start with plants that have had a partial rest.

When a batch of plants has once been used for forcing, they come to hand better for the same purpose a second time, states a correspondent of the Gardeners' Magazine, as their early growth allows earlier ripening of the wood and the consequent rest thus afforded. Plants that were growing all through winter and early spring may be stood out of doors by June, if given a sheltered position, when with careful watering the natural freedom of summer growth is somewhat

ADIANTUM CUNEATUM.

checked. It is most essential to build up ripened wood for the following winter flowering. In fact, more depends upon the water supply than many apparently consider. If too dry we injure the roots, and it is surprising how very quickly the soil in pots becomes parched during summer, much of which can be guarded against by



ADIANTUM FARLEYENSE AT A. N. PIERSON'S, CROMWELL, CONN.

partly plunging the pots. Less water will be needed to the soil the rose roots are in if we water the plunging material between the pots.

To stand the plants in a sunny position is favorable, but to allow sun and wind direct access to the outsides of the pots cannot fail to injure the roots upon many occasions, as a large proportion of the roots will be touching the inside of the pot. It is well to have the plants in two batches; the earliest being overhauled now, and what repotting that may be needed attended to at once. At the same time the ripest may be pruned. Keep the newly-potted plants by themselves. These will not want so much water until the fresh roots are at work, nor will they need stimulants until the fresh soil is thoroughly permeated with roots. Then there is the question of drainage, which must be complete. There is no need to turn the plants out of the pot to ascertain the condition of this, as it can generally be seen by laying the pot on one side and examining the drainage hole.

Where repotting is not considered necessary, it will be found an excellent plan to remove a little of the surface soil and mulch with a strong compost, which will not only support young roots as the plants commence to grow, but help those below by the steady feeding naturally washed down when watering. A deep pit or frame is a suitable place for the pot plants at this stage, as we can then keep off heavy rains, and also afford a little shade and shelter from wind.

PAXTON, ILL.—Addems, Morgan & Co. suffered serious loss in the hailstorm here last month.

NEW YORK.—Peter Piorkowsky, a florist of Port Chester who was quite deaf, was struck by an electric car September 16 and his skull was fractured. He was removed to the hospital and his condition is serious.

The J. M. Gasser Co., Cleveland, O.

A neat folder issued and distributed by the J. M. Gasser Co., Cleveland, O., contains a brief history of the building of the present large establishment which the firm now conducts.

The foundation of the business was laid by the late Joseph M. Gasser in 1877 when he opened a small confectionery store on West Twenty-fifth street, then known as Pearl street, where flowers were sold incidental to the regular trade. At that time there were no greenhouses in the city growing cut flowers, and abutilons, geraniums, callas and others of the same class grown as pot plants were the only flowers obtainable, except roses such as Safrano, Bon Silene and Isabella Sprunt, grown by the leading florists of Boston and shipped in, and violets and hyacinths in the spring.

Recognizing the rapidly increasing demand, Mr. Gasser opened the first florist store in Cleveland for the sale of cut flowers in 1883, on Euclid avenue, and having difficulty in getting efficient service, especially when hurried orders were desired, decided to erect his own greenhouses, which he located at Rocky River in 1885. This was then considered "way out of town." In 1887 a building was erected by Mr. Gasser on Euclid avenue near Bond and the first up-to-date florist store in Cleveland opened therein, and he also had built the first city delivery wagon of the present type.

Other flower stores having been opened the Gasser store was called upon for any flowers they could possibly spare, and these stores were accommodated and so was started the first attempt at wholesaling flowers in the city. This branch of the business grew rapidly and it became necessary to erect additional greenhouses. In 1901 the firm was incorporated, taking many of the older employes into the corporation, and it was decided to separate the two lines of business, the wholesale store being located at 1035 Prospect street and the retail store on Euclid avenue, just east of Ninth street. Since that date the two stores have been kept strictly separate, the retail store buying what is needed for their trade from the wholesale store, where the product of the greenhouses is shipped, and receiving no preference or favoritism. The only advantage the retail store takes is to place its orders early and have it protected, as any other customer can do, and it frequent-

A NEW ADIANTUM FARLEYENSE.

From the Gardeners' Magazine February 11, 1911.

ly happens that their order comes too late to be filled, as was the case last Christmas when they had to get their flowers where they could at the last moment to fill unanticipated orders.

The quality of the stock which this firm produces has always been of the highest and the service rendered their customers of the best and duly appreciated, and a stock is always carried when possible to meet all spasmodic demands. The flowers reach the store at 6:45 a. m. and the orders are picked out and set aside in strict rotation and shipped. The store is open from 6 a. m. until 6 p. m. and on Sundays from 6:30 until 10:30 in the morning. The firm has always made it a point to fill all orders if possible and if they do not have the stock, to purchase the best obtainable, sometimes at a pecuniary loss, and have thus built up a large, prosperous business, and this year, with increased planting, they hope to give even better satisfaction than they have been able to do heretofore.

Experiments on the Forcing of Plants.

Everyone is aware of the methods of etherization and immersion in warm water by which plants may be caused to pass from their resting stage and to flower precociously. Recent experiments by Dr. Fr. Jesenko* demonstrate that yet another method may be employed for this purpose. The new method, which would not at first sight appear to be so practicable as the older methods, consists in injecting into the stems watery solutions of alcohol or of ether. The process is simple. The injection fluid is contained in a vessel, and is subjected to a pressure of one to three atmospheres. Side tubes connect the vessel with the branches to be forced. Using Ribinic Pseudacacic, Dr. Jesenko was able to show that a five per cent solution of alcohol or a 0.1 per cent ether solution injected into out branches caused the buds thereof to expand 26 days earlier than was the case with the buds of untreated branches. It may be noted that it is not necessary to cut off the branch which is to be forced. By attaching the cut end of a branch which remains attached to the shrub or tree to the injection apparatus, the solution may be forced into the plant and precocity of flowering induced. By the use of a morphia syringe Dr. Jesenko injected single buds with alcohol and ether solutions, and succeeded in causing the parts so treated to expand before the untreated buds. Herein is conveyed a hint which the more enterprising grape growers might avail themselves of, though as to whether the results would be successful we expressly guard ourselves from venturing an opinion. It should be added that another experimenter, Dr. Weber, has also made independent use of the methed of injection, using for the purpose the morphia syringe. Pure water is injected into the buds of lilac, and the plants brought into the forcing house, the injected buds swell and expand long before the untreated buds. —London Gardeners' Chronicle.

PHILADELPHIA, PA.—The display of dahlias at the establishment of Henry F. Michel Co. at 518 Market street, Tuesday, September 26, was one of the finest and best displays ever held.

*Berichte der Seutschen Bot. Gesell., xxix., 5, 1911.

THE GLADIOLUS.

Western Dahlia and Gladiolus Association.

The adjourned meeting of the Western Dahlia and Gladiolus Association (not society), organized at the Sherman House, Chicago, August 5, 1911, will be called to order at the Sherman House Wednesday, November 15, 1911, at 10 o'clock a. m. for the completion of the charter list and regular business of the association. For full particulars see Bulletin No. 1 to be issued October 10, 1911.

E. S. THOMPSON, Sec'y.
H. W. KOERNER,
Vice-President and Chairman.

Gladiolus Niagara.

The summer of 1911 has not been productive of many novelties in the floral world, but Gladiolus Niagara, which we illustrate, was a great favorite with the trade wherever it could be obtained. This variety originated with Frank Banning, Kinsman, O., and resembles the popular America very much in its spike and flower, being, if anything, some larger than that variety but is of a very pleasing soft yellow shading to a cream in the upper petals. The throat is splashed with carmine and the outside petals are sometimes streaked with the same coloring. The stamens are purple and the stigmas pale carmine. The spike is tall, erect and stiff and the flowers are well placed and the foliage is strong and good color. The flowers last well and when cut bloom out nearly to the last flower if well cared for in water. This variety is certainly a great addition to the gladiolus which is becoming a very popular summer flower with all the trade.

Gladiolus Bulbs and Flower Spikes.

It is a question with some growers whether gladiolus bulbs are injured by cutting the flower spikes for market. To test it in a small way we marked off this year about 100 feet of a row of America and on this cut out every spike before any bud showed color, in fact, as soon as the spike appeared. On the remainder of the row, same soil and conditions, we cut all good spikes with liberal stems as they came into bloom.

In digging we found the bulbs that had not been allowed to bloom de-

GLADIOLUS NIAGARA.

cidedly larger than those from which the spikes had been cut and the bulblets very much more numerous.

E. Y. TEAS & SON.

The Future of Orchid Culture.

Few plants have been more roundly abused by those ignorant of their culture, or more highly commended by those conversant with it, than the orchids. The "decline of the orchid" has been prophesied time and again, the "orchid craze" has been burlesqued and caricatured and those who, for the love of these beautiful and distinct flowers, have spent time and money for years and years, have been described as fit inmates for lunatic asylums by writers who have been able by some cajolery or other to get their jeremiads before the horticultural public through the medium of the press. Yet with all this one may well ask the question: "What is the future of orchid growing in America?" and it would be an interesting feature if those who are in a position to do so would give readers the benefit of their opinions on the subject in a paper that has always been so freely open to discussion of live points as THE AMERICAN FLORIST.

For it is a live point, friends. Although the statement may meet with opposition, we are prepared to make it without qualification: "There is no cleaner profit-making proposition available to the cut flower grower with capital today than that of growing orchids." It is true they have to be handled properly and the old-time orchid grower who spends half a day potting a plant and all day watering a house of plants simply is not wanted in a commercial orchid growing establishment. Who with one grain of commercial sense would think of growing roses, chrysanthemums or carnations under the same conditions that obtained thirty years ago? Yet this is just what some large growers of orchids are trying to do. They do not know orchids and have to depend upon foreign growers with ideas picked up in private gardens abroad, which is bad enough, or else place their plants in the hands of men who know nothing but rose or carnation culture, which is infinitely worse. Then because their orchids are not a success, commercially on the one hand or culturally on the other, they raise a howl that can be heard all over the United States.

And with all this abuse of the orchid, importing firms find that they have to push their collectors further and further afield and yearly have more trouble in obtaining their supplies. To some extent this is accounted for by the march of civilization. Railroads are being pushed farther and farther into the forests, clearings are more plentiful and natives are becoming more and more alive to the value of the plants. But this is not all. Take the old Cattleya labiata, the type species of the genus, and the number of good plants that can be procured in its native habitat is becoming smaller annually. Lost for many years, collectors some 20 years ago re-discovered this species, since when millions of plants must have been sent to this country and to Europe, with the consequence that it is now practically extinct as far as large salable plants are concerned, and prices on this popular kind are bound to be higher.

What has happened to this species will eventually happen to C. Trianæ, to C. Mossiæ, to C. Percivaliana—in short, to any and all of the popular and showy kinds. It is folly to prophesy or to try to foretell the future, but there is every indication that old species and good varieties will become increasingly valuable as time goes on and that, as in other plants, artificially raised hybrids and cross-bred plants will have to be depended upon. A long way off, perhaps, someone may say who has had a little experience of raising orchid seedlings. To such we can only say, wait a little and at the same time watch what is being done by British and European growers generally and before long you will realize that, in the language of the slang experts, this is "no dream." In any case ventilation of grievances or opinions is a mighty good thing and if the time contained in this brief note is taken up by those better able to speak on the point than the writer it will not have been written in vain. H. R. R.

The Late A. A. Hixon.

Sweet Pea £1000 Prize Awarded.

As is generally known the proprietors of the Daily Mail offered in the spring of this year £1000 for the best bunch of sweet peas, to consist of 12 spikes, not fewer than four varieties. A second prize of £100, a third of £50, 100 silver medals, and 900 bronze medals were also offered. Such a prize as £1000 for a single bunch of flowers is, it is needless to say, unprecedented in the annals of horticulture—not for its magnitude only, but also for the comparatively simple and easily-grown nature of the exhibit required. The result was that entries approaching 40,000 were received. The competition was decided July 28 and the flowers had all to reach the Crystal Palace by parcel post. This condition, which seemed a hard one to many, placed competitors on a footing approaching equality. The plan adopted as to judgwas as follows. The boxes were delivered by the postal authorities to a marquee erected for the purpose. The boxes were opened by a number of boy scouts, and examined at once by a small committee of judges, who decided if the flowers were fit to go forward. Thousands of the bunches were dried up, or much too small to be considered, whilst many more were not in conformity with requirements. Only 12 spikes were to be sent; some forwarded only three or four; others as many as 100, whilst several sent bunches of one variety only. The result of this preliminary examination was that some 10,000 bunches were brought to the notice of the 10 judges. These gentlemen commenced work at 8 a. m. on Friday, and, working in pairs, selected the best from each table. One hundred and three bunches were in this way picked out and put on a separate table. From this lot the first three were chosen, and the final decision was arrived at by a vote of 6 to 4, the first prize of £1,000 being awarded to Mrs. Fraser, The Manse, Sprouston, Kelso; the second prize of £100 to H. W. Richards, Ryde, Isle of Wight; and the third prize of £50 to Rev. D. D. Fraser, The Manse, Sprouston, Kelso. The flowers which were awarded the first prize were large, and bore evidence of excellent culture. Moreover, they were all four-bloom sprays, the stalks being about 16 inches long. John Ingman, Mrs. Hugh Dickson, Arthur Unwin, King Edward Spencer, and a dark sort, like Nubian or Tom Bolton, were the varieties. Those to which the second prize was awarded had not the same length of stem as the first, and several of the spikes had only three flowers. The judges voting in the majority comprised all the practical growers.—London Gardeners' Chronicle.

OBITUARY.

Adin A. Hixon.

Adin A. Hixon of Worcester, Mass., formerly secretary and librarian of the Worcester County Horticultural Society and one of the best known horticulturists of New England died at his home, 6 Gates lane, September 25, of pernicious anæmia, after an illness of ten months, aged 68 years.

Mr. Hixon was born in Boston, Mass., March 17, 1843, the son of Dwight and Marion (Wentworth) Hixon and at the age of eleven years first obtained employment in a pharmacy. He moved to Worcester in 1865, taking charge of a drug and paint store and three years later entered the business of manufacturing bricks. Becoming interested in horticulture he gave up this business and devoted the remainder of his life to floriculture, establishing himself in business at 6 Gates lane and later taking his son into partnership under the firm name of A. A. Hixon & Son. He became a recognized authority on horticultural subjects and served the horticultural society as secretary and librarian for 20 years, until failing health required his relinguishing the office. He was a member of many societies identified with horticulture and agriculture and also of fraternal and social organizations.

He is survived by a widow, one son, Allyne W. Hixon, and two grandchildren. The funeral was held at his late home with services at Bethany Church, Wednesday, September 27, and the interment was in Hope cemetery.

M. W. R.

HAMPTON FALLS, N. H.—John A. Dow, who during his early days was engaged in the florist business, died September 23 at the age of 71 years.

TROY, N. Y.—Isaac Gillett, who for many years conducted a florist business on Eighth avenue and Fifteenth street, died September 22, aged 68 years.

PATERSON, N. J.—Mamie E. Vescelius, wife of Arthur I. Vescelius, the Broadway florist, died at her home September 21. She is survived by her husband and one son.

SCHIZANTHUSES make fine basket plants.

CORNELL S ALUMNI are said to be protesting against the resignation of Prof. L. H. Bailey. The latter's address on "The Outlook Countryward" before the Massachusetts Horticultural Society early in the year showed a remarkable grasp of the subject and attracted widespread attention.

THERE is something queer about the celebration of the silver anniversaries of florists' clubs. The St. Louis club, it seems, was organized June 28, 1887 and celebrated last summer. The Philadelphia club organized in 1885 and celebrated last Tuesday, while the Chicago anniversary ceremonies are scheduled for October 5 (Thursday of this week), organization having been effected November 3, 1886.

Peonies For Memorial Day.

ED. AMERICAN FLORIST:

Will you kindly furnish me with a list of names of double peonies that can be relied upon to be in bloom for Memorial day? P. F.

New York.

Having peonies in bloom for Memorial day is dependent entirely on the location. Sometimes a difference of a week or ten days in the time of blooming will be noted in the same varieties a mile apart. We have a block of peonies near the greenhouses on a southern slope that were a week ahead of the same variety in the nursery, three-quarters of a mile away where they were exposed and planted on the level ground. We would say that Queen Victoria, Edulis Superba Festiva Maxima, Jeanne d'Arc and Mme. de Verneville could probably be depended upon to come into bloom for Memorial day if exposure and location are favorable. C.

Society of American Florists.

The following letter has been received:

H. B. Dorner,
Secretary S. A. F.

At the last meeting of the New York Florists' Club I was instructed to convey to the Society of American Florists through you the thanks of the club for courtesies and sympathies extended on the occasion of the death of our fellow member, John Birnie, in Baltimore at the time of the recent convention. JOHN YOUNG, Sec'y.

REGISTRATION OF ROSES.

Public notice is hereby given that Jackson & Perkins Company, of Newark, Wayne County, N. Y., offer for registration the roses described below. Any person objecting to the registration or to the use of the proposed names is requested to communicate with the secretary at once. Failing to receive objection to the registration, the same will be made three weeks from this date.

DESCRIPTIONS.

Oriole.—Seedling from Yellow Rambler, crossed with pollen from an unnamed seedling which was itself the result of the crossing of Multiflora with various tea roses. Holds its yellow color better than any other yellow rambler in commerce. Remontant.

Genevieve Clark.—Deep pink when the flowers first open, changing to a clear shell-pink as they grow older; the covered and shaded portions of the petals being almost white. For bedding and forcing in pots.

Sunshine.—Yellow dwarf polyantha; same habit of growth and bloom as Mrs. Cutbush; deep golden yellow in bud, changing to a lemon yellow as the flowers open.

H. B. DORNER, Sec'y.

American Rose Society.

PRIZES FOR NEW ROSES.

Mrs. Frances Roche of Newport, R. I., authorizes the offering of a prize of $50 for a new yellow rose, to be competed for any time after June, 1912. The said new rose to resemble as nearly as possible in color the Marshal Niel, but with a strong upright stem.

Another prize will soon be offered, that is, the Mrs. Gertrude M. Hubbard gold medal, to be awarded once in five years. This medal is to be given to the originator of the best rose of American origin introduced within five years. It will be offered in the year 1914.

An executive committee meeting of the American Rose Society will be held in New York City, September 28, to consider arrangements for the Detroit exhibition. This meeting will be followed by a conference in Detroit to determine upon the detail work. The society will ask its friends to subscribe to a guarantee fund so that it may be able to offer an excellent list of prizes and be assured of financial support. The society has passed the $3,000 permanent investment fund from its life membership fees. This fund is invested in guaranteed mortgages of New York, and securities in which the state savings banks are authorized to invest.

BENJAMIN HAMMOND, Sec'y.

Personal.

Prof. Hugo De Vries, of Amsterdam, Holland, author of an important work on the "Species and Varieties," and other publications along that line, has been honored by Queen Wilhelmina in his appointment as commander in the order of the Netherland lion, on her recent birthday, August 31.

Benjamin Hammond, the well known paint, putty and insecticide manufacturer of Fishkill, N. Y., has just declined the republican nomination for member of assembly in his district owing to pressure of business.

Col. J. D. Carmody of Evansville, Ind., was quite active last week in the lavish entertainments provided for the Posey County homecomers.

Coming Exhibitions.

(Secretaries are requested to supply any omissions from this list and to correct any dates that may have been altered since the last advices.)

Chicago, March 11-17, 1912.—Spring show, Horticultural Society of Chicago, Art Institute. James H. Burdett, secretary, 1620 West 104th place, Chicago.

Cincinnati, O., November 13-18, 1911.—Fall exhibition, Cincinnati Florists' Society, Horticultural Hall-Music Hall. George S. Bartlett, secretary, 131 East Third street, Cincinnati.

Hartford, Conn., November 8-9, 1911.—Chrysanthemum show, Connecticut Horticultural Society, Putnam Phalanx Armory. Geo. W. Smith, secretary, Melrose, Conn.

Lenox, Mass., October 25-26, 1911.—Grand fall exhibition, Lenox Horticultural Society, Town Hall. Geo. H. Instone, secretary, Lenox.

Madison, N. J., October 26-27, 1911.—Sixteenth annual flower show, Morris County Gardeners' and Florists' Society, James' building. Edw. Reagan, Morristown, N. J., secretary.

Milwaukee, Wis., November 13-19, 1911.—Fall Flower Show, Milwaukee Florists' Club, Auditorium. Gustave C. Mueller, secretary, 926 Ninth street, Milwaukee.

New York, November 3-7, 1911.—Fall exhibition, Horticultural Society of New York, American Museum of Natural History, Central Park West and Seventy-seventh street. Geo. V. Nash, secretary, New York Botanical Garden, Bronx Park, New York.

New York, November 1-3, 1911.—Chrysanthemum Show, American Institute of the City of New York, 19-21 West Forty-fourth street. Wm. A. Eagleson, secretary.

New York, November 3-12, 1911.—American Land and Irrigation Exposition, Madison Square Garden. Gilbert McClurg, general manager, Singer building, New York.

St. Louis, Mo., November 7-11, 1911.—Fifth fall floral exhibition and pomological display, St. Louis Horticultural Society, Coliseum, Jefferson and Washington avenues. Otto G. Koenig, secretary, 6473 Florissant avenue, St. Louis.

St. Louis, Mo., November 7-11, 1911.—Annual exhibition Chrysanthemum Society of America, in connection with the St. Louis Horticultural Society.

Stamford, Conn., November 3-4, 1911.—First annual exhibition, Westchester and Fairfield Horticultural Society, Casino. J. B. McArdle, secretary, Merritt building, Greenwich.

Tarrytown, N. Y., October 31-November 2, 1911.—Thirteenth annual exhibition, Tarrytown Horticultural Society, Music hall. E. W. Neubrand, secretary, Tarrytown, N. Y.

Worcester, Mass., November 9, 1911.—Chrysanthemum exhibition, Worcester County Horticultural Society, Horticultural hall, 18 Front street. Leonard C. Midgley, secretary, Worcester, Mass.

Meetings Next Week.

Baltimore, Md., October 9, 8 p. m.—Gardeners' and Florists' Club of Baltimore, Florists' Exchange hall, St. Paul and Franklin streets.
Butte, Mont., October 13.—Montana Florists' Club, Columbia Gardens.
Chicago, October 11.—Gardeners' and Florists' Union No. 10615, 10 and 12 Clark street.
Cincinnati, O., October 9, 8 p. m.—Cincinnati Florists' Society, Jabez Elliott Flower Market.
Cleveland, O., October 9, 7:30 p. m.—Cleveland Florists' Club, Progress hall, 2610 Detroit avenue.
Hartford, Conn., October 13, 8 p. m.—Connecticut Horticultural Society, County building.

HOT COMPETITION

Philadelphia Club Anniversary.

Horticultural Hall was the scene of the most successful social event ever given by the Florists' Club of Philadelphia, when on Tuesday, October 3, was held the banquet to commemorate the twenty-fifth anniversary of the founding of the organization. For this important function the members had been requested to bring the ladies of the family—their wives, daughters and sweethearts—and their presence greatly added to the enjoyment of the occasion.

The guests gathered in the assembly room on the first floor and at 7:15 o'clock proceeded to the main hall above, in which the tables were spread. The stage was decorated with palms, which concealed the orchestra. Around the walls of the large room were placed oak trees, which made an acceptable background for the brilliant coloring of the tables. These were decorated with dahlias, each table of a separate color. The tables, each seating eight persons, were arranged in horseshoe form and pointing toward the main or guests' table, thereby closing the circle. In the center of the open space was a low mound of ferns, crotons and vases of dahlias. These ferns were also used to bank from the floor up the ends of each table that faced the circle and also the front of the speakers' table, making a continuous line and joining the tables in a gorgeous band of color. Over 5,000 selected flowers were used.

A pleasant feature was the seating of the company at the separate tables, parties being arranged among themselves, which relieved the committee in their work of placing the guests.

Hon. Wm. B. Smith officiated as toastmaster and introduced the speakers and others in his usual humorous and happy vein.

W. R. Smith of Washington, D. C., honored as the first to be called on, spoke feelingly of the pleasure it gave him to be present and of his love for the profession and the great power it had for the uplifting of the people. Robert Craig, the first president of the club, had for his theme the opportunity of the young men who would soon guide the policy of the organization and whose work in the future was to determine if the club was to keep to the front as it had in the past. Adolph Farenwald upheld the rose as a commercial flower, saying that it would always be first in the hearts of the people. Wm. F. Gude of Washington paid a great tribute to the ladies, whom he said brought inspiration and progress to mankind. He read the lines of Burns, "He tried his 'prentice hand on man and then he made the lassies." The florists had every reason to think well of the ladies, as much of their business came from or on account of them.

J. Otto Thilow responded to "The Future" by praising the men of the past and present and holding them and their work as examples for the coming generation. The great improvement in the dahlia showed what could and would be done in other lines. He made an excellent address. S. S. Pennock held up the middlemen and their mission in the business, claiming that they were one of the greatest factors in its success. Robert Kift spoke for the press, while David Rust read Albert M. Herr's remarks on his toast, "The Carnation." Richard Vincent, Jr., made an earnest plea for support on his work in the Society of American Florists the coming year. He saw a great future for the society.

There were songs by Arthur Seymour, Mrs. Mary Flack, Horace Dumont and Robert Craig, and recitations by Wm. Wunder. The only draw-back was the poor acoustic properties of the hall, which made it very hard for the speakers to be heard. The party broke up in time to take the last cars and all voted it the finest event ever given by the club.

Following are those who were in attendance:

F. Adelberger, J. E. Andre, Doylestown, Pa., Godfrey Aschmann, John Aschmann, H. Bayersdorfer, Eugene Bernheimer, H. S. Betz, Miss Burton, Alfred Burton and wife, George Burton and wife, Alfred M. Campbell and wife, Geo. E. Campbell, Geo. D. Clark, Louis A. Conche, D. T. Connor, Carl M. Corts, George Craig, Robert Craig and wife, Robert A. Craig and wife, Wm. P. Craig and wife, James Dean, Freeport, L. I., N. Y., John H. Dodds, Daniel C. Donaghue and wife, H. T. Dumont, Howard M. Earl, J. D. Eisele, W. F. Fancourt, Adolph Farenwald and wife, Roslyn, Pa., J. K. M. L. Farquhar, Boston, Mass., Geo. S. Faulkner, H. I. Faust, H. C. Geiger, John C. Gracey and wife, J. F. Graeff and wife, Andrew Graham and wife, Victor Groshens and wife, Roslyn, Pa., Wm. F. Gude, Washington, D. C., John P. Habermehl, Mrs. Wm. K. Harris, Sr., Wm. K. Harris and wife, E. A. Harvey and wife, James Heacock and wife, Joseph Heacock and wife, Mrs. Heinszey, A. M. Herr, Lancaster, Pa., Paul Huebner and wife, Robert Kift and wife, Wm. Kleinheinz and wife, Ogontz, Pa., Richard E. Lange, Mrs. Lank, C. E. Larzelere, Thos. W. Logan and wife, August Lutz, P. McCutcheon and wife, Chas. E. Meehan and wife, Mark P. Mills and wife, F. J. Michell, H. F. Michell, Clarence W. Moore, Stephen Mortensen and wife, Southampton, Pa., James Myers, Arthur Niessen and wife, Leo Niessen and wife, S. S. Pennock and wife, Alphonse Pericat, J. W. Prince, John A. Ruppert, Alfred A. Rust, David Rust and wife, Martin Samtmann, Xavier E. Schmitt, Theo. Shobet, J. F. Sibson and wife, Charles Sim, S. S. Skidelsky, Wm. B. Smith, W. R. Smith, Washington, D. C., J. H. Sperry, E. A. Stroud, Strafford, Pa., J. Otto Thilow, Edward Towill and wife, Roslyn, Pa., Clarence Upton, W. H. Vance, Richard Vincent, Jr., White Marsh, Md., Geo. C. Watson, John Westcott and wife, J. G. Whilldin, E. A. Wohlert, Julius Wolff, Jr., and wife, Wm. Wunder and wife, John Welsh Young. K.

Plants of the Malay Archipelago.

With the exception of the Cape Colony there is, I believe, no other country on earth where so many species of plants grow as in the Malay Archipelago, notwithstanding its greatest part being botanically practically unknown. The luxurious vegetation of this Garden of Eden is really overwhelming. In the wetter parts the growth of plants is of course stronger than in the drier parts, but nowhere is vegetation entirely absent except in the immediate vicinity of the craters of the volcanoes.

Now the wet parts of the country are not suited to the culture of many exotics originating in a dry climate, but such plants may be cultivated in the drier parts of Java, for there are stations with not over 60 rainy days in a year, but in some places there are 250 rainy days, and most of the exotics will not stand this deluge of water. In the dry parts irrigation is practiced and with success in harvest.

We have made experiments with plants from Europe, America and other countries, but in general one can say the trees and shrubs of the colder parts of the temperate region do not succeed, with but few exceptions, many of those belonging to the warmer parts of that region (southern Europe, southern United States, etc.), do well and all perennials or annuals as a rule grow nicely (if protected from rain). We cultivate in pots as much as possible. There are many thousands of plants in these regions that are never offered in the United States and later we propose to write of these in a detailed manner. M. BUYSMAN.

Lawany, Java.

NORTHBORO, MASS.—Ralph E. Wadsworth & Co. will erect a greenhouse 40x200 feet on the property recently purchased on Pleasant street, which will be devoted to sweet peas.

MARINETTE, WIS.—George Vatter has purchased two acres of land adjoining his greenhouses and will erect an addition to his already large area which will be devoted to roses.

NEWARK, N. J.—The German Horticultural Society celebrated its thirty-fifth anniversary September 24 with an exhibition of plants and flowers.

ONCE MORE

The Cut Flowers of Poehlmann Bros. Co.

SWEPT THE DECK

At the State Fair at Springfield, Ill.

9 Firsts—3 Seconds—3 Thirds—15 Prize Winners

The high quality of every one of our exhibits was remarked by all the trade visitors. It proved that the Poehlmann Bros. Co. not only has held the pre-eminent position won at the previous exhibitions, but has this season surpassed itself in the quality of its stock and beaten its own best record. We can supply the exhibition grade of stock to all who order it and shall cut heavily of all lengths of stem for fall.

Send Us Your Orders and You Will Be Handling

Office and Store: 131 N. Wabash Ave., Chicago. Greenhouses: Hinsdale, Illinois

Chicago.

OCTOBER OPENS WELL.

October opened with quite a burst of trade, the wholesale stores being very busy shipping out stock, and the call for some flowers was fully equal to the supply. American Beauty roses were shipped out as fast as they were received and on Monday the market was very nearly cleaned up of this most popular rose, and the prices on all grades were slightly advanced. The other roses are now in bountiful supply and of excellent quality. Killarney is now in beautiful condition, the flowers of excellent color and substance, the stems all that could be desired and the foliage luxuriant, and White Killarney is now also of good color, having lost much of the creamy tint often seen in late summer and early fall. Mrs. Jardine is seen in splendid shape and some especially fine blooms of this as well as Mrs. Marshall Field are to be had. Richmond is in good supply and of excellent quality. Some especially nice Perle des Jardins are also noticed and Mrs. Aaron Ward is used extensively. Carnations are now in fine condition for this time of the year, the color is good and the stems rapidly attaining good length, and the flowers of good substance. Enchantress and White Enchantress are being received in good quantities, and as asters are nearly out of the market, are selling well; the best stock has advanced a little in price. Lilies are in good supply and the stock is fine as is also that of lily of the valley. Orchids are quite plentiful for the season and are featured in the window displays. Gladiolus are still to be had in quantity and some very fine stock is to be seen at some of the stores. Dahlias are plentiful and the light colored ones are being used extensively in all kinds of work. Asters are practically done, there are a few flowers still to be had, but they are of inferior grade and the wholesale stores no longer quote them. Tritomas still are the gaudy flower that makes a great show, and have been used extensively in the department store openings the past week. Chrysanthemums are being received in larger shipments and the blooms are of fine quality, some splendid flowers of Golden Glow and October Frost are offered. Cosmos on long stems is to be had and the pink and white are both used freely in the retail window displays. The green goods market is well supplied and the stock is all that could be desired.

NOTES.

The Briggs Floral Co., a branch of the Briggs House Florist, opened their store on Van Buren street on Saturday, September 30, with Fred Strail, the efficient designer in charge. D. Papatony, the proprietor and his nephew Andrew, will assist Mr. Strail in looking after the brisk trade they expect to enjoy.

E. E. Pieser, who recently returned from a most enjoyable visit in Canada, speaks in glowing terms of Winnipeg, and its surrounding country, and says the ambitious young man of today would do well to locate there for the rapidly growing district offers splendid inducements to bright young men.

The window display of A. Lange on East Madison street was particularly attractive this week, the outside of the window was draped with Southern smilax and the fine assortment of orchids, roses and other seasonable stock was the center of attraction for the transient customer.

The Chicago Flower Growers' Association is receiving a very fine grade of dahlias from E. S. Thompson, Benton Harbor, Mich. The flowers are sold by the box, 65 blooms of a separate color in each, and are eagerly sought by the best trade.

The Boston ferns and other nephrolepis at Muir's on Michigan avenue are in excellent shape with a great assortment of sizes. All hands are busy with the shipment of bulbs which has just arrived.

Dwight L. Harris, general manager of the Pulverized Manure Co., says that his firm's storage plant, with a capacity of 600 tons, located near St. Louis, has just been completed.

W. J. Smyth is displaying some large plants of celosia that are very showy and attractive. Designer McCormick is spending his vacation at his old home in Albany, N. Y.

The many friends of V. Bezdek, of the Northwestern Floral Co., are pleased to hear that he is much improved and hope that he will soon be about.

Adams-Robertson Co. opened their store at Bellevue and Rush streets (close to N. State street) October 1, with a nice display of seasonable stock.

Vaughan & Sperry are offering a very good grade of white and yellow chrysanthemums in addition to a large supply of all other seasonable stock.

E. C. Amling, the well known wholesale and commission merchant, will celebrate his forty-third birthday on Tuesday, October 10.

The Florists' Club bowling league opened its season on October 4, at Bensinger's new alleys, 29 West Randolph street.

The Des Plaines Floral Co. is shipping a splendid grade of Beacon, Washington and Bonfire carnations to this market.

John Kruchten is receiving regular shipments of home grown violets, bouvardias and gardenias.

Oscar Metz has about completed work on his two new greenhouses at 5525 Jefferson avenue.

Homer Metz has accepted a position as traveling salesman with E. H. Hunt.

160 N. Wabash Ave., CHICAGO

Henry Wise, of the J. A. Budlong force, and Miss Eva Pfeifer were married at St. Gregory's church on Wednesday, September 27. A reception was held at the home of the bride's parents after which the happy young couple left on a two weeks' honeymoon.

H. E. Philpott arrived from Winnipeg on September 30, and has devoted his time ever since in making preparations for the banquet on October 5. Mr. Philpott has just moved into his new residence at 42 Balmoral street, Winnipeg, Man.

Joe Einweck, the American Beauty man at Bassett & Washburn's store, was agreeably surprised when a party of friends to the number of 60 gathered at his home on September 30 to celebrate his birthday.

Emil Ehrhard, of Park Ridge, expects to finish his violet planting this week. He is very successful in growing this flower and sells his stock direct to the leading retail stores of this city.

Kennicott Bros. Co. has just completed the building of a large cold storage room, with a capacity of three carloads, in the rear of their store on North Wabash avenue.

A meeting of the board of directors and stockholders of the Chicago Flower Growers' Association will be held on October 20, at 7:30 p. m.

H. C. Blewitt is expecting great things from a fine crop of Enchantress and White Enchantress carnations.

John Ziska, now a full fledged politician, takes great pleasure in visiting his friends on the local market.

W. H. and J. F. Kidwell spent a few days in Michigan last week.

ROSES, our selection, $3.00 per 100

Miss K. N. Cooper, the industrious manager of the Auburndale Goldfish Co., 922 West Randolph street, has at last been enabled to receive her supply of the beautiful creatures of the finny tribe, and as a result is filling a large number of delayed orders. She is offering a very good inducement to one florist in each town, and those interested would do well to communicate with her immediately.

J. A. Budlong is again enjoying their regular fall shipping trade and the way the orders are coming in one would say the dull season is practically over. Phil Schupp says the demand for bouvardias is very good and that he finds no trouble in disposing of these popular flowers. A splendid grade of October Frost chrysanthemums and some good quality sweet peas are features at this store.

The Geo. M. Garland Co. is making extensive improvements and will double the capacity of the already large plant at Des Plaines, Ill. This enterprising firm has made arrangements with the railway companies to have a spur track put in and when this is completed will be able to load right out of the building into the car.

Fall opening week at the large department stores was the cause of much floral work. John Mangel of Wabash avenue and Monroe street, had 35 show pieces with autumnal effect at one of the large stores that were beautifully arranged. Dainty baskets in French effects and colonial bouquets are great leaders at this busy corner.

N. J. Wietor and John Schillo have got the automobile fever and can be seen speeding around the city in the latter's car. Evidently the genial wholesaler has cancelled his order for the airship, for an automobile concern has an order from him for a new 1912 model Haines car. All aboard for Clear Lake!

The proprietors of Klehm's Nurseries, Arlington Heights, received a very complimentary letter from the parties in Buffalo who purchased 15 carloads of elm trees from them, thanking them for the splendid manner in which they filled the order and for the fine specimen trees they received.

The demand for American Beauty roses at Peter Reinberg's has been very large for they are of excellent quality. Tim Matchen says that the Mrs. Marshall Field roses are very popular with the retail stores and are used extensively both in their display and decorative work.

John Canger, of Canger & Gormley, arranged the decoration for the Chicago Women's Athletic Club October 3. Henry Dunn entered the employ of this firm October 3, and is now assisting the proprietor in looking after the splendid trade which this firm enjoys.

August and Adolph Poehlmann are attending the state fair at Springfield this week, where their firm is making extensive exhibits. T. E. Waters, who recently entered this progressive firm's employ, also attended the fair and made a brief visit to St. Louis.

Poehlmann Bros. Co. was awarded seven first prizes for roses at the Illinois State Fair at Springfield this week, inculding first for 50 best American Beauties. Two firsts, three seconds and three thirds were also won in the carnation classes.

Zech & Mann are enjoying a very brisk shipping trade and as a result large quantities of choice stock are shipped out daily. An exceptionally fine grade of lilies and carnations are leaders at this store this week.

J. B. Deamud Co. is showing some very fine Golden Glow chrysanthemums and the dahlias are as fine as any that are seen on the market, with a large number of the lighter shades so popular in all classes of work.

Vice-President-Elect August Poehlmann and his brother Adolph, who with their wifes, are at Springfield attending the state fair this week, will extend their trip to the southern part of the state.

Bassett & Washburn are cutting a very good grade of white and yellow chrysanthemums. The large showy blossoms are sold almost as soon as they reach the store.

C. L. Washburn, president of the Illinois State Florists' Association, attended a meeting of the society's executive committee at Springfield, October 3.

Fred Lautenschlager, with Kroeschell Bros. Co., reports a record-breaking month for September, with the prospects very bright for October.

The S. Wilks Manufacturing Co. is very busy getting out boilers in anticipation of receiving many orders before the cold weather sets in.

Rob. Northam, who so successfully manages the Geo. Reinberg store, filled a large number of orders for American Beauty roses the past week.

The Chicago Carnation Co. was awarded five first and four second prizes on nine carnation entries at Illinois State Fair this week.

Kyle & Foerster are supplying their customers with a good grade of single and double violets and a fancy grade of roses and carnations.

Ralph Grohmann, a son of the well known florist of Saginaw, Mich., is in the city seeking employment with an up-to-date retail store.

H. Van Gelder, of Percy Jones, says trade was very good on October 3, and that it was the biggest day he has had since Memorial day.

Chas. W. McKellar's store is again headquarters for orchids and the Cattleya labiatas that he is offering are unusually fine.

Richard Rolston is now in the employ of Lubliner & Trinz, the enterprising florists at 23 East Randolph street.

A. C. Spencer has accepted a position with Kyle & Foerster and entered upon his duties on October 2.

The next meeting of the Illinois State Florists' Association will be held at Joliet, March 5.

A. L. Randall is back from a several months' visit at his farm in Benton Harbor, Mich.

Vaughan's Seed Store reports giganteum lilies and azaleas due here this week.

Miss Carrie Weissgerber is attending the Illinois State Fair at Springfield.

Chas. Erne is back from a short visit with relatives at Terre Haute, Ind.

Visitors: J. F. Johnson and wife, Fort Smith, Ark.; Miss C. Flick, Fort Wayne, Ind.; —— Warnicke and B. Schroeter, Detroit, Mich.; E. W. and W. J. Smith, Pittsburg, Pa.; W. A. Hollingsworth, Atlanta, Ga.; James Fox, Milwaukee, Wis.; E. S. Thompson, Benton Harbor, Mich.; —— Miller, with W. J. Miller & Sons, Pontiac; Elmer D. Smith, Adrian, Mich.

ORANGE, N. J.—The dahlia show of the New Jersey Floricultural Society has been postponed and will be held in the Lindsay building October 13 from 4 to 10 p. m.

LAKE MINNETONKA, MINN.—Henry T. Clinksberry, the well-known orchid specialist, formerly of Trenton, N. J., is now here in business as a florist, located on Minnetonka Beach.

MONTICELLO, IND.—The Monticello Floral Co. has erected a new office and salesroom with a cut flower basement beneath. A new greenhouse 20x100 feet will be built this fall.

BEAUTIES

A Large Supply in all lengths, especially medium and short. Our Beauties are certainly beauties. The heads are perfect, the color is exceptionally fine, and the foliage of a very pleasing color.

Peter Reinberg,

30 E. Randolph St., CHICAGO.

Illinois State Fair.

The state fair at Springfield, September 29 to October 7, brought out a very cerditable showing of plants, cut flowers and floral decorative work. In the classes provided for roses, Poehlmann Bros. Co., Chicago, took the lion's share of the first premiums and in the carnation classes the Chicago Carnation Co. and Poehlmann Bros. Co. secured the leading honors. The dinner table decorations on Tuesday, in yellow, were very effective and attracted a great deal of attention. Among the trade visitors we noted C. L. Washburn, August Poehlmann and wife, Adolph Poehlmann and wife, T. E. Waters, R. S. Woodyard, J. C. Vaughan, Herman Schiller and A. Miller, Chicago; C. E. Loveridge, Peoria; C. E. Gullett, Lincoln; J. F. Ammann, Edwardsville; Geo. A. Kuhl, Pekin, Geo. Madsen, Alton, Albert T. Hey, Maywood; and Mr. Smith, Danville.

The awards were as follows on the opening days:

PLANTS.

Collection of stove and greenhouse plants effectively arranged to cover 200 square feet of space.—Geo. M. Brinkerhoff, Springfield, first; Schiller, the Florist, Chicago, second; A. C. Canfield, Springfield, third; Geo. A. Kuhl, Pekin, fourth.

Twelve palms, grouped for effect.—Geo. A. Kuhl, first; Geo. M. Brinkerhoff, second; A. C. Canfield, third; Janssen Seed & Floral Co., Springfield, fourth.

Six palms, three varieties, two of each.—Schiller, the Florist, first; G. A. Kuhl, second; Geo. M. Brinkerhoff, third; A. C. Canfield, fourth.

Two palms.—Wirth & Gaupp, Springfield, first; A. C. Canfield, second; Schiller, the Florist, Chicago, third; Geo. M. Brinkerhoff, fourth.

One palm.—Geo. M. Brinkerhoff, first; A. C. Canfield, second; Schiller, the Florist, third; Janssen Seed & Floral Co., fourth.

One Cycas revoluta.—Geo. M. Brinkerhoff, first; Geo. A. Kuhl, second; Janssen Seed & Floral Co., third.

One araucaria, any variety.—Janssen Seed & Floral Co., first; Schiller, the Florist, second; Geo. A. Kuhl, third.

Twelve crotons in variety.—Geo. M. Brinkerhoff, first; Geo. A. Kuhl, second; Janssen Seed & Floral Co., third.

Best ornamental or foliage plant.—A. C. Canfield, first; Schiller, the Florist, second; Janssen Seed & Floral Co., third.

Twelve begonias, flowering, in variety.—Geo. M. Brinkerhoff, first; Wirth & Gaupp, second; Geo. A. Kuhl, third.

Twelve geraniums, in not less than 8-inch pots in variety.—Geo. M. Brinkerhoff, first; Janssen Seed & Floral Co., second.

One specimen geranium, not less than 8-inch pot.—Geo. M. Brinkerhoff, first; Janssen Seed & Floral Co., second.

Twelve ferns, distinct, one of each.—Geo. M. Brinkerhoff, first; Schiller, the Florist, second; Geo. A. Kuhl, third.

Six ferns, distinct, one of each.—Geo. A. Kuhl, first; Geo. M. Brinkerhoff, second.

Four adiantums, distinct.—Geo. M. Brinkerhoff, first; Geo. A. Kuhl, second.

Four Nephrolepis Bostoniensis, not less than 8-inch pot.—A. C. Canfield, first; Geo. M. Brinkerhoff, second; Geo. A. Kuhl, third.

Four Nephrolepis Piersoni or other sports of Boston, not less than 8-inch pot.—Geo. M. Brinkerhoff, first; Geo. A. Kuhl, second.

Four Nephrolepis Whitmani, not less than 8-inch pot.—Geo. A. Kuhl, first; Geo. M. Brinkerhoff, second.

Four Nephrolepis Scotti, not less than 8-inch pot.—A. C. Canfield, first; Geo. A. Kuhl, second; Geo. M. Brinkerhoff, third.

One Nephrolepis Bostoniensis, not less than 10-inch pot.—A. C. Canfield, first; Geo. A. Kuhl, second; Geo. M. Brinkerhoff, third.

One Nephrolepis Piersoni or other sports of Boston, not less than 10-inch pot.—Geo. M. Brinkerhoff, first; A. C. Canfield, second; Geo. A. Kuhl, third.

One Nephrolepis Whitmani, not less than 10-inch pot.—Geo. A. Kuhl, first; Geo. M. Brinkerhoff, second.

One Nephrolepis Scotti, not less than 10-inch pot.—Geo. M. Brinkerhoff, first; A. C. Canfield, second; Geo. A. Kuhl, third.

ROCHESTER, N. Y.—The exhibition committee of the Rochester Florists' Association have decided not to hold a flower show this fall.

SOUTH HAVEN, MICH.—W. A. Hartman has retired from the florist business and has moved to Gold Centre, Nev., where he is interested in an irrigation project.

St. Louis.

The first part of the week was very warm and sultry and the latter part of the week it rained and was slightly cooler, but business has been fairly good. Flowers are very abundant and a good frost is necessary for the market to assume its normal condition. American Beauty roses have been very plentiful and have sold cheap, and owing to the warm weather the buds open up quickly. Carnations, especially the poorer grades, have been plentiful and sell at low prices. This week is carnival week, with the Veiled Prophet's ball and several other attractions.

NOTES.

Ostertag Bros. have issued an illustrated souvenir of their silver anniversary, the boys having been in business for twenty-five years. By strict attention to business they have built up a good trade and the firm of Ostertag Bros. is well known and well thought of by the very best people in the city.

The union formed by the employes of the Mullanphy Florist have elected as temporary officers, Julius E. Schaeffer, president; W. Seeger, secretary and treasurer. Whether the florists in general will favor this move is a question which is open to much argument.

Quite a large delegation leaves here to attend the Chicago Florists' Club's twenty-fifth anniversary. Wm. H. Smith, of the Wm. C. Smith Wholesale Floral Co., has charge of the transportation arrangements.

C. Young & Sons Co. will arrange the decorations at the Coliseum for the Veiled Prophets' Ball. Decorative plants and American Beauty roses will be the great features.

George H. Angermueller has been receiving a fine assortment of all varieties of flowers. He has a nice lot of supplies and novelties with which to open the season.

The Wm. C. Smith Wholesale Floral Co. is now supplied with a full line of supplies. The store room is large and very convenient for the increasing trade.

Bassett & Washburn, Chicago, are cutting some extra fancy white carnations which they are shipping to this city; also some early chrysanthemums.

Harry Young has a very pretty store in what promises to be a good location in a fashionable and growing neighborhood.

F. H. Weber is now all ready for fall business. His store room has been painted and refurnished.

A. Jablonsky of Olivette is cutting some nice carnations. W. F.

Providence, R. I.

The Providence Wholesale Flower Market, Inc., a new corporation, constituted to engage in the wholesale and retail flower business, was granted a state charter September 27. The incorporators are Alexander Macrae, John A. Macrae and Joseph Kopelman, all of Providence, R. I. The capital stock of the concern is $5,000, the par value of the shares being $25.

The market will be located on Washington street in the heart of the city, and will probably be open for business October 2. The movement to organize the flower market was made by a number of prominent florists in and about Providence about a month ago, and since that time they have been working diligently to insure the success of their project. The officers are: John A. Macrae, president; Walter Macrae, vice-president; E. E. King, Attleboro, Mass., secretary.

F. K. GREENE.

NEW BEDFORD, MASS.—Edward G. Davis has petitioned for permission to erect an addition, 15x44 feet, to his greenhouse on Shawmut avenue.

Cincinnati.

BUSINESS SATISFACTORY.

Business continues very satisfactory. The amount of stock offered is large and easily fills a demand not small by any means. Most of the blooms arriving are first class, but now and then some consignments arrive that show holding until the last minute. These, of course, move at sacrifice prices and mostly to the street fakirs. Roses are again the leaders in the market. The supply, however, is so large that the prices are only fair. American Beauties, Mrs. Tafts, and My Marylands are most excellent. The others, including Killarneys, Brides, Bridesmaids and Ivorys are a close second. The offerings of carnations are now large, especially in the white and lighter shades and they meet with a very good call. Lilies are good property. The late crop of cosmos is just beginning to come into the wholesale houses. Lily of the valley is on the short side. Chrysanthemums are coming in stronger and sell readily. In decorative greens the Asparagus plumosus arriving from the south is, as a whole, very good. The sprays are long and firm. The supply of all green goods is easily adequate.

NOTES.

The flower show committee at a recent meeting at E. G. Gillett's arranged all the details so that they are ready to take care of all exhibits. Through the co-operation of the local convention association and the various railroads they are assured of an attendance that will easily insure returns sufficient to make that affair a financial success. Literature in the shape of announcement cards, dodgers, show cards and posters are now off of the press and are being distributed as quickly as possible.

The bowling club held a business meeting at the Cincinnati Art Flower Exchange Monday evening, October 1. Chas. H. Hoffmeister was re-elected secretary-treasurer and manager of the club. It was decided to hold the bi-monthly meetings at Wielert's on the first and third Mondays of each month during the ensuing year. The next meet will be at that place October 16. The club also formulated rules for the ensuing year.

W. A. Hollingsworth of Atlanta, Ga., hesitated in our midst last week on his way to Chicago.

E. G. Gillett and E. A. Forter journeyed to New Castle, Ind., the early part of this week.

We regret to report the death of T. J. Murphy, father of J. Chas. and Louis Murphy.

VARIABLE WEATHER.

This week was somewhat lifeless up to Saturday, when trade took a spurt. We have had all kinds of weather crowded into one week, with a violent thunder storm thrown in to remind us of summer; this was accompanied with the heaviest rain on record. We have had big things around Boston this year. White chrysanthemums have appeared, Smith's Advance being the first. This is a grand white and is selling well. Golden Glow is having a run again. Prices all advanced a notch. Roses are not as plentiful, many growers being off crop; the demand is good. Lily of the valley is selling very well and the quality of all grades is excellent.

NOTES.

David Smith, of Thos. Smith & Sons, of Stranraer, Scotland, is visiting the city. Mr. Smith has been crossing yearly for the past quarter of a century and each year has seen a steady increase in his business. Manetti for grafting, he states, will be scarce this year, the price has advanced and even at that it is a problem confronting many of the growers on the other side how they can fill the orders, the dry season having caused a great scarcity. This is the first year he could not guarantee delivery; there seems to be hard times in store for the grower who has to graft.

Some fine carnations (outside grown) for which the grower, John Foote, deserves credit, were seen. They beat the indoor ones, being better in both stem and substance of flower. Herbert Capers is the salesman.

Peter Dewar, of the R. & J. Farquhar & Co., arrived home Friday, September 29, on the Cymric. He had been abroad on a business trip for his firm, accompanied by Mrs. Dewar and son. Peter says that America is the best place on earth.

Wm. Kiss, Manchester, N. H., was burned to death in a Boston hotel Friday, September 29. It is supposed he was smoking in bed and the bed clothes caught fire after he had fallen asleep.

Joseph Tailby & Son of Wellesley and Pierce Bros. of Waltham are sending in Smith's Advance chrysanthemums. Mr. Tailby is delighted with it.

The best colored Killarneys seen in the market are being sent in by William McAlpine of Exeter, N. H.

James Wheeler of Natick and Arthur Capers of Wellesley are marketing some good carnations.

There is a touch of autumn in the air. Weather cool.

Cut Flowers and Florists' Supplies.

COLUMBUS, O.—The State Board of Agriculture have decided to erect a greenhouse on the state fair grounds and have called for preliminary plans. The building will probably be erected within the next few months.

CATTLEYAS, $6.00 per doz.; $40.00 per 100

Cattleyas are more plentiful, and our supply consists of very choice flowers. You will find our price much below what you must pay elsewhere for the same grade. We can furnish pink, white and yellow orchids.

We Are Now Located in our New Building, N. W. Cor. 12th and Race Streets.

Philadelphia.

TRADE REPORTED DULL.

Not much of an encouraging nature can be said of the business of the past week; with most of the trade it was reported very dull, towards the last of the week it picked up a bit, but there were considerably more flowers than there was trade for them, and prices ruled low. On the whole the commission men say they find things about as they were at this time last season and are satisfied with the outlook. All flowers are improving although the warm spell of last week made the stock soft and it did not keep well. Prices remain about the same.

NOTES.

Dahlias are still leaders in the market and large quantities are handled daily, many effective window decorations being made with them. Pennock Bros., who have commenced their artistic displays, have used them quite lavishly. A window of a fine scarlet was very striking and another of the orange and red Minnie McCullough attracted much attention. These were arranged in handle baskets, large and small, many of them hanging from the top of the window, filling up the entire space.

The Leo Niessen Co. are gradually getting settled in their new store, which when all its facilities are in use should give them a great advantage as leaders in their line. Everything has been done here on a large scale, looking to a great business at the present as well as providing for expansion in the future.

The wholesale trade generally are much pleased with the business outlook. H. Bayersdorfer & Co. say they have never been so busy at this season before and reports from some eight salesmen on the road in different parts of the country are very optimistic.

Miss Alice Burton, eldest daughter of John Burton, was married to J. H. Finley on September 30, in Grace Episcopal Church, Mount Airy, which was beautifully decorated for the occasion. After the ceremony a large reception was held at Wyndmoor.

Godfrey Aschman is shipping more araucarias than ever. He has better office facilities, having increased his room both here and in the packing shed. He has large importations of azaleas due to arrive soon.

M. Rice & Co. say the days are not long enough for them, they are so pushed with orders. Their new pliable cycas leaves are selling very well; they are a great novelty.

The London Flower Shop will open its new store at Eighteenth and Chestnut streets about October 15, when extensive alterations will have been completed.

H. H. Battles and the Century Shop make lavish displays in their windows. The floral picture at 108 South Twelfth street is always a work of art and a most attractive feature.

The Robert Craig Co. are very busy with shipping at this time and reserve orders for the holidays on their choice stock are coming in every day.

The Kugler Flower Shop opened Monday, October 2, and presents in its window a choice selection, orchids being the central flower.

Ed. Reid has returned from a very successful southern trip as far south as Florida.

Jos. Heacock says that palm orders are very heavy. K.

Albany, N. Y.

Announcement is made by the department of horticulture, New York State College of Agriculture, Cornell University, Ithaca, of a special course in floriculture, offered for the first time. The course is for the instruction of professionals and amateurs growing flowers under glass. The curriculum will consist of lectures, reading, investigation, and practical work in the greenhouse. Instruction will be begun on December 1, and will be continued until March 1, 1912. Prof. Charles A. Tuck who has charge of the new course, said that New York State has for some years led in the growth and sale of plants and flowers and that the demand for the course had grown to such a degree that it was deemed advisable to add it this fall. WEATHER AFFECTS PRICES.

Conditions were peculiar during the past week—in the early part flowers of all kinds were very plentiful and the prices realized were low, but during the latter part when the weather became colder everything shortened up and prices averaged much better. Outside flowers are now out of the market with the exception of dahlias and hydrangeas. Some of the finer varieties of dahlias such as Souv. Gustav Douzon, are selling well. Chrysanthemums are coming in larger quantities, the following varieties being seen: Marquis de Montmort, Golden Glow, Monrovia, Smith's Advance, Smith's Early pink, Unaka, the new bronze W. Meredith, and Yellow October Frost. Carnations are of all grades and prices are about normal for this season of the year. In roses American Beauties are selling better and Killarneys, Bridesmaids and Brides sell at fairly good prices. Violets are very plentiful. Orchids are short in supply and in good demand. Greens are selling low on account of the large amount of oak foliage that is used at this season of the year.

THE JOHN BIRNIE RESOLUTIONS.

The following resolutions were prepared by the New York Florists' Club on the death of John Birnie:

Whereas, We, the members of the New York Florists' Club, are overwhelmed with sorrow by the loss of our fellow member, John Birnie, whom God called to eternal rest on August 15, 1911, while in the midst of the activities of the annual convention of the Society of American Florists in the city of Baltimore, Maryland,

We deplore the passing of this rugged figure who for eighteen years has been an honored member of this organization and one of its most earnest supporters.

Mr. Birnie's interest in the welfare of the New York Florists' Club was ardent and disinterested, for he steadfastly refused the highest honors in the gift of the club.

He was beloved by the many friends who knew his many admirable qualities of mind and heart, a hater of all forms of pretense, absolutely honest in thought and deed, and to those who had his confidence, he gave a friendship of unreserved loyalty.

His success in business was founded on a thorough knowledge of his calling, an ability to accomplish results, and a probity of character that commended the respect of his fellows;

Therefore, be it Resolved, That we, the members of the New York Florists' Club, with a keen sense of the loss we have sustained, desire to tender our sincere sympathy with Mrs. Birnie and family in this, the hour of their bereavement, and ask that a copy of these resolutions be submitted to them and a copy spread upon the minutes of the club.

CHARLES H. TOTTY,
HARRY A. BUNYARD,
WALTER F. SHERIDAN.

NOTES.

National Flower Show is probably the most interesting topic at present. The new Grand Central Palace at Lexington avenue and Forty-sixth street is an ideal hall for such an exhibition, and the New York Florists' Club is to be commended for inviting the National Flower Show committee to hold its next exhibition in New York in 1913. There is no doubt that better terms can be made by arranging for a date at the present time, and if the local society should decide to hold annual shows they could have a specified time or date allotted to them, as the case is now with the automobile and other exhibitions, and we firmly believe the time is ripe for New York to have a successful flower show. The management of the new Grand Central Palace are anxious to make the flower show an annual event.

The Manhattan Plant and Flower Market are well pleased with the way growers and wholesalers are taking space on their floor in the Coogan Building, 55 West Twenty-sixth street. The officers of this company are A. Hanig, president, and H. Nelson, secretary and treasurer. Mr. Hanig is also proprietor of the Brooklyn Wholesale Cut Flower Market.

C. W. Scott and Bert Chadwick announce that the Bowling Club has now been properly organized on different lines than formerly. Alleys have been engaged at Thum's, Broadway and Thirty-first street, and meetings will be held regularly on Friday evenings and on the Monday afternoon of the club meeting.

The executive committee of the Rose Society held a meeting at Traendly & Schenck's in the interest of their coming exhibition, the following being present: A. Farenwald, Benj. Hammond, Robert Simpson and Wallace R. Pierson.

The next meeting of the New York Florists' Club will be held Monday evening, October 9, and there is promise of a fine show of chrysanthemums of the earlier varieties. It is also expected that Patrick O'Mara will be present and give a talk on his recent trip abroad.

Benj. Hammond is receiving considerable publicity in the Fishkill papers on account of his declining the Republican nomination for member of the assembly—his reasons are that business would prevent him giving the time even if elected.

The sudden death of I. L. Powell of Millbrook, N. Y., is the cause of great sorrow. He was a loyal member of the Florists' Club and a regular attendant at all of the conventions of the Society of American Florists.

Charles H. Totty is sending in Smith's Advance, Monrovia, Unaka, W. Meredith and Yellow October Frost chrysanthemums that command high prices.

Wm. F. Kasting, one of the park commissioners of Buffalo, accompanied by City Forester Filer, were recent visitors on business connected with the park system.

John K. M. L. Farquhar, the well-known Boston seedsman, will address the Florists' Club on "The Horticultural Outlook" at its next meeting, October 9.

BARABOO, WIS.—The Sauk County fair was held the past week. Wm. Toole & Sons, Estate of Wm. Peck and E. T. Ross made good displays, the latter offering plant prizes in the school garden displays. The Toole pansies were extra fine. Seed corn and apples were features of agricultural hall.

STOCK NOT AS PLENTIFUL.

Business the last week in September showed a steady gain, the cool weather greatly stimulating it and stock was not quite as abundant. Dahlias are not as plentiful as in former years, and the quality does not seem as good. Good asters are nearly done, those that are received being good only for funeral work. A nice lot of Easter lilies is on the market, and some very fine lily of the valley comes in daily. Golden Glow chrysanthemums are beginning to be a regular part of each shipment, and the blooms are good. Carnations are arriving in quantities and are selling at very low prices in large lots. A few pink and white Japanese lilies are still coming in. Taking it all together, the variety of stock is not nearly as large as it was a few weeks previous. Roses in all varieties continue fine and greens of all kinds are abundant.

NOTES.

C. B. Knuth is moving his greenhouses to the new location on Euclid road, the place where he was located on St. Clair street is being laid out in lots by a real estate company.

F. Witthuhn and wife are spending a few weeks in Wisconsin on a pleasure trip. Carl and his brother have charge of the store and greenhouses.

A. M. Albrecht is the latest addition to the "Automobile squad" he having bought an Overland delivery car to help take care of his increasing business. C. F. B.

Pittsburg.

FALL SEASON OPENS.

Fall conditions are with us in earnest—cold weather, chrysanthemums and violets. The early chrysanthemums are eagerly sought, especially the white. Lilies were also in strong demand during the week. Violets are good for the start and sell well. Asters are a thing of the past, and dahlias about done. White carnations clean out daily, but colored stock drags a little.

NOTES.

The Zieger Co. has secured the decoration of the Joseph Horne fall opening. A thousand tritomas are included among the flowers.

Randolph & McClements have been having some jobs recently that call for lilies in quantities.

The red dahlia window decoration of Mrs. E. A. Williams stopped most every passerby. Only one variety was used, the bright Lyndhurst, and between the color and the arrangement attention was forcibly attracted.

M. F. Stafford of the Randolph & McClements Co. Penn avenue store has been making effective use of dahlias for window displays.

G. P. Weaklin Co. handled an order for 500 American Beauties during the last week.

Harry Hamm is back from the mountains. Too much rain, he said, but we think a few wedding decorations had something to do with it.

The McCallum Co. state that they are well pleased with the amount of business done at the Cleveland store. Jack Martin went to Cleveland to assist at the opening, and will spend several days there.

Jake Gerwig has taken a position at the Pittsburg Cut Flower Co.

Richmond roses of fine quality are being cut by the South View Floral Co.

F. H. Westhoff, DeHaven, expects to dig his coal on land adjoining his property, having discovered a two-foot vein there.

Gilbert Ludwig has decided to take a place in the store this winter instead of going to school.

Wm. Turner has put a new front in his store which has an attractiveness surpassed by few.

SAN DIEGO, CALIF.—The city has established a flower farm operated by the city park commission, to propagate and grow the plants, vines, ferns and trees required for the exposition to be held in 1915. The flower farm has proved such a success that the city forester is now planting 350 acres to hay and grain, the product of which will feed the stock owned by the city.

The Seed Trade.

American Seed Trade Association.

Leonard H. Vaughan, Chicago, President; Marshall H. Duryea, New York, First Vice-President; Edgar Gregory, Marblehead, Mass., Second Vice President; C. E. Kendel, Cleveland, O., Secretary and Treasurer.

Nex annual convention, June, 1912.

IT is costing the pea growers a lot of money to hand-pick their stock.

RECENT rains have caused considerable injury to Michigan and Wisconsin beans.

GEORGE C. WATSON, the Philadelphia grass seed specialist, will celebrate another birthday anniversary October 6.

DELAYED frosts do not help the retail demand for bulbs, but many amateurs realize that planting time is here and are buying. There should be good October trade.

PRESIDENT L. H. VAUGHAN, of the American Seed Trade Association, returned to Chicago from the east October 1 and reports all seedsmen bewailing the bad seed crop outlook.

THOS. W. CHISHOLM, formerly with Peter Henderson & Co., New York, and more recently with the Germain Seed & Plant Co., Los Angeles, Calif., is now connected with the Braslan Seed Growers Co., San Jose, Calif.

PHILADELPHIA, PA.—S. S. Skidelsky & Co. have succeeded the Skidelsky & Irwin Co. R. J. Irwin, formerly identified with the latter firm, expects to start in business on his own account in New York this month.

ALFRED EMERICH, representing Vilmorin-Andrieux & Co., Paris, France, recently arrived in New York and is visiting the seed trade. He can be communicated with by addressing care of H. Frank Darrow, Box 1250, New York.

CHICAGO.—Prices on the Board of Trade, October 4, for grass seed were noted as follows: Timothy, $13 to $15 per 100 pounds.—Seed corn is in danger from continued rains.—Potatoes lately dug are rotting and some shippers have stopped buying because of moisture in the ground and crop.—J. C. Vaughan is at Springfield, attending the state fair this week.—Onions sets in the field have been damaged to some extent by recent weather conditions.

Benary's Novelties.

The list of novelties for 1912 offered by Ernst Benary, Erfurt, Germany, include many that give promise of great merit, among which are noted the following:

Large flowering winter stock White Lady. This is a pure white stock in every respect equal to its parent Empress Elizabeth, recognized as one of the best and most beautiful stocks. The plants throw up a large central spike and branch freely, finally assuming the shape of a pyramidal bouquet. It will produce 60 to 65 per cent double flowers and surpasses in beauty any other white stock.

Nice early large-flowering winter stock Giant Deep Lilac, which produces huge spikes of large blooms of an admirable new color, and Bianca, large, pure white flowers, very early. The plant produces 15 to 20 lateral shoots, 18 to 20 inches in length, all blooming at the same time.

Double giant zinnias, in new colors, sulphur yellow, flesh color, crimson, violet and purple. The flowers are large and very double measuring from four and a half to six inches in diameter.

Antirrhinum majus grandiflorum. Venus—a delicate pink snapdragon, bearing large flowers of the finest form, thickly studded on long stalks of a lovely pink on white ground, with pure white throat, and will become a most valued sort.

Victoria begonias. The beautiful feature of these tuberous-rooted begonias is that without being double they present a two or three fold layer of petals, with curled and wavy edges, the flowers attaining a diameter of four inches. The prevailing colors are various tints of brilliant scarlet.

Begonia gracilis Mignon is a dwarf, compact growing variety of Begonia gracilis seven to eight inches in height and eight to ten inches across, profusely covered with bloom of fiery scarlet, heightened by yellow anthers.

Perpetual carnation Tolstoi, flowers of light scarlet and exceptionally floriferous.

Princess pansies, a new departure in that the plants are of strikingly erect habit, the stalks being unusually firm and strong. The blooms are freely produced and are blotched and frilled and of a very extensive range of color.

Primula Chinensis fimbriata Sedina, very early and with great profusion of bloom, of a brilliant carmine rose.

Pyrethrum comet-flowered, a selection of extremely free-flowering perennial pyrethrums, with flowers two or three inches across, single or semi-double, the petals being rolled, twisted or sometimes tangled together, ranging in color from pure white through flesh-colored and rose to brilliant carmine and blood-red.

Seed Testing Laboratory for the Trade.

The need of a central seed testing laboratory for the trade has become more apparent every year, especially in view of the fact that so many states have passed seed laws and because of the general demand for better seed.

At the last annual convention of the American Seed Trade Association, the desire on the part of many members was manifest for a laboratory for the trade where tests of seed could be obtained quickly enough to be of commercial value to the seedsmen.

Because of the increased demand for seed testing, both the government and state laboratories in many cases are unable to furnish reports in time to be of value in trading, one state laboratory in the east at this time being about six weeks behind with its work. Many seedsmen who have used the seed laboratory at Washington find it unsatisfactory from a commercial standpoint, because the use of the reports for advertising purposes is prohibited, also because the number of tests allowed any seedsman in any one month is limited to five.

Following the suggestion of President Leonard H. Vaughan, of the American Seed Trade Association that a centrally located and impartial bureau, where careful work of a Zurich standard should be done, would be a great boon to the seed trade, the Seed Trade Reporting Bureau has organized a laboratory for this purpose.

The Seed Trade Reporting Bureau laboratory is prepared to meet the demand for tests, and it is the purpose to give uniform and accurate results at a minimum expense; quick returns by wire, if desired; and impartial treatment, all of which will be confidential.

The equipment of this laboratory is identical with that used in the United States seed laboratory at Washington and approved by the Association of Oncial Seed Analysts.

James E. Benedict, Jr., who has had three years' experience in the United States government seed laboratory at Washington and afterward established and was in charge of the Virginia state laboratory at Richmond, has been engaged as seed analyst for this new laboratory.

Market Gardeners

Vegetable Growers' Association of America.

H. F. Hall, Boston, Mass., President; C. West, Irondequoit, N. Y., Vice-President; S. W. Severance, 508 Walker Building, Louisville, Ky., Secretary; M. L. Ruetenik, Cleveland, O., Treasurer.

ATTENTION is being called to the value of wild muck lands in Michigan and Wisconsin. Such land in northern Indiana onion districts is now worth $80 per acre.

IRONDEQUOIT, N. Y.—Adelbert Titus, the well known market gardener, is building seven new houses, 14 feet, 9 inches, by 300 feet, the material being supplied by the Foley Mfg. Co., Chicago. This is the same type of house as the range 750 long built by the Foley concern for Searles Bros., Toledo, O.

Notes on Seed Growing.

Probably the most important subject to the market grower is the seed supply. The most expert growers realize this and price is almost no consideration to them. It should not be; in fact, our seeds today are much too cheap—they might be higher to the benefit of all concerned if they were better. We have in mind particularly a crop of cabbage we raised this season, of the Glory of Enkhuizen kind, which sold at the rate of $600 per acre, where not a head failed to come up to the mark and the quality was so fine that people who rarely use cabbage could not be over supplied. Now such seed would be cheap at four times its present price. If we could depend on such seeds there would be no use even thinking of growing some seeds ourselves, but when we buy we take a long chance of mistake or error, of misrepresentation, or of unsuitableness. This latter is a serious point. We know not whether the seed we buy is raised in Australia, California, France or Denmark, and adaptation is a big factor. Therefore when we have a crop on hand which answers our purpose, the desire to save seed is almost irresistible. And the moment we save seed we commence to study and become closer observers than we ever were before. We find after some examination that what is supposed to be some standard variety is composed of individuals of which no two are alike.

This gives us an opportunity for selection. If we act wisely we will improve, otherwise deteriorate, our stock. The great factor to know is the nature of our subject, whether it is a self-pollinating plant or otherwise. Thus, tomatoes, peas and beans, for example, generally are self-pollinating, that is, each blossom is perfect and the seeds are generally fertilized before the bloom is opened for insects to interfere, or winds to bring outside pollen. Such subjects are comparatively easily handled, as selection of desired types will bring desired results. On the other hand, melons, cucumbers, cabbage and corn are examples where outside pollen or fertilization is a big factor. Thus the seed produced may not at all reproduce our desired type, having been cross-fertilized with undesirable subjects. With such the safest course is to use the individual row system, which means to save the seed of each plant separately and try a small lot of each the following season, saving the remainder of the original seed, carefully labeled to correspond to our test. That way we can find out the poorest breeders and discard their seed and use only the good ones in the original lot, or we can prevent cross-pollination by protecting the desired blossoms and fertilize them by hand.

The results of the single row tests are remarkable. We have for a number of years worked hard on a strain of tip top melons. We originally saved the seed of a dozen of the finest looking and best flavored melons and planted enough of each to plant one row in our field—that is, each melon represented one row. We soon were attracted to the fourth row, owing to vigor and productiveness, and finally the quality proved all that could be desired. That one melon is the foundation of our present stock, which sold this year on a glutted market for twice the market price. So much for our pains.

The last three years we have grown hybrid sweet corn only; we produce the seed by detasseling one kind as soon as tassels show and save the ears of this kind, selling the other in the market. Thus we have been able to combine earliness and quality, or productiveness and size, or drought resistance and quality much better than we can find in any standard variety.

When we see a fine field of Norfolk Savoy spinach produced by sowing seed bought at 10 cents per pound the question comes up, what is the use of saving seed? Certainly none. But when a cold wave destroys the whole field in a night except one plant we naturally exclaim, "If all had been like this one we could have made a bunch of money." The same is true in a hundred cases. A field of Big Boston head lettuce may tip burn badly making it unsalable—yet if we search we will find one or, maybe, six plants perfect and sound. Why not all? The fact is, we are compelled to plant seeds not adapted to our locality, hence the necessity for home saving and breeding.

MARKETMAN.

LYNN, MASS.—The thirty-seventh annual exhibition of the Houghton Horticultural Society was held in Odd Fellows hall, September 19-20. Special premiums were awarded for school garden exhibits.

ROCKVILLE, CT.—The tarnished plant bug is reported ruining many of the dahlias in this vicinity. The state entomologist advises as a remedy spraying with kerosene emulsion or some contact insecticide.

Success In Market Gardening

REVISED AND ENLARGED EDITION.

A new and larger edition of this well known work on market gardening. It contains everything a market gardener wants to know, and in a form easily understood. It is an invaluable guide to any one in the business from the beginner to the most experienced.

PRICE $1.10

AMERICAN FLORIST CO.,
440 S. Dearborn St., Chicago.

CABBAGE
OCTOBER and NOVEMBER

Early Jersey Wakefield and Charlston Wakefield at $1.00 per 1000; in lots of 5000, 90c per 1000; lots of 50,000, special prices.

LETTUCE

Five best varieties—Grand Rapids, Big Boston, Hanson, Tennis Ball and Black-seeded Simpson $1.00 per 1000, 5000 lots, 90c per 1000; 50,000 lots, special prices.

100,000 Tomato Plants

In 2½-inch pots, in the five best varieties: Comet, Sutton's, A1, Sutton's Winter Beauty, Sutton's Abundance. We are now booking orders for the above plants at $20.00 per 1000. Special prices on larger quantities.

Our plants are grown from best seed obtainable. We are large truckers ourselves, cultivating 200 acres in variouscrops all the year.

Fox-Hall Farm, R. F. D. No. 2 **Norfolk, Va.**

TO THE TRADE

HENRY METTE, Quedlinburg, Germany.

GROWER and EXPORTER on the VERY LARGEST SCALE of all CHOICE VEGETABLE, FLOWER and FARM SEEDS. (Established 1787.)

Specialties: Beans, Beets, Cabbages, Carrots, Kohl Rabi Leek, Lettuces, Onions, Peas, Radishes, Spinach, Turnips, Swedes, Asters, Balsams, Begonias, Carnations, Cinerarias, Gloxinias, Larkspur, Nasturtiums, Pansies, Petunias, Phloxes, Primulas, Scabious, Stocks, Verbenas, Zinnias, etc. Catalogue free on application.

HENRY METTE'S TRIUMPH OF THE GIANT PANSIES (mixed), the most perfect and most beautiful in the world, $5.00 per oz., or $1.50 per ¼ oz., 75c per 1-16 oz., postage paid. Cash with order.

All seeds offered are grown under my personal supervision on my own vast grounds, and are warranted true to name, of strongest growth, finest stocks and best quality.

I ALSO GROW LARGELY SEEDS ON CONTRACT.

The Nursery Trade

American Association of Nurserymen

J. H. Dayton, Painesville, O., President; W. H. Wyman, North Abington, Mass., Vice-President; John Hall, Rochester, N.Y., Sec'y.

Thirty-seventh annual convention to be held at Boston, Mass., 1912.

THE fourth National Apple Show will be held in Spokane, Wash., November 23-30, 1911.

THE Florists' and Nurserymen's Association of Montana held its annual meeting at Helena, Mont., September 26, 1911.

NASHUA, N. H.—The Main street station was awarded the first prize for the best flower gardens of the Boston & Maine railroad.

BUFFALO, N. Y.—Park Commissioners Kasting and Mosier have awarded the contract for building the new greenhouse in Delaware park to Lord & Burnham Co. of New York, whose bid was $18,063.

IT IS reported that California growers are planting canning fruits, such as cling peaches and Bartlett pears, and passing up the shipping fruits entirely, which is no doubt due to the low price shipping fruit brought in the eastern market this year.

WACO, TEXAS.—The eleventh annual convention of the Texas Nurserymen's Association was held September 13. The annual reports showed the association to be in a very healthy condition from both financial and numerical standpoints.

THE Agricultural Experiment Station of South Dakota has issued Bulletin No. 130 describing the new fruits which have been originated at the Station by hybridizing the native sand cherry with stone fruits from Europe and Asia. The new fruits have been distributed in a preliminary way that their comparative value may be definitely established.

Cornus Paucinervis.

This promises to be a useful shrub, and its dense evergreen habit and splendidly hardy constitution suggest its suitability for hedges, says the Gardeners' Magazine, when it becomes plentiful. The narrowly lanceolate leaves are about an inch and a half long, and closely set on reddish stems. The plant branches as freely and densely as a thorn or privet. The flattened heads of flowers are composed of numerous creamy-white blossoms, each with four segments, these heads are three or four inches across. Cornus paucinervis is also one of E. H. Wilson's finds, and hails from China. Award of merit, Royal Horticultural Society, August 1. Hon. Vicary Gibbs (E. Beckett, gardener), Aldenham House, Elstree.

Washington.

A SURPLUS OF STOCK.

We hear and read so much these days about the high cost of living, the enormous profits of the middlemen, the failure of the sugar crop and other woes of the ultimate consumers that it would appear on the surface that there is a widespread conspiracy to "soak" the ultimate consumer. However that may be, we hasten to state if such a combination exists that the florists are not in it. They can't get in. The usual form of procedure of the monopolies is to create a shortage and then raise the price, which brings us to the realization that there is a surplus instead of a shortage of flowers. This surplus was very noticeable during the past week. There was a surplus of roses and though carnations were not plentiful, there was more than enough to supply the demand. From the quantity of dahlias seen it might be inferred that most of the farmers have taken up their culture. Chrysanthemums are not yet factors in the market and it is fortunate that they are not, if they were, like the lamented Petroleum V. Nasby, we could see no hope but in a frost. However, all is not lost. Summer, though officially ended some time ago, lingered on till the last of September, but October opens with the unmistakable signs of fall, to-wit leaden clouds, frequently full of water, cool nights and renewed activity among the vendors of hot peanuts. At the furthest the outside stock can last but a short time and a continuance of dark weather will shorten the greenhouse supply. The wealthy people are returning from their summer travels and are beginning to make preparations for the "season." An old florist has said that the men of his craft are a "hopeful lot" and as the years go by his statement is amply verified. The growers go on adding yearly to their facilities; the retailers or a large part of them, are always striving for better locations, better stores and furnishings and better stock. Even the downtrodden street fakir's self-esteem is rising, for one of them had a man arrested here the other day for hitting him on the nose.

NOTES.

The parade of the Veiled Prophets September 26 was an imposing spectacle and Solomon in all his glory could not have had much on Grand Marshal W. F. Gude and his aides, several of whom were also florists. We have it from a person of considerable veracity that the horses they rode were Arabian stallions imported from Coffeyville, Kans.—at enormous expense. The shimmering purple and gold robes and fezes of the cavalcade transformed Pennsylvania avenue into a scene of oriental splendor. Some of the instruments of torture used on their victims by the members of this mysterious order were seen in the procession, very noticeable being the official goat gaily bedecked with flowers; in fact, the goat had all the flowers that were in the parade. This, we take it, was because he was an imported Cashmere goat that always had flowers in his native land and would not march without them.

J. Louis Loose, of the Washington Florists' Co., who has an extensive range at Alexandria, Va., has a great stock of chrysanthemums and carnations coming on. Mr. Loose is, so far as we are aware, the only grower in this vicinity who has any of the noted carnations, Alma Ward and Mrs. C. W. Ward. Another noteworthy feature at his range is a fine stock of ferns.

The Kramer Floral Co., of which Chas. Kramer, a brother to the irrepressible F. H., is manager, has recently moved into a large corner store, 901 King street, Alexandria, where their facilities are much more complete.

Jasper Wilson, son of the Secretary of Agriculture, who for a number of years has been his father's private secretary, has resigned to accept, it is said, a business position in some part of the west.

At the U. S. propagating gardens the culture of gardenias has recently been taken up and the crop is looking well. Roses, carnations and chrysanthemums are also in good condition at these gardens.

David Grillbortzer, another Alexandria grower, has a large area in roses and carnations, all of which are looking well. He has just completed a new house, 50x150 feet, for sweet peas.

SAVES MANY TIMES ITS PRICE

THE AMERICAN FLORIST COMPANY'S DIRECTORY saves many times its price to every one who catalogues or circularizes the trade. Fully revised to date of publication, it puts the mail only to live names, avoiding waste of postage and printed matter, time and labor.

Contains 590 pages, lists of Florists, Seedsmen and Nurserymen of the United States and Canada by states and towns, also alphabetically; firms that issue catalogues, foreign merchants, horticultural societies and much other up-to-date information which makes it a reference book of daily utility wherever a wholesale trade is done.

Published annually by the

American Florist Co.
440 S. Dearborn St. CHICAGO.

Quick Action

To move this seasonable stock quickly, we are offering it until sold at prices that will either sell it or show us that no one is in need of this stock.

THE BOOK OF GLADIOLUS

THE first authoritative book on this bulb ever printed in America, or possibly the world, issued April 1, 1911. This 120-page book, written by Matthew Crawford and Dr. Van Fleet, contains many chapters covering all sides of growing, propagating storing, etc., and also some pages of valuable cultural notes gathered from reliable sources. A necessity for both amateur and grower. The book is bound in cloth and fully illustrated.

PRICE, POSTPAID, $1.25

Landscape Gardening

PROF. CRAIG.

A course for Gardeners, Florists and Home-makers, taught by Prof. Craig and Prof. Beal of Cornell University.

Progressive Florists recognize the growing importance of a knowledge of Landscape Art. Gardeners who understand up-to-date methods and practice are in demand for the best positions.

A knowledge of Landscape Gardening is indispensable to those who would have the pleasantest homes.

CHRISTMAS PRESENT

GET ONE FOR YOUR BOILER

Heating System Never Worked So Well Before.

We have just gone through a rough cold spell for California, and the two Kroeschell Generators, Nos. 5 and 14, have done fine work. We are very much pleased with the results of both of them, and would not be without your Generator on any account. In half an hour we can get the pipes very hot to the far end of our last house which is over 280 feet from the boiler. We have never had our heating system work so well before, and believe it is due to the Generators.

G. BUTLER & SON, Santa Cruz, Calif.

The Burnham

"Never Had to Force the System," Says Alexander Dallas, Waterbury, Conn.

"The accompanying photograph is one of our new Lord & Burnham Iron Frame greenhouses, 63x250 feet, which we were induced to erect because of the very satisfactory results we have had from operating your smaller iron frame houses during the past 15 years.

"This house is heated by two of your No. 930 Cast Iron Burnham Boilers on a steam system of 1¼-inch pipe, which system we adopted after using your Cast Iron Boilers for years in a water system at one of our other plants. One boiler carried the house at 55 degrees Fahrenheit all winter, except for 15 nights when the temperature outside went below zero, at which time we hitched on the other boiler. At no time were we required to force the system.

"We take pleasure in recommending both your iron frame houses and your heating systems. Yours truly,

Alexander Dallas

Where There Is Condensation

——there is need for a **Morehead Steam Trap**
Condensation in steam lines is akin to matter out of place—means wasted energy.

If your lines are sluggish—if your houses are not of uniform temperature, write us. We guarantee to drain your lines perfectly—return the pure, hot condensation to your boiler without pump or injector or make no charge for the trial. Obey that impulse—write now.

Send for "Book on Condensation."

No 8 Trouble Talk

Second Series

I call it a swing talk, as it tells the difference between "running under" and "letting the old cat die."

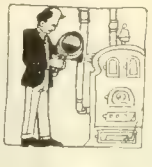
It seems only yesterday that you and I were kids and playing together with the old swing up in the orchard. Can't you think just how that crooked limb looked with the swing hanging from it? Sometimes I'd "run under" and give you good strong pushes, and then I'd sit on the grass and wait till the swing stopped of itself. You used to call it "letting the old cat die." Then again both of us would stand up on the swing board and working back and forth get it going till we could touch the branches—Bob Binker called it "churning." "Gee, but them was the happy days!" so Bob says whenever I see him. Last night as I sat on the stoop, with my feet up on the railing, smoking and listening to the robins say "good night" to each other, I got to thinking how much doing business is like swinging.

There are some concerns that always have some one "running under" and pushing things as hard as possible. There is "go" about such a firm, but it depends on the **one man**—the pusher, to keep things going. The fellow in the swing enjoys the profits—he doesn't work.

But somehow I am a little scarey of such a firm, because if anything should happen to that one man, the pusher, or he should take it into his head to sit on the grass and "let the old cat die," then what happens to your half completed work? Will it be tied up till things are straightened out—or what? I tell you, I am a little bit slow about doing much business with these small concerns.

Then there are concerns that are just like "churning": the whole force stands up in the swing together and churns. Everybody works—stockholders and all are part of the live working organization. Everyone is doing team work with everyone else: always the business swing is kept going full tilt till the very branches are touched. They are always busy as they can be, but never too busy, but they can be still busier. If your boiler breaks down just at sunset some zero night, you can depend on such a concern getting men there to work all night to fix it. If your heating system is cutting up pranks, you can depend on their sending a man who can promptly locate the trouble and tell you **right on the spot** just how to cure it.

If you want a boiler that you can depend on being the very best boiler money can buy for the purpose—best because it was designed for greenhouse heating—best because they make it themselves and know just how it's made—it seems to me such a firm is the only firm to buy it from. If you have a contract that you want to put through at a certain time, no matter who leaves the concern or happens to die, a firm with a good strong organization is then the one firm that can be absolutely depended upon.



And so when I think of that big factory over at Elizabeth; its bunch of mechanics busy as bees; the splendid men of experience at the head of all the departments and the abundance of working capital that Hitchings & Company have—I am mighty glad to be Trouble Man for such a concern.

So if any troubles turn up, or you want to turn any down, send for me—

Address your letter, just like your last one, direct to

The Trouble Man,
Hitchings & Co., Elizabeth, N. J.

Next Week's Talk is about camping out and what it taught me about a boiler.

Aphine

The Insecticide that kills plant Lice of every species

Just the remedy for the black aphis on chrysanthemums—red spider and thrips on carnations—greenfly on roses—mealy bug on gardenias and crotons—scale on ferns, palms and other decorative stock.

$2.50 per gallon; $1.00 per quart.

FUNGINE

Fungine has has no equal for carnation rust, rust on chrysanthemums and mildew on roses

$2.00 per gallon; 75c per quart.

There is but one convincing way for you to become familiar with the merits of Aphine and Fungine, and that is—test them out yourself—it will prove worth your while.

For Sale by Seedsmen.

Satisfaction guaranteed or money back; why try cheap substitutes that makers do not dare to guarantee?

THE M. A. SHOOTHOFF CO., MOUNT VERNON, N. Y.

R. A. C. Smith, of Belle Haven, Conn., Had Us Build This Beautiful Range Right by His Residence. S. A. Ford Is the Superintendent.

ALTHOUGH the photo can scarcely do it justice, you can see it is highly ornamental and must be a large one. And it is. The two houses between the palm house and work room are curved eave, while the large wing house is curvilinear, which makes a highly pleasing combination.

What a difference in this and the houses that used to be built that were so cumbersome and unattractive that they had to be located in an out-of-the-way place?

The English, you know, are in the habit of attaching theirs directly to their residence. We have built some that way up in Montreal. One particularly fine one was for Honorable Montague Allen. If you think it would interest your employer, will gladly send him a photograph.

And how are the prospects for building or making any additions? Would our catalog—the 100-page one—be any help to you? Glad to send it along.

SUGGESTIONS FOR PLANT GROWERS.

Dahlias.

Before the dahlias were through blooming they should have been carefully named and a label properly inscribed fastened to each plant that it is desired to save. As soon as the plants are killed by the frost they should be cut down and the tubers dug. Leave about six or eight inches of stem and firmly attach the label to this in such a manner that it cannot become loosened and lost. A good, dry cellar, either with a cement or earthen bottom, will keep them nicely through the winter, but it should be frost proof and not too near a boiler or heater. The tubers can be placed closely together and then covered with soil and they will come through the winter and the tubers be nice and plump in the spring. They should be occasionally examined to see that they are not getting too dry or shrivelling, if this happens cover the soil with papers and then sprinkle the paper and the soil will absorb the moisture.

Gladioli.

As soon as the frost has killed down the foliage the gladiolus bulbs should be lifted and dried off. Keeping the varieties separate, the bulbs with the tops attached, should be laid out in layers either on a light, dry shed floor, or on boards in the open air where they can be protected at night during frosty weather. A set of boards or frame shutters spread along on the south side of a building make a very fine place to dry them off and fully ripen the bulbs. Have plenty of covering handy that can be thrown over them on cold nights. When thoroughly ripened the bulbs can be broken from the tops and packed away. Look the bulbs over carefully for any diseased spots and if any bulbs having these are found, keep them separate from the sound bulbs, for it is the prevailing opinion that the disease may be communicated to a sound bulb by coming in contact with a diseased one. Of the finer varieties and those which it is desired to increase, save all the small corms, and these can be planted to grow on in succeeding years to make flowering bulbs. There are so many new and meritorious varieties now being placed upon the market that the grower who has a market for gladioli should make it a point to use these, for the advance has been very rapid and many of the newer ones are far ahead of the older varieties. This flower has forged rapidly ahead in the last few years as a cut flower, and with the improvement now going on is bound to retain its popularity.

Callas.

The calla bulbs that were planted in pots during August should now have a fine start and should be placed in the benches or pots where they are going to bloom. Make the soil good and rich—it can hardly have too much manure to get the best results, but do not use too fresh manure, have it partly rotted. If grown in pots and the bulbs are large give them a good size, nine or ten-inch is none too large, and pot firmly. After potting give the plants a good soaking and then withhold water until the plants have obtained a good foothold in the new soil, when they will require lots of water. Place them in a house where the temperature can be held at 60° at night if flowers during the winter are desired. Keep the plants tied up that the bloom may have straight stems. When cutting leaves be careful not to cut too low or the young flower that is enfolded in the leaf stem may be injured.

Mignonette.

As the weather grows cooler, the mignonette will begin to throw the long spikes that are so much desired by the best trade. The plants should be carefully kept tied or held erect for if they get bent over the stems will grow crooked and they are worthless. Growers adopt different methods for doing this, some grow them in wire rings similar to the carnation supports, others cut short brush sticks which they set between the rows of plants and still others run wire the lengthwise of the bench and tie strings across, making a square around each plant in which it will stand erect; other wires and strings being added as the plant

grows. Keep the plants growing very cool from now on, a house at about the temperature of a violet house, that is from 36° to 40° at night will produce the finest spikes of flowers. When the flower spikes begin to show keep the plants well disbudded, allowing only the center flower to bloom and all the side shoots should be cut off. This will have to be done very early with the first bloom that sets, for as soon as it forms, three shoots will immediately start to grow at the base of the flower; these should be removed as early as possible that the entire strength of the stalk can go into the terminal flower.

Cleaning Up After Frost.

Every spring, from all sections of the country, come reports of the great amount of damage being done by cutworms in the fields of many growers, and as they are very difficult to combat in the open ground, a great loss is consequently the result. While the cut worms are unsuccessfully fought in the spring, they can be overcome by a little labor spent in the fall. The moths lay their eggs in the fall on any vegetation that is left, either weeds or the refuse of the crops that is allowed to remain on the ground either standing or lying around. It is therefore clearly understood that the best thing to do is to clean up the field of all vegetation and burn it up or cover it with soil and make manure of it, and then plow the ground and turn under any small weeds that might harbor the eggs. Deep fall plowing pays anyway on the crop for the succeeding year, improving the soil, and if this small amount of work will get rid of the cut worms it will amply repay for all the labor and expense. Many use this old rubbish for the covering of tender stock, but leaves and straw are far preferable for this purpose, the vegetation that is left after being killed by the frost is too full of water and will lie too close, and after the fall rains will make too compact a mass upon the plants which it is intended they should protect, and as the freezing weather comes on become a solid mass of ice. It is much better to put all this rubbish in a compost pile and cover it with earth. The fermentation will kill all the insects and their eggs, and it will make fine manure for pot culture, or if this is not done dry it out thoroughly and burn it. The appearance of the ground will be improved, the soil benefited and the worms killed by giving the field a thorough cleaning and ploughing.

Pansies in Frames.

ED. AMERICAN FLORIST:

We planted our pansy seed in July and August and some of the plants are quite large and all are well rooted and growing nicely. Would it be better to place sash on the frames during winter or to cover the plants with straw and leaves? J. J. C.

While pansies can be safely carried through the winter by covering with straw, yet if planted in frames and the sashes are at hand it would be preferable to cover with sashes, especially in the colder sections of the country. If covered with straw and leaves, do not cover too heavily or the pansy plants will become heated and rot. If in frames covered with sashes, even if frozen hard, no harm will be done, but if a warm spell comes on during the winter when there is no snow covering the sashes, the frames will have to be ventilated by raising the sashes. W.

The Shepherd's Crook.

The expert floral designers have employed all their ingenuity and energy in endeavoring to so arrange bridal flowers as to break away from the conventional forms that were for years a part of the bridal decoration and introduce new and artistic features. The round bouquet has been supplanted by the shower bouquet and later the floral

The Shepherd's Crook.

ring was introduced, and with the bridesmaids the bouquet was superceded by the bunch to be carried on the arm, and later suspended by the loop of ribbon from the arm. A novel and unique arrangement for the bridesmaid is the shepherd's crook, which is very effective and can be made artistic if properly handled. The crook, which we illustrate, shows how beautiful and yet how simple an arrangement of this kind can be made. The bunch of roses were of Killarneys, with sprays of Asparagus plumosus, the crook being wound with satin ribbon to match the shade of the flowers, and George M. Geraghty, manager of Dunlop's, Toronto, Ont., whose artistic work has become celebrated, was the designer.

Any of the flowers ordinarily used in bridal work can be employed in this beautiful arrangement, but simplicity must always be considered, and whatever flowers are used no great attempt at elaboration should be made, for the shepherd's crook naturally turns the mind toward the simpler things and any heavy or elaborate cluster would spoil the effect and a piece of work of this kind can very easily be overdone. One or two sprays of orchids with Adiantum Farleyense, a bunch of sweet peas arranged loosely either with adiantum or Asparagus plumosus or any of the light, smaller flowers permissible for bridal occasions can be arranged in this manner but the large heavier flowers would be entirely out of place. The flowers must of necessity be of the best grade for the quantity of the flowers in each bunch should be small and so loosely tied that each individual flower will show for itself.

The crook must be smoothly wound with a satin ribbon to match the shade of the flowers and a large knot of the same ribbon with long bows and streamers hang from the flowers. A small knot of ribbon on the upper end of the crook makes a finish. The bunch of flowers must be fastened securely to the crook for during the wedding march the crook is used as a staff in true shepherd's style carried in the right hand and placed down on the floor with each step of the left foot, so the bunch of flowers must be securely tied so that there is no danger of its falling apart, and the fastening strong enough that it cannot become loose from the crook, while sustaining the jar which it will receive by being continually placed upon the floor during the marches to and from the altar or other location of the ceremony. The bridesmaids standing with their crooks at the altar or during the ceremony make a very effective appearance.

Fall Wedding Decoration.

A BALLROOM DECORATION.

Let us first consider the ballroom, with its wide expanse of empty space, for it opens up a wonderful field for the quick thinking decorator. In other words one must be a picture producer in thought, taking in the situation at a glance whether it calls for a light handling of the floral decorations or the heavy, massive style. The floral artist must thoroughly understand the conditions and allow them to determine the character of the arrangement. Brain and hand must act together to accomplish his work as quickly as possible and secure the happiest results in a ballroom decoration.

There must be a touch of originality in everything, especially where there are mural designs and the artistic capacity of the room ably considered. A lattice work of thin wood gilded should go all around the ballroom as a wainscoating, over which is draped grape vines with large bunches of

STANDING WREATH AND HARP ARRANGED BY LUBLINER & TRINZ, CHICAGO.

grapes, allowing them to fall in a careless fashion. Around the grapes, arrange maidenhair ferns in sufficient quantity to offset the heaviness of the grapes. The bunches should be suspended from the lattice by wide satin ribbon of one or two shades lighter color than the grapes used. The green and the blue grapes combined make a fine effect. Above this lattice have panels of autumn foliage, in the center of which place bunches of flowers with maidenhair fern falling to the top of the lattice. On top of each of these panels also arrange flowers in an inverted crescent shape. The number of panels must be determined by the size of the wall which they are to cover. Three as a rule are a good number.

For the center aisle on either side suspend four designs made in umbrella shape. Have the wire frame flat on top and about the size of an ordinary parasol. Cover the top with flowers, using maidenhair to fall over the edge as a fringe; line it with grape foliage and underneath suspend large bunches of hothouse grapes from the center. If possible use miniature electric lights in green fringe. Cover the rope or wire from which it is suspended with asparagus. In between and connecting each design use the two colors of sash ribbon as used on the lattice, tying a large knot in the center and from one loop arrange an artistic spray of foliage. This ribbon should be formed in crescent shape which requires deftness in obtaining the desired effect.

For the bridal bower, cover it with green and blue grapes and their foliage, draping the grapevines at the back and sides, tying the sides back a little with sash ribbon of the two shades previously mentioned. Use palms where necessary as well as smaller ferns to finish. Arrange grape foliage over the doors and on chandeliers and other fixtures.

For the supper table use the parasol suggestion, making it of lily of the valley and placing it on a mirror; at the foot of the center support arrange a garland of lily of the valley and around the edge of the mirror group bunches of blue grapes with their rustic branches so arranged as to give it a finish combined with a maidenhair border resting flat on the table. Use candelabrae with lily of the valley shades. Use asparagus in combination with the grape foliage to soften its effects where necessary.

For the bride use white orchids with a lily of the valley shower. The bridesmaids can effectively carry bouquets made colonial fashion with lily of the valley around the edge of bouquet, using white sash ribbon of gauzy texture as a finish.

SPRINGFIELD, O.—H. N. Siegenthaler having vacated his store, the Springfield Cut Flower Co. will occupy it immediately.

Chicago Florists' Club Anniversary.

There was a very large attendance at the twenty-fifth anniversary meeting of the Chicago Florists' Club, held at the Union Restaurant October 5. President Philpott called the business meeting to order at 7 p. m., when the following were admitted to membership: D. E. Freres, 152 North Wabash avenue; Ignatz Stachowiak, 1304 Marion street; Paul Weiss, Maywood; Arthur Schmidt, Maywood; Henry Meyer, Maywood; Paul Amling, Maywood; Wm. Burhop, Maywood; Walter Amling, Maywood; Wm. Lorman, 1625 Hudson avenue, and M. H. Mann, 5504 North Clark street. Nominations for membership at this meeting were: Richard Schmidt, 4911 Quincy street; John Huebner, 11 West Randolph street, and E. O. Orpet, Lake Forest, Ill.

President C. L. Washburn, of the Illinois State Florists' Association, who had just returned from the state fair at Springfield, being called upon, stated that the exhibits in the floricultural classes were most meritorious and announced that the next meeting of his organization would be held at Joliet, March 5. W. N. Rudd exhibited Mrs. A. McCrea, No. 5508a and 14009a carnations, and Elmer D. Smith, Adrian, Mich., Smith's Advance and Unaka chrysanthemums, all of superior quality. Further routine business having been quickly disposed of, the speaker of the evening, Elmer D. Smith, presi-

dent of the Chrysanthemum Society of America, was presented and delivered a very instructive address on "Chrysanthemums and Their Culture," which will be found elsewhere in this issue. A cordial vote of thanks was tendered Mr. Smith, to which suitable response was made. The members and visitors then adjourned to the large banquet hall, where the ladies joined them, and the entire party, to the number of 134, discussed the following menu:

MENU.

Blue Points
Olives Radishes
Celery
Chicken Broth en Tasse
Crab Meat a la Maryland on Toast
One-half Broiled Squab Chicken
French Fried Potatoes Green Peas
Lettuce and Tomato
Ice Cream Cakes
Coffee

When the coffee and cigars had been served, President Philpott read a congratulatory telegram from Secretary John Young on behalf of the New York Florists' Club and then presented F. F. Benthey, second president of the club, as toastmaster. Mr. Benthey referred to the early history of the organization (account of which will be found in THE AMERICAN FLORIST of September 30, page 508) and dwelt at length on the officers and members who have passed away. He then called upon J. C. Vaughan for an account of early floriculture in the west.

Mr. Vaughan spoke of the growth of the business as being in line with that of other branches of industry, starting with the recognition of cut flowers rather than plants as daily necessities, Miller, Hunt & Ludlow, by establishing a plant at Terre Haute, Ind., to grow for this market, being the first to give practical evidence of these conclusions. The cut flower growers, he said, have made rapid strides and the plant growers are far behind.

President Hunkel, of the Milwaukee Florists' Club, was the next speaker, and after referring to the strong bonds of friendship and sympathy which have always existed between the members of both clubs, reminded his audience of the great flower show which will be held at Milwaukee next month, and closed his remarks by presenting the Chicago Florists' Club with a magnificent loving cup on behalf of the members of his club.

President Asmus, of the Society of American Florists, spoke of the work which his organization is constantly doing for all branches of the trade, and read a letter from Vice-President-Elect August Poehlmann regretting his inability to be present on this auspicious occasion.

President Windler, of the St. Louis Florists' Club, referred to the pleasures of the occasion, and was followed by W. N. Rudd; Harry Balsley, who invited all those present to the rose, carnation and sweet pea exhibitions and

meetings at Detroit next January; P. J. Foley, who spoke for the ladies; A. C. Kohlbrand, H. N. Bruns, Elmer D. Smith and F. H. Holton.

The visitors included Roy Currie, F. H. Holton, G. H. Hunkel, H. V. Hunkel, A. Kellner, W. Kennedy, A. Klokner, A. Leideger, A. Lietz, E. J. Manos, C. Menger, F. Mueller, G. C. Mueller, Peter Nohos, E. Oestriecher, C. C. Pollworth and wife, Gus Rusch, Wm. Zimmerman and Nic Zweifel, Milwaukee, Wis.; Geo. H. Angermueller, Wm. Osseck, R. J. Windler and wife, Chas. Young and wife, F. X. Gorly, D. Geddies, C. C. Sanders, Edwin Denker and Oscar Huettemann, St. Louis, Mo.; F. H. Venneman, Kirkwood, Mo.; Dr. A. S. Halstead and wife, Belleville, Ill.; Elmer D. Smith, Adrian, Mich.; Homer Wiegand, Indianapolis, Ind.; Harry Balsley, Detroit, Mich.

PRESIDENT PHILPOTT'S COMMITTEES.

In connection with the forthcoming convention of the Society of American Florists, President Philpott has announced the following committees:

Executive Committee.—H. N. Bruns, chairman; H. E. Philpott, A. C. Kohlbrand, Arnold Ringier, Alex. Henderson, E. C. Amling, M. Barker, E. F. Winterson, P. J. Foley, A. T. Pyfer, and Fred Lautenschlager.

Entertainment Committee.—A. C. Kohlbrand, chairman; H. B. Howard, Frank Pisternick, D. A. Robertson, W. P. Kyle, W. N. Rudd, C. A. Samuelson, Wm. J. Smythe, A. Lange, E. E. Peiser, W. F. Martin, Ed. S. Enders, Geo. Asmus, Herman Schiller, Fred Lautenschlager, H. E. Philpott, W. F. Keimel, A. I. Simmons, and John Poehlmann.

Souvenir Album Committee.—A. Henderson, chairman; Fred Lautenschlager, John P. Degnan, Fred Longren, A. Miller, and E. A. Ollinger.

Finance Committee.—H. E. Philpott, chairman; Aug. Poehlmann, Frank Johnson, Frank Oechslin, C. L. Washburn, Peter Reinberg, N. J. Wietor, C. M. Dickinson, F. F. Benthey, Fred Sperry, W. C. Wendland, P. J. Schupp, E. Buettner, and Fred Hoerber.

Reception Committee.—Arnold Ringier, chairman; Andrew McAdams, C. F. Frauenfelder, C. H. Fisk, Alois Frey, A. F. Longren, Peter Olsen, John Muir, J. C. Vaughan, H. Cheeseman, E. Wienhoeber, Fritz Bahr, Anton Then, Gus Swenson, Geo. Klehm, H. Yepsen, Paul Amling, Harry Blewitt, and C. W. Johnson.

Press and Advertising Committee.—M. Barker, chairman; E. A. Ollinger, T. E. Waters, Geo. Asmus, H. C. Lubliner, V. Bergman, and J. B. Deamud.

Decorating Committee.—Louis Wittbold, chairman; Herman Schiller, W. F. Kidwell, John Muir, Frank Oechslin, A. T. Hey, H. N. Bruns, Jas. Curran, H. R. Hughes, F. J. Kral, Jr., and John Mangel.

Allied Trades Committee.—Fred Lautenschlager, chairman; R. S. Woodyard, N. J. Rupp, Fred Dietsch, H. S.

Garland, Philip L. McKee, and Howard Young.

Sports Committee.—E. F. Winterson, chairman; Allie Zech, C. W. McKellar, Frank Ayers, Eddie Schulz, L. H. Winterson, Wm. Graff, and Otto Goerisch.

Transportation Committee.—P. J. Foley, chairman; W. L. Palinsky, C. E. Pruner, Chas. Arnold, and A. H. Schneider.

Badge Committee.—E. C. Amling, chairman; M. Fink, H. Wehrman, Max Awizzus, and Erick Johnson.

Hotel Committee.—... T. Pyfer, chairman; John Michelson, D. E. Freres, and J. Strauss.

Use of Hot Water in Forcing.

In the report of the botanical department of the Wye College, S. T. Parkinson describes some interesting experiments in the use of hot water for the purpose of accelerating the growth of plants placed in the forcing pit. Two years since Professor Molisch, of Prague, published a paper in which he suggested that perennial plants, while in their resting stage, should be dipped in hot water previous to their being placed in the forcing pit or house. In his paper Professor Molisch distinguishes in the resting period, between the rest that is inherent to the plant and cannot be altered, and the rest that is dependent on external conditions and can be modified. By steeping the plant in hot water at the proper time the latter rest is eliminated, and its cells at once renew their activity. By this means the treated plant obtains a start over that which is untreated, and attains its full development in a much shorter period. Mr. Parkinson has carried out a number of experiments to test the efficacy of hot water, and in the course of these he found that an exposure of about twelve hours to a temperature of 95 degrees F., or, in the case of soft plants, such as seakale, to 85 degrees F., just after the period of "deepest rest," i. e., the end of November or beginning of December, led to very rapid growth. One of the illustrations accompanying the report shows that the effect of water on some astilbes (not spiræas, as stated in the report) was very considerable. Plants that were dipped in a quite dormant state on November 25 had made considerable growth on December 13, when they were photographed, while the untreated plants showed no signs of renewed activity.

To Improve Every Lot.

An original scheme for the maintenance of Windsor Square, the new residence park in Los Angeles, Calif., in which quite a number of wealthy families have already decided to make their homes, has been started. By a community fund it is proposed that there shall be no unimproved lots in the entire tract. The sum of $3 per front foot is to be charged against every lot in the park. With this money there will be spread lawns, shrubs planted and trees grown, so that when a purchaser buys a lot on which he does not immediately erect a home, there will always be a miniature park, sightly to those others who have their residences in the tract. One chief landscape artist and his assistant will expend this money in care-taking.

PASADENA, CALIF.—The final arrangement for the semi-annual flower show of the Pasadena Gardeners' Association have been completed, the date fixed for October 27-29, and John Albrecht appointed manager.

CHRYSANTHEMUMS

Chrysanthemums and Their Culture.

Paper read by Elmer D. Smith, Adrian, Mich., before the Chicago Florists' Club, October 5, 1911.

Although most of those present are directly or indirectly interested in this subject, yet I venture the large majority do not consider the volumes that have been written during the past decade, treating upon every phase of this important branch of floriculture. The trade papers have from time to time presented excellent cultural notes, and several books have been published by able writers, so that our files are filled with compilations of exceptional merit, and adequate to the varied needs of this vast country. Confronted by these facts it would be the height of folly to attempt to offer food for thought along new lines, the tillage has been nearly or quite complete. And furthermore, this is a very complicated subject when we consider its diversified interests. For these reasons it would seem wise to present only the most important features, and presuming the majority of your members are most interested in commercial cut blooms, I will endeavor to give attention to this aspect.

Before discussing cultural methods let us first consider the best varieties for our purpose. As the early kinds are first on the market they are naturally initial in these deliberations. I have some misgivings in mentioning those I consider best for this purpose, as it may appear egotistical on my part inasmuch as the earliest white, yellow and pink originated with us. Smith's Advance and Golden Glow are the earliest white and yellow and may be had from July onward. Unaka for October first is the earliest large flowering pink.

There has been considerable discussion as to the propriety of having varieties which mature before the last of September; this point must be determined by those engaged in this industry. Personally I would not advise growing in large quantities for the wholesale market, unless the crop is controlled so as to bring them in about September 15 and later. The grower who retails his product may with impunity provide limited quantities earlier in the season and use them to good advantage. The question is one of supply and demand which governs the florist's entire output, and as the fall trade does not begin until the latter part of September, it is a natural supposition that large quantities could

LOVING CUP PRESENTED BY THE MILWAUKEE FLORISTS' CLUB TO THE CHICAGO FLORISTS' CLUB ON ITS 25th ANIVERSARY, OCTOBER 5, 1911.

BANQUET AT THE TWENTY-FIFTH ANNIVERSARY OF THE CHICAGO FLORISTS' CLUB, OCTOBER 5, 1911.

not be disposed of to advantage before there is a real demand.

For early blooms the most important feature is early planting, and just when this should be done depends upon the date they are to be cut. Smith's Advance and Golden Glow planted the first of May, and buds selected about June 25, should mature the last half of August. Successive plantings up to early June and securing first bud will give a continued crop to late October. Unaka planted May 1, with buds secured August 5 to 10, should all be ready to cut the first half of October, as it is a strong grower with stems four feet, incurved blooms over six inches in diameter and very similar to Wm. Duckham in color (possibly a little brighter)—it has no rival as an early pink. At the present time October Frost and Donatello are making their appearance, both are good to follow Smith's Advance and Golden Glow, but should be planted in May or early June to secure best results.

For October 15 to November 1, we would plant Oroba, a white coming in a few days in advance of Ivory, producing larger blooms and is of a splendid sturdy dwarf habit. Chrysolora for yellow is unsurpassed for this period, being larger than Col. D. Appleton, and is 15 days earlier, has stronger stem and of the best incurved form. Gloria would be our choice for pink. These three, like the earlier kinds, are more satisfactory when planted fairly early, not later than June 15 and secure buds about August 15, which would insure the crop cut and out of the way before the midseason or November varieties are ready. This brings us up to the midseason varieties which are so numerous, and in fact, there are so many good kinds to select from it does not seem necessary to mention them. The above remarks also apply to the late flowering section.

Pompons, anemones and singles possess desired qualities to a degree, and are of special value to those who retail their cut and cater to the best trade. They lend grace and beauty to floral arrangements, in fact, the best effects can not be attained without them. The singles are more fragile, and are not so well adapted for consignments that necessitate rehandling.

Soil is the first item to be considered under the head of cultural methods. Old sods, cut thin, from a moderately firm soil, and piled with one-fifth to one-sixth their bulk of cow manure, six months in advance, furnishes the best material for filling the bench. Some advocate a larger quantity of manure, but we find the plants do not need it in their earlier stages of growth, also the wood is firmer, and ripens better than where nitrogenous matter is abundant. We prefer giving food later when the plant is strong and the roots active. Those who wish to utilize old soil will meet with very good success by using half new and half old. We prefer placing the new at the bottom of the bench and if prepared compost is not at hand, fresh cut sods chopped, and put through a soil mixer will make an excellent substitute. As previously stated the early sorts should be planted if possible early in May.

We have calls for early varieties late in July, but the fallacy of such a course is apparent when we consider that instead of planting, they should be selecting buds. The midseason and late will do well if planted in June. It is true, fairly good results are the outcome when this operation is deferred to the succeeding month, but the flowers are seldom as large and fine in finish as those which have had ample time to develop a strong plant before selecting the buds. Early planting in only moderately rich soil gives the best stem and foliage for the commercial grower, namely, smaller leaves on short jointed and firm wooded stems. With the foundation constructed thorough and complete, the building of the bloom will practically take care of itself.

It is unnecessary to go into details in the operation of tying, this work should be done when the plants are a foot in height, or at least before there is danger of them toppling over. From this time on until the buds appear, weeding and watering are the most urgent matters requiring attention. Less water will be required during the first stages of growth, with increased quantity as they gain strength and more foliage.

The date for buds to appear is governed to a large degree by the climatic conditions. During my visit to California (the state of many climates), I was much impressed by the fact that those portions of the state enjoying a cool air produce the earliest blooms, and the late ones are from localities more torrid. At Los Angeles I was told the first in the market come from the growers near the coast, while the late ones come from the foot hills of the mountains only 20 miles away. No fixed dates can be given, as they vary according to the conditions of the weather during July and August, the cooler the earlier, and the warmer the later, this change in construction takes place. On one occasion we had W. H. Chadwick immediately follow Ivory and at other times they have been 60 days apart.

With an average season in this section, flowers for September are from buds selected about July 1 to 15, for October, August 1 to 15; for November,

August 25 to September 15; for December, September 20 to October 10. The dates given are only approximate at best, as some varieties develop more rapidly than others. The bulk of chrysanthemums are planted from June 15 to July 15, and those best adapted for this purpose are such as produce perfect blooms, from buds selected from August 25 to late September.

Many of the kinds shown at the exhibitions look beautiful, but are often misleading to the novice, for when placed under the conditions which usually prevail on commercial places, are useless. It is far better to rely upon the judgment of some competent person than to select from the show boards, unless you are well versed in these matters.

I am pleased to state that shading is not practiced as much as in former years. Sunlight is a prime factor in producing strong sturdy growth; a light shading is, however, beneficial to all varieties showing color before October, and it is often necessary to continue later, providing bright sun prevails and the temperature rises above normal.

What form of nourishment to supply is a topic of considerable importance; very few growers entirely agree on this subject. Bone meal, cow, sheep, and, in fact, almost any kind of manure, is beneficial, but their real value depends upon the amount of plant food they contain, when considered in ratio to price paid. All, or part of those mentioned may be essential in the production of the very largest blooms, which find their way to the exhibitions, but if my object was solely the production of high grade commercial stock, I would prefer a complete concentrated chemical fertilizer, say, one containing about 50 per cent plant food. While it costs more per pound than the natural products, it will supply nearly 100 times the amount of the required elements, namely, nitrogen, potash and phosphoric acid. To make this comparison more comprehensive, one pound of such chemicals is equal to nearly 100 pounds of manure. The first cost would be greater for the chemicals, but we should bear in mind that the entire 50 per cent plant food is available as soon as put into solution, on the other hand, the manure requires considerable labor to bring it into such a form. In the first place, the chemicals are placed in a tank of water, and in a few hours are ready to apply with a hose, and in the second, the material must either be used in the form of top dressing, or reduced to a liquid before it is available.

I am frank to admit there is less danger in injuring a crop with manure than chemicals, unless the latter is judiciously applied. Most of such materials are used too strong. Ten years ago we were applying at the rate of one ounce to five or six gallons of water, now the ratio is one to 20. Weak solutions are much safer, affording perfect control. Varieties of robust constitution which are usually able to assimilate more food, can be treated at shorter intervals. With the soil recommended 30 pounds of such concentrated chemicals at a cost of less than $10.00 is sufficient for 30,000 to 40,000 plants. The labor in preparing manure for such a number of plants would alone far exceed the figures given.

There are a few insects which must be kept in check, if our plants remain in a healthy condition, aphis are the most abundant. The past two years we have used hydrocyanic acid gas with most satisfactory results. Its advantages over the various forms of nicotine are that it kills every aphis in the house, and they do not reappear for a month or more. We have fumigated but three times since the middle of May and our stock will be clean into November. A high grade of cyanide is most effective and we prefer the sodium to the potassium form. W. J. Keimel, Elmhurst, Ill., suggested in one of the trade papers one pound of Paris green to five pounds of brown sugar, using one ounce of this mixture to one gallon of water for thrip. We find this is equally effective in destroying the larva of the leaf tyer, and does not discolor the foliage.

The achievements in floriculture are wrought not by any one thing we do, but by the many things given attention at the proper time, and chrysanthemums are no exception to this law. I think all of you will agree with me that superiority in knowledge is not as essential as the ability and energy to attend promptly to every detail, which are of vital importance in marking the degrees of our success. Nature provides a way and we endeavor to assist.

George C. Watson.

Dinner to George C. Watson.

The dinner complimentary to George C. Watson given at Dooner's on October 6 was successful in everything excepting that it leaked out in some way and was not the great surprise intended. The tables were nicely decorated, four of them representing the seasons—spring, summer, autumn and winter. The head table was gay with brilliantly colored croton leaves. Palms and other foliage plants hid the walls. John Westcott superintended the decorations.

W. Atlee Burpee was toastmaster, and right well did he present the various speakers, whose eulogies of George C. must have made him think that

BANQUET OF THE FLORISTS' CLUB OF PHILADELPHIA, ON THE 25th ANNIVERSARY, OCTOBER 3, 1911.

See Issue of October 7, Page 568.

DISPLAY OF FLOWERS AND FLORAL DESIGNS AT ILLINOIS STATE FAIR, SPRINGFIELD, OCTOBER, 1911.

there were many who appreciated him and his work and were good enough to tell him of it while he was still with them.

Among the gentlemen from out of town were Wm. J. Stewart, J. K. M. L. Farquhar and P. Welch of Boston; W. C. Langbridge, Albany; P. J. Lynch, West Grove; H. A. Bunyard, New York. These gentlemen, with other personal friends, mostly well known members of the trade in this city, sat down to the banquet. After the good dinner, at which there was plenty of liquid inspiration, they all vied with one another in expressing to their guest their good will and best wishes for many returns of the day. Telegrams and letters were read from a number unable to be present, all showing high regard for the honored man. After some excellent music from the orchestra, excellent singing by some of the guests, George Earl presented Mr. Watson with a fine gold watch, which will be a life-long souvenir of the occasion. Mr. Watson was overwhelmed with the many good words and deeds, but was able to make a nice little speech, thanking the assemblage for the watch and hoping to be able to keep himself up in their esteem. The following gentlemen were present:

John D. Allwood, John H. Ansley, Geo. Anderson, Louis Boss, W. Atlee Burpee, John Burton, Geo. J. Brennen, Thos. H. Bird, Geo. D. Clark, Dennis Connor, George Craig, Robert Craig, Thos. Daly, George Donnelly, Edw. C. Dungan, E. J. Dooner, T. F. Dooner, Howard M. Earl, Ed. Flood, Daniel Hausernon, Thos. F. Hogan, Paul Huebner, Robert Kift, John Lamb, Samuel S. Pennock, Alphonse Pericat, Howard Reed, David Rust, Harry C. Stahler, Chas. Simms, John Trainor, E. M. Tyrell, John Westcott, Philadelphia; P. Welch, J. K. M. L. Farquhar, Wm. J. Stewart, Boston, Mass.; Harry A. Bunyard, Gus Gossler, New York; Harry L. Holmes, Harrisburg, Pa.; Geo. W. Kerr, Doylestown, Pa.; W. C. Langbridge, Albany, N. Y.; P. J. Lynch, West Grove, Pa.; Alex. B. Scott, Sharon Hill, Pa.; Dr. John H. Washburn, Farm School, Pa. K.

Seed Trade in New Zealand.

The seed business of New Zealand is of considerable importance, over $600,000 worth of grass, clover, and other seeds being exported from the Dominion in 1910, and about $500,000 imported. During the next few months the New Zealand seed market should possess an exceptional interest for American seed growers and dealers, states Henry D. Baker, vice-consul general, as owing to the recent drouth, seeds are now very scarce and selling for prices about 40 per cent higher than a year ago.

It is understood here that there is a scarcity in the United Kingdom, which is ordinarily the leading source of supply, consequently there seems a probability of unusually large imports from the United States. Though New Zealand ordinarily exports a much greater quantity of seeds than it imports, yet for the near future the reverse promises to be true.

The principal countries that supplied grass and clover seed to New Zealand in 1910 were the United Kingdom, from which 8,776 hundredweight were imported; Germany, 5,457 hundredweight; Canada, 2,600; United States, 2,325; and New South Wales, 1,935. The total imports in 1910 of grass and clover seeds amounted to 21,840 hundredweight, and the total value of all kinds of seeds imported was $487,190. During the preceding year the total imports were valued at $604,526. The value of the imports of seeds from the United States in 1910 was $30,956.

KINDS OF GRASSES IMPORTED.

New Zealand takes from the United States, in about the order named, cow grass and red clover, white clover, timothy, poa pratensis (known in the United States as Kentucky blue grass), and alsike. Some lucerne (known in the United States as alfalfa) is imported from the United States and also from England and Australia. Its particular advantages are just beginning to be appreciated in New Zealand, and imports are likely to increase. It grows luxuriantly in New Zealand on chalk or limestone soils, but is not a success in the colder mountainous districts.

Kentucky blue grass, known locally as twitch, thrives here on light, dry soils rich in humus and will grow the year round if the weather is not too severe, but it is not considered suitable for temporary pastures, owing to its strong creeping roots; on certain soils it develops such a rank troublesome growth that it is regarded as a weed and every effort is made to exterminate it. Its most successful use is in restoring the vegetation of denuded arid country in the interior, especially on hilltops.

Alsike is well suited for New Zealand's heavy soils, in which it is very lasting, but is not recommended by local seed dealers for light soils, on account of its roots being surface feeders. Timothy is used chiefly in heavy loams and clays, and nearly all permanent seedings for heavy soil contain a few pounds of timothy. White clover is used on all classes of soils that contain sufficient lime, provided they are not waterlogged. American cow grasses and red clovers are apparently more sought after here than any others from the United States. Cow grass is

used for long duration pastures, and red clover for two-year pastures, especially as preliminary to the growing of wheat. The greater part of New Zealand's clover seed is imported, as it does not seem to appear economical to the local farmers to save clover for seed.

EXPLANATION OF HIGH PRICES.

For the information of American seed dealers who may be interested in the unusually high prices prevalent in New Zealand at present I submit the following quotations furnished today (July 29) by a local seed house.

Kinds.		Price.
Poa pratensis	hundredweight	$26.30
Cow grass	do	18.00
Red clover	do	34.00
White clover	do	22.80-28.80
Timothy	do	13.80
Alsike	do	18.00
Cocksfoot	pound	.19
Rye grass	bushels	1.02-1.92
Fiorin	hundredweight	21.60
Chewing's fescue	pound	.14
Hard fescue	hundredweight	19.20
Mustard	do	9.24
Meadow foxtail	do	22.80
Crested dog's-tail	pound	.21
Lucerne	hundredweight	25.44

In explanation of the high prices it might be mentioned that last season's drouth prevented the saving of the customary amount of seeds and that the need of seeds has been increased by the killing of pastures by drouth and by fires. Moreover, excellent prices for wool and dairy products have stimulated greatly the utilization of wild bush lands for sheep raising and dairying, and, of course, all such land after being cleared of its timber must be sown in grass or clover. In the North Island of New Zealand many thousands of acres are being opened up this year. It has also been demonstrated that worked-out kauri gum lands in the northern part of North Island, which were formerly considered worthless once the gum had been taken out, can be profitably utilized by sowing various clovers and grasses. In the volcanic country in the central part of the North Island, where the pumice lands were formerly considered of little or no value, it is found that red clover tends to redeem the soil. For some time red clover failed to get a good start here, but success was finally secured through the introduction of bumblebees for fertilizing purposes. Owing to the presence of these bumblebees there seems no difficulty now about raising clover in any part of the pumice country, and clover seed in this district appears to have unusual plumpness and vitality.

EXPORTS—AREA IN GRASS.

In ordinary years, notwithstanding its own important uses for grass and clover seeds, New Zealand exports much more than it imports. The chief countries buying New Zealand grass and clover seed in 1910 were the United Kingdom, which took 29,777 hundredweight; Victoria, Australia, 10,190; New South Wales, 3,452; Tasmania, 2,473; east coast of the United States, 2,355; Germany, 1,317; and Denmark, 1,074.

The seeds bought for the United States in 1910 were as follows: Cocksfoot grass $21,909, and rye grass $26,283, exported from Dunedin, the chief center of the seed business in New Zealand; cocksfoot grass $31,203, rye grass $1,623, and other grasses $1,000, from Christchurch; various grass seeds $3,635 from Wellington, and $613 from Auckland. These figures are taken from summaries of consular invoices in the four cities.

The latest published returns of the area in grass in New Zealand are for 1908, which give an area of 13,623,528 acres, of which 4,755,323 were plowed land, and 8,868,205 not plowed. The area in native grasses is given as 22,524,406 acres. The total area, including grasses of all kinds, was therefore 36,147,934 acres; and as only 1,890,630 were in crops the same year, 52,150 acres in fallow land, and 113,635 in orchards, gardens, etc., the proportion of pasture lands to cultivated lands was thus about 18 to 1.

USES OF COCKSFOOT AND RYE GRASS.

As regards cocksfoot and rye grass, for which there is the chief demand for export from New Zealand to the United States, and in the production of which New Zealand appears especially to excel, I have obtained from a leading seed dealer here descriptions as to their special uses in this country, as follows:

"Although cocksfoot is widely used for surface sowing and is the mainstay for permanent pastures in hilly country, it is also most valuable in good soil on the flat, where it will produce an enormous amount of leafy herbage of good quality. On such land seed stalks do not change so quickly to woody fiber, as on dryer soil, and therefore its feeding value is maintained for a longer period. It is a quick-growing grass and analysis has proved that during the spring there is considerably more nutritive matter in the herbage than during the midsummer. For hay this grass is of very little value; although producing plenty of bulk the quality is poor, being of woody fiber. On suitable soil this grass is permanent and holds to the ground better than rye grass, owing to the fact that it is fibrous and much branched, with deeply descending roots. It withstands drouth and is considered one of our most valuable grasses for surface growing.

"Perennial rye grass is our most valuable grass, and no permanent pasture is laid down without a large percentage of this variety. On suitable soil rye grass is permanent. Good loams and even stiff clays are suitable for its best development and longevity, provided the soil has good drainage. Light, thin and stony soils, however, are hardly suitable, and do not give the grass the best chances, as the roots are surface seeders. The most important characteristics of the rye grass are that it will grow under conditions that are fatal to other grasses; it is the most certain to germinate, and is uninjured by the tread of stock, even on unsuitable land; it grows and covers the ground rapidly, and thus keeps down weeds and will protect the more delicate germinating and slow-maturing grasses, and makes way for them as they become established. It is of the utmost value for hay and with clovers will produce the sweetest and most valuable fodder for winter feed."

AREA IN COCKSFOOT AND RYE GRASS—SEED IMPROVEMENT.

The last annual report of the Department of Agriculture of New Zealand shows that during the 1909-10 season 56,550 acres of land were devoted to the cultivation of rye grass. The total yield was 1,547,912 bushels, and the average yield 27.37 bushels per acre. The acreage of cocksfoot was 29,500, the total yield being 5,185,310 pounds, and the average yield per acre 175.77 pounds.

The industry of growing clovers and grasses for seed in New Zealand has usually proved quite lucrative. Certain seeds originally imported have, under the influence of the favorable soil and climate of this Dominion, assumed a vigor unknown to them before, so that they can now be extensively exported. On this account some of the larger

TABLE DECORATIONS AT ILLINOIS STATE FAIR, SPRINGFIELD, OCTOBER, 1911.

seed merchants of Great Britain occasionally send agents here with a view to inducing farmers and others to grow certain kinds of farm and garden seeds which they think more capable of improvement here than in their own country. There has always been a disposition to encourage the importation of seeds that may produce successful results here. Among the seeds that appear to have shown conspicuous improvement are edible seed peas, which are grown in the South Island, and which have now achieved such a reputation that they are being exported to many different parts of the world.

CHRYSANTHEMUMS AT WIETOR BROS., CHICAGO.

Roserie on the Left, October Frost on the Right.

WITH THE GROWERS

Wietor Bros., Chicago.

While early in the month of October is not the opportune time to see a range of glass in its best possible condition, yet what can be accomplished at this early date is plainly visible in the condition of the crops at the well-known plant of Wietor Bros. on Devon avenue, Chicago. We remember several years ago when visiting one of the most jovial and optimistic growers in the eastern section of the country, he placed us in charge of his son who had recently assumed the management of the greenhouses, and said, "Show him around, but when you chance to come to anything that is not in first class shape draw his attention to something else on the other side of the house." We could not help thinking after being shown through this immense range of nearly 1,000,000 feet of glass that nowhere in all the houses was there any occasion for our genial guide to draw our attention from any of the growing crops, for everything appeared to be in the best possible condition. The roses were all in the best of health, showing the care and culture necessary to have them in such splendid shape this early in the season. The carnations were all well established, producing flowers that would rival many in mid-winter season, and the chrysanthemums just coming into bloom promised an excellent crop of high-grade commercial flowers, and this firm, which for so many years has been renowned for furnishing their customers with the best the market affords, has great promise to living up to or excelling that well-earned reputation.

The American Beauty roses are a sight worth a long journey to see, for the growth is luxuriant, and although not by any means as yet in full crop, are bearing flowers of beautiful color with long, strong stems with the finest of foliage; not a blemish of any kind could be seen on any of the stock and a great crop is promised for the coming year, and it certainly looked that a continuous cut would be had throughout the season. Killarneys were a sight to behold—house after house timed so as to follow each other in succession, and the healthy young growth of that bright pink shade of the foliage that betokens the finest condition and the best of culture. Richmond, although not so far advanced as the other roses, for it was evident that Christmas was the goal aimed at with this popular rose for the holidays, was showing up in good shape, the breaks being exceptionally strong and healthy. Mrs. Jardine was also in the best of condition and the roses that are now being cut are of most excellent quality. This rose is a great favorite with this firm and as grown at these houses is worthy of the many economiums bestowed upon it by the proprietors. Uncle John is well grown and at the present some very beautiful blooms are being marketed. White Killarney is the mainstay for white and the plants vie with the parent, the pink variety, in growth and bloom. All these roses are in such fine condition that an immense cut of unsurpassed quality is promised and an idea of what this firm will have to handle during the year can be obtained from the quantity of plants now being grown, the following being an approximate number of the several varieties:

American Beauty	60,000
Killarney	35,000
White Killarney	35,000
Richmond	20,000
Mrs. Jardine	15,000
Uncle John	8,000
My Maryland	5,000

The carnations are in a range by themselves at some little distance from the rose houses, and the plants show that care and culture which is so plainly seen in everything growing in the houses. This year many of the plants have been grown in the houses throughout the summer and they are planted beside others of the same variety that were grown in the field. At present the indoor culture is way ahead of the field-grown stock. The plants are nearly as large as those that were grown outside, with many blooming shoots and producing flowers as grand as are cut after the turn of the year. The comparison of inside and field-grown stock is being tried on a large scale and should show conclusively whether the outside or inside-grown stock is the better. Washington is being given a good trial and is planted in benches beside the old standby, Mrs. T. W. Lawson, and if it can continue to outshine the older variety as it is doing at present, the old favorite will have to pass on and relinquish its place at the head of the dark pink. Victory is the variety depended upon for scarlet, and as grown here will be hard to replace, but Bonfire is being given a trial, yet has not shown that it will be able to relegate Victory among the "has-beens." White Perfection and White Lawson are depended upon to furnish the large quantity of white and Winsor is grown in quantities for pink. Enchantress, of course, is the light pink and is in fine health, producing flowers that are unsurpassed. The varieties are grown in the following numbers:

Mrs. T. W. Lawson	20,000
Winsor	20,000
Enchantress	25,000
Victory	30,000
White Perfection	25,000
White Lawson	25,000
White Enchantress	10,000
Washington	5,000

AMERICAN BEAUTY ROSES AT WIETOR BROS., CHICAGO.

The chrysanthemums are just beginning to bloom and a bench of Roserie and October Frost nearly ready to be cut are good samples of what will follow when the mid-season varieties are in their prime. Something over 50,000 plants are grown and they are all in the finest condition to produce a high-grade commercial bloom. All the best commercial sorts are grown and quantities of the following varieties were to be seen in excellent condition: In whites there were, beside October Frost, Early Snow, White Bonnaffon, Estelle, Snow Queen, Timothy Eaton, Miss

MRS. JARDINE ROSES AT WIETOR BROS., CHICAGO.

Clay Frick, W. H. Chadwick and Linwood Hall. In yellows, Robert Halliday, Monrovia, Major Bonnaffon, Golden Beauty and Golden Chadwick. In pink, Roserie, Glory of the Pacific, Dr. Enguehard, Gloria and Pink Ivory, and in reds, Intensity and Black Hawk. A large assortment of pompons for cutting in sprays are also grown, which include, besides Baby and Baby Margaret, the choicest varieties of these small flowers so necessary to the retailer at the present time; and the cut of these promise to be large and of good quality. The total cut of chrysanthemum blooms will be about 150,000 and 30,000 sprays of pompons.

The firm of Wietor Bros. has reason to feel justly proud of the crops as they now are at the houses, and also the quality of the stock which is now being cut and marketed at their store at 30 E. Randolph street, where N. J. Wietor, assisted by his able store-man, C. A. Alles, so faithfully guard their customers' interests. The greenhouses are just as ably managed by Henry Wietor, who has an able grower in the foreman, James Novak, to whom we are greatly in debt for the courtesies extended in escorting us around this large establishment, and the splendid stock seen is a fitting testimonial of his ability as well as the care and attention bestowed upon it.

Illinois State Fair.

The following premiums were awarded at the Illinois State Fair at Springfield, September 29-October 7, in addition to the list appearing in the AMERICAN FLORIST, issue of October 7, page 573:

ROSES.

American Beauty.—Poehlmann Bros. Co., Chicago., first; A. C. Canfield, Springfield, second; A. C. Brown, Springfield, third.

Richmond.—Poehlmann Bros. Co., first; A. C. Canfield, second; A. T. Hey Floral Co., Maywood, third.

American Beauty, 50 flowers.—Poehlmann Bros. Co., first; Janssen Seed & Floral Co., Springfield, second.

Richmond, 50 flowers.—Poehlmann Bros. Co., first; Janssen Seed & Floral Co., second; A. T. Hey Floral Co., third.

Golden Gate or its sports, 50 flowers.—Janssen Seed & Floral Co., first.

Madame Chatenay, 50 flowers.—Janssen Seed & Floral Co., first.

Bride, 50 flowers.—A. T. Hey Floral So., first; Janssen Seed & Floral Co., second.

Bridesmaid, pink, 50 flowers.—Janssen Seed & Floral Co., first; A. T. Hey Floral Co., second.

Killarney, pink, 50 flowers.—Poehlmann Bros. Co., first; A. T. Hey Floral Co., second; Janssen Seed & Floral Co., third.

Any other variety, 50 flowers.—Poehlmann Bros. Co., first; Janssen Seed & Floral Co., second.

Kaiserin Augusta Victoria, white, 50 flowers.—A. T. Hey Floral Co., first; Janssen Seed & Floral Co., second.

My Maryland, 50 flowers.—Poehlmann Bros. Co., first; A. T. Hey Floral Co., second; Janssen Seed & Floral Co., third.

Mrs. Mrashall Field, 50 flowers.—Janssen Seed & Floral Co., first.

Killarney, white, 50 flowers.—Poehlmann Bros. Co., first; A. T. Hey Floral Co., second; Janssen Seed & Floral Co., third.

FLORAL DECORATIONS.

Standing Cross, four feet from bottom of base up.—Cottage Greenhouses, Litchfield, first; A. T. Hey Floral Co., second; Schiller the Florist, Chicago, third; Wirth & Gaupp, Springfield, fourth.

Wreath flowers on easel, 24-inch.—Geo. A. Kuhl, Pekin, first; Hans Schmalzl, Lincoln, second; Schiller the Florist, third; Janssen Seed & Floral Co., fourth.

Best floral arrangement, set piece.—Geo. A. Kuhl, first; Schiller, the Florist, second; Janssen Seed & Floral Co., third; A. T. Hey Floral Co., fourth.

CUT FLOWERS, BOUQUETS, ETC.

Amateurs only.

Collection phlox, herbaceous.—Alice L. Clark, Springfield, first; Ruby Walker, Springfield, second; Mrs. L. C. Farmn, Pawnee, third.

Collection roses, 12 flowers, outdoor grown.—Mrs. G. W. Miller, Springfield, first; Ruby Walker, second; Lucia M. Lightfoot, Springfield, third.

ROSES.

Any other variety, 25 flowers.—Poehlmann Bros. Co., first; A. C. Canfield, second; A. C. Brown, third.

My Maryland, 25 flowers.—Poehlman Bros. Co., first; Janssen Seed & Floral Co., second; A. C. Canfield, third.

American Beauty, 12 flowers.—Poehlmann Bros. Co., first; A. C. Canfield, second; Janssen Seed & Floral Co., third.

Richmond, 12 flowers.—Poehlmann Bros. Co., first; A. T. Hey Floral Co., second; A. C. Canfield, third.

Perle, yellow, 12 flowers.—Poehlmann Bros. Co., first; A. C. Canfield, second; Janssen Seed & Floral Co., third.

Mrs. Jardine, 12 flowers.—A. C. Canfield, first; Janssen Seed & Floral Co., second.

Bride, 12 flowers.—A. T. Hey Floral Co., first; A. C. Canfield, second; Janssen Seed & Floral Co., third.

Bridesmaid, 12 flowers.—A. C. Brown, first; A. C. Canfield, second; Janssen Seed & Floral Co., third.

Killarney, pink, 12 flowers.—Poehlmann Bros. Co., first; A. C. Canfield, second; Janssen Seed & Floral Co., third.

WHITE PERFECTION CARNATIONS AT WIETOR BRO CHICAGO.

Killarney, white, 12 flowers.—Poehlmann Bros. Co., first; A. C. Canfield, second; Janssen Seed & Floral Co., third.

Any other variety, 12 flowers.—Poehlmann Bros. Co., first; J. F. Ammann Co., Edwardsville, second; A. C. Canfield, third.

My Maryland, 12 flowers.—Poehlmann Bros. Co., first; A. C. Canfield, second; A. T. Hey Floral Co., third.

Best six varieties, 25 blooms each, American Beauty excepted.—A. T. Hey Floral Co., first; A. C. Canfield, second; A. C. Brown, third.

New York Florists' Club.

A very enthusiastic meeting of the Florists' Club was held Monday, October 9, with one hundred present, without question one of the most interesting in the history of the club. Patrick O'Mara's cheering presence had much to do with it. He certainly was given the "glad hand" by everyone. Emil Schloss, W. E. Cook and E. E. Bates were elected to membership. The resignations of M. C. Wright and W. F. Shea were accepted with regrets.

The outing committee, through Joseph Fenrich, made a detailed report, showing a small deficit, and the same was ordered paid from the funds of the club and the committee discharged with thanks. The essay committee announced that J. Otto Thilow, of Philadelphia, Pa., would deliver an illustrated lecture at the November meeting on his travels in the west. This will also be ladies' night. There will be no essay at the December meeting, as it will be election night, and at the January meeting R. Vincent, Jr., president-elect of the S. A. F., will deliver an illustrated lecture on his "Experiences in Dixie."

The secretary read a letter from President George Asmus of the S. A. F., stating that he had appointed the following National Flower Show committee: Chas. H. Totty, chairman; W. A. Manda, Thomas Roland, W. N. Rudd, W. P. Craig, J. A. Valentine. The president of the club appointed J. A. Shaw, A. L. Miller and Jos. A. Manda a committee to draw up suitable resolutions on the death of our late fellow member, I. L. Powell, who died on September 21.

The committee on awards made the following report: From Chas. H. Totty, Madison, N. J., a vase of Sunburst roses, scored 89 points. This vase will be distributed jointly by E. G. Hill Co., Richmond, Ind., and Chas. H. Totty, Madison, N. J. From W. A. Manda, South Orange, N. J., collection of seedling dahlias, Nos. 13-14-4, being entitled to special mention. The exhibit as a whole being entitled to a vote of thanks. From Chas. Lenker, Freeport, L. I., vase Ernest Glasser, vote of thanks. From Henry F. Michell, Philadelphia, a vase Buddleya spectaculum magnifica, vote of thanks. Collection of dahlias, some of them showing wonderful variety and merit, vote of thanks. From Wm. Tricker, Arlington, N. J., collection of roses; thanks.

Upon the motion of Secretary John Young, an appropriation of fifty dollars was made to the bowling club.

J. K. L. M. Farquhar, who early in the evening had been met by a committee at the train, was tendered a dinner at Cavanaugh's in Twenty-third street, the following being present: President Nugent, Vice-President Harry A. Bunyard, Secretary Young, Treasurer Rickards, F. R. Pierson, C. H. Totty, W. J. Stewart, W. F. Sheridan, Frank H. Traendly, A. L. Miller and Chas. Schenck. Mr. Farquhar's talk was on the "Horticultural Outlook" and was most interesting.

Charles Schenck gave a pleasing talk on his travels in Europe, which showed he had been a close observer, and, as one member expressed it, Mr. Schenck was a "32-degree orator" and his talk was most instructive. And then came our P. O'Mara, with a delightful talk of his trip abroad. The hour was late, and Mr. O'Mara curtailed his remarks, but the members were delighted with the account of his travels. There is no question but what Mr. O'Mara will entertain us again on the same subject. All these gentlemen received a standing vote of thanks. Coupled with the motion on Mr. O'Mara's talk was a vote of welcome, midst great enthusiasm.

Samples of carnation staples for mending split carnations were exhibited by I. L. Pillsbury, Galesburg, Ill.

Philadelphia.

DAHLIAS STILL PLENTIFUL.

There is an abundance of flowers now in the market, roses and carnations leading and piling up in the cooling rooms. Dahlias have been plentiful, although several cool nights that suggested frost shortened the supply. Better and more business-like methods in the handling of this flower from the grower to the dealer has resulted in widening the market, as shipments are made with very little loss and the store men are encouraged to carry stock, the display of which insures larger sales. It is the same with all classes of flowers, the fresher and more saleable the larger the sale. This is so well known that to some it seems needless to repeat it; but if the growers, at least a great majority of them, would devote a little more time and attention to the proper cutting and packing of stock, the time of its arrival on the market, they would find a five to ten per cent gain in the returns. Roses are improving; there is more length to the stem and the buds are larger. American Beauties are now to be had all day long, not just early in the morning; prices are about the same as last week, but the flowers better. White Killarney is edging up in the race and another couple of weeks will see that this white will lead the race in its class. Chrysanthemums are seen in several colors, with larger flowers. Golden Glow has sold very well the past three weeks, but must now give way to Monrovia, which is so much better. Very good blooms of Polly Rose and Early Snow are seen in the windows. Cosmos can be had by the wagon load and is popular with the multitude, who have quarters instead of dollars to spend. Violets are in demand, singles mostly, with a few doubles. Lily of the valley appears to be about as wanted, cattleyas are rather plentiful and require a little pushing. Snapdragon will be much in evidence the coming season, judging by the good stock now coming in, which is fine, but not as yet with long stems.

NOTES.

The social features of the club will be kept up and brought more often to the front than before, and without the silver-tongued oratory of Robert Craig. Such affairs as the recent anniversary dinner, which was a delight to all participants, should occur at least annually and would be a big factor in increasing the interest in and membership of the club. A larger attendance means more to the business of the organization and we believe that the year just opening under the leadership of J. Otto Thilow will be one of the best of the twenty-six.

So George C. doesn't approve of the trade breaking into society, and he is opposed to any more of such social events. The trouble was George did not have his best girl along. George's philosophy is of one kind and that rather narrow, while John Westcott's is whole-souled and wide enough for everybody. He says that the old adage, "All work and no play makes Jack a dull boy," is his doctrine and he has always found it to work out for the best.

Laurence K. Peacock, the dahlia specialist, of Berlin, N. J., says this is the best season he has ever had. He could have sold many more blooms of their new pink Dorothy Peacock and many other varieties were almost as popular. He says they now understand the wants of the trade much better and with their system of cutting and packing are getting very satisfactory results.

K.

AZALEAS have arrived in good condition, but none of the Belgian growers seem to be able to make full deliveries of those special named varieties most popular among the florists, either in names or in sizes needed. Not satisfied with changing orders from one variety to another, they now also substitute in sizes.

National Flower Show.

President Asmus announces the appointment of the following as members of the National Flower Show committee: Charles H. Totly, Madison, N. J., chairman; W. A. Manda, South Orange, N. J.; W. N. Rudd, Chicago; Thomas Roland, Nahant, Mass.; W. P. Craig, Philadelphia, Pa.; and J. A. Valentine, Denver, Colo.

Society of American Florists.

DEPARTMENT OF REGISTRATION.

Public notice is hereby given that Henry A. Dreer, Inc., of Philadelphia, Pa., offer for registration the Althea and S. J. Reuter & Son, Inc., of Westerly, R. I., the rose described below. Any person objecting to the registration or to the use of the proposed names, is requested to communicate with the secretary at once. Failing to receive objection to the registration the same will be made three weeks from this date.

DESCRIPTIONS.

Althea, Wm. R. Smith—A new single white variety, an improvement on Althea Totus Albus with flowers nearly double the size of this last named sort. It is a seedling raised by John Clark, assistant superintendent of the United States Botanic Gardens at Washington, D. C., and offered for registration by Henry A. Dreer, Inc., of Philadelphia, Pa.

Rose Double Improved White Killarney—A pure white sport from the Waban strain of White Killarney. Much larger bud, double the size of the ordinary White Killarney. Stronger and more vigorous growth making a large plant with heavy deep colored foliage. An excellent summer white, also having the necessary body with good keeping qualities and pure white color. Being an improvement over the ordinary White Killarney in growth, vigor and size, it is the ideal white for winter. Offered for registration by S. J. Reuter & Son, Inc., of Westerly, R. I.

H. B. DORNER, Sec'y.

The Management of Flower Shows.

All the necessary details connected with the fall flower shows should be perfected at once, for there are always small matters that have been overlooked that will need considerable attention, and the more completely all matters are arranged the smoother everything will go. The daily papers in many cities are already giving extended notices of the intended special features, and this should be carefully attended to and frequent notices of the many promised exhibits of note kept before the attention of the public until the show commences. When the doors are thrown open to the public, be sure that the reporters assigned to cover the show are fully informed, and have someone in authority point out the prominent features and the meritorious exhibits. Do not leave them to hunt up some forward individual, who will extol his own product to the exclusion of everything else in the exhibition. A competent committee should be appointed who will properly stage any and all exhibits that are forwarded by express, the owner not being able to attend the show. See that all such exhibits are placed on the table in the best possible shape. After the judges have performed their duties, the clerical force should immediately have the list of premiums copied, typewritten if possible, not only for the daily press but for all papers. This should have what the prizes were offered for and to whom awarded. It is too much to expect that the reporter is going to hunt the exhitibition all over for a complete list of prizes awarded, or in the hurry, which is often required, copy the list from the schedules, as is necessary where only the class number is given in the list of awards. These are all important matters in the conducting of a successful exhibition.

Broken Peony Roots.

ED. AMERICAN FLORIST:

I have read and enjoyed your paper for several years, and very seldom see a mistake, but in an article on peonies in the issue of September 16, it is stated that pieces of peony roots left in the ground may grow and cause a confusion of varieties later. The roots of the peony, like those of the rhubarb and other like plants never grow unless an eye or bud is left on the end of the root at the crown of the plant, consequently we divide the crowns of these plants to increase them, instead of growing them from root cuttings.

Illinois. F. A.

The propagation of the peony is invariably performed by dividing the crowns, and in order to obtain strong plants, three eyes are generally left at the crown of each division. But as to what "F. A." writes in regard to pieces of the root not making eyes and growing, we have had experience to the contrary. A bed of Officinalis rubra was transplanted and in the lifting, pieces of the tubers became broken off and were left in the ground. Two years later some of these broken tubers sent up shoots and these were lifted and became plants. Bailey's Cyclopedia of Horticulture under the propagation of peonies states: "In digging, care should be taken that all of the tubers are dug up, for if not they may remain dormant a season and then produce a shoot, giving rise to many stray plants which are frequently found in old beds. Tubers divided without an eye should also be planted, as they often act in a similar manner and make a showing above ground in two years' time. W.

Coming Exhibitions.

(Secretaries are requested to supply any omissions from this list and to correct any dates that may have been altered since the last advices.)

Chicago, March 11-17, 1912.—Spring show, Horticultural Society of Chicago, Art Institute. James H. Burdett, secretary, 1620 West 104th place, Chicago.

Cincinnati, O., November 13-18, 1911.—Fall exhibition, Cincinnati Florists' Society, Horticultural Hall-Music Hall. George S. Bartlett, secretary, 131 East Third street, Cincinnati.

Hartford, Conn., November 8-9, 1911.—Chrysanthemum show, Connecticut Horticultural Society, Putnam Phalanx Armory. Geo. W. Smith, secretary, Melrose, Conn.

Lenox, Mass., October 25-26, 1911.—Grand fall exhibition, Lenox Horticultural Society, Town Hall. Geo. H. Instone, secretary, Lenox.

Madison, N. J., October 26-27, 1911.—Sixteenth annual flower show, Morris County Gardeners' and Florists' Society, James' building. Edw. Reagan, Morristown, N. J., secretary.

Milwaukee, Wis., November 13-19, 1911.—Fall Flower Show, Milwaukee Florists' Club, Auditorium. Gustave C. Mueller, secretary, 926 Ninth street, Milwaukee.

New York, November 3-7, 1911.—Fall exhibition, Horticultural Society of New York, American Museum of Natural History, Central Park West and Seventy-seventh street. Geo. V. Nash, secretary, New York Botanical Garden, Bronx Park, New York.

New York, November 1-3, 1911.—Chrysanthemum Show, American Institute of the City of New York, 19-21 West Forty-fourth street. Wm. A. Eagleson, secretary.

New York, November 3-12, 1911.—American Land and Irrigation Exposition, Madison Square Garden. Gilbert McClurg, general manager, Singer building, New York.

St. Louis, Mo., November 7-11, 1911.—Fifth fall floral exhibition and pomological display, St. Louis Horticultural Society, Coliseum, Jefferson and Washington avenues. Otto G. Koenig, secretary, 6473 Florissant avenue, St. Louis.

St. Louis, Mo., November 7-11, 1911.—Annual exhibition Chrysanthemum Society of America, in connection with the St. Louis Horticultural Society.

Stamford, Conn., November 3-4, 1911.—First annual exhibition, Westchester and Fairfield Horticultural Society, Casino. J. B. McArdle, secretary, Merritt building, Greenwich.

Tarrytown, N. Y., October 31-November 2, 1911.—Thirteenth annual exhibition, Tarrytown Horticultural Society, Music hall. E. W. Neubrand, secretary, Tarrytown, N. Y.

Worcester, Mass., November 9, 1911.—Chrysanthemum exhibition, Worcester County Horticultural Society, Horticultural hall, 18 Front street. Leonard C. Midgley, secretary, Worcester, Mass.

Meetings Next Week.

Boston, Mass., October 17.—Gardeners' and Florists' Club of Boston, Horticultural Hall.

Chicago.

A VARIABLE MARKET.

According to the weather bureau the climate of the city for the month of September was the worst experienced for some years. The month was the rainiest in the last fifteen years, for it rained on twenty of the thirty days in the month, and the sun was visible only on fifteen days. Beside this, the highest winds ever known to average through September swept this section with an average velocity of 11.5 miles an hour. October has opened a little better, but the weather yet is cloudy and unsettled and this has had considerable effect upon the stock. While the quality has held up in splendid shape, yet the cut has diminished materially, and on occasions there has been none too many roses of certain kinds to meet the demand. The market during the last week has varied greatly; on some days the stock has cleaned up well, while on others there was plenty to meet all the requests, and of some stock more than was in demand. Roses are in good supply and have a good call. The quality of all varieties is good and with the exception of American Beauties there are sufficient of all grades both long and short. American Beauties, however, sell up very clean and there is only a limited quantity of the shorter grades. Carnations have been very plentiful, the receipts being very large and most of the stock is of fine quality. There is still a considerable number short-stemmed flowers seen on the market. White is just now in great supply, really a little more than there is call for. Chrysanthemums are becoming more plentiful and the early mid-season varieties have made their appearance, Monrovia, Robert Halliday, Pacific Supreme, Roserie and Gloria are added to the varieties already on the market. Lilies are in good supply and of first class quality and excellent lily of the valley is to be had. Orchids are to be seen at all the retail stores, and are freely offered by the wholesalers handling them. Cattleyas, oncidiums, dendrobiums and vandas furnish a great variety. Violets are improving rapidly and some very nice flowers are offered. Bouvardia is becoming more plentiful and a few gardenias are to be had. The outside stock is rapidly getting past, dahlias and tritomas being the principal flowers of this class now on sale.

NOTES.

The jolly bunch of St. Louis boys who came to this city to attend the twenty-fifth anniversary of the Florists' Club, came near being ejected and not reaching their destination. They had a special car and, bent on enjoying themselves, started to sing. George H. Angermueller attempted "Sweet Adeline" and a passenger who had in some manner gained admittance to the special seriously objected to the sweet (?) strains, and called upon the conductor to put a stop to the noise. The conductor immediately became authoritative and threatened to put the whole bunch off at Taylorville, but Frank X. Gorly stepped into the breach and politely told the conductor what his business was and the matter quieted down with the ejectment of the obsteperous passenger to the place where he belonged.

J. W. Fink gives this reason for not attending the celebration of the twenty-fifth anniversary of the Florists' Club, a bouncing baby girl arrived in the morning of October 5. His brother Michael is about as happy as he is, for he takes great pleasure in telling his friends that he is now the proud uncle of 28 children.

Sam Slack, who recently accepted a position as section foreman at the Geo. Wittbold Co.'s greenhouses at Edgebrook, has purchased the restaurant formerly conducted by this firm and with the assistance of his wife will have charge in the future. Any one who happens to be hungry while in this vicinity will fare well to patronize Slack's restaurant, for the proprietor's wife has a reputation for being a cook of great ability.

The magnificent silver cup that the Milwaukee Florists' Club presented to the local florists' club at the banquet on its twenty-fifth anniversary, October 5, is being greatly admired by the members of the trade, at the Chicago Carnation Co.'s store, where it is on exhibition this week.

The Des Plaines Violet Co. has commenced cutting a good grade of Marie Louise violets and is making regular shipments to the J. B. Deamud Co.'s store.

H. E. Philpott left on October 7 for his home in Winnipeg, Can., after presiding at one of the most successful meetings ever held by the local florists' club.

Gustav C. Mueller, with Mueller & Schroeder Co., returned to his home in Milwaukee on October 8, after enjoying a few days' visit in this city.

Irving Dunford of North Olmsted, O., has placed an order with the Geo. M. Garland Co. for another iron frame greenhouse, 28x100 feet.

B. J. Maynard, traveling representative for the Geo. M. Garland Co., is back from a successful business trip to the east.

L. Hoeckner has taken possession of the store which he recently bought from F. C. Struvy, at 1515 Clybourn avenue.

Ed. Armstrong, of the A. Lange force, was quietly married at St. Joseph, Mich., last week.

The lily of the valley that H. N. Bruns is cutting is of the prize-winning quality.

Frank Venneman, of Kirkwood, Mo., was a most welcome visitor this week.

Here's Where You Can Get

THE BEST KILLARNEYS

Both White and Pink

Large, magnificent blooms on all lengths of stems, with luxuriant foliage. **Positively the Best.** None as good in the market. Unusually large crops enable us to supply you all.

BEAUTIES

Richmond, Mrs. Jardine and Uncle John

Are also in good crop and of the same quality as the Killarneys. The stems are good, the substance is fine, and the blooms of the finest possible colors and of unsurpassed quality.

VAUGHAN & SPERRY

Long Distance Phone Central 2751. **161 N. Wabash Ave., CHICAGO.**

M. S. Crozer, Cedar Rapids, Ia., was in the city this week buying an ice-box and other fixtures for his new store, which he will open in the Nation Bank Building in that city in the very near future. Mr. Crozer jokingly told us how his splendidly decorated auto took fifth prize in an automobile parade in his city and how the four others which were decorated with artificial flowers carried off the first honors. The judges, who could not tell the difference from the natural and artificial flowers, thought they were giving the contestants a square deal, but Mr. Crozer thought his prize, a $5.00 bill, looked pretty small, for it hardly paid the express charges on the flowers he used in the decoration.

Poehlmann Bros. Co. is now receiving a prize winning stock of roses and carnations at the store, as was evidenced by the clean sweep that was scored at the Illinois State Fair at Springfield last week. Some beautiful specimens of the new roses being tried at this great establishment were seen at the store this week. The three new yellows, Mrs. Aaron Ward, Lady Hillingdon and Melody were seen in fine shape. Dark Pink Killarney is a very fine shade and Double Pink Killarney a good large flower. Radiance, Rose Queen and Prince de Bulgarie are all beautiful additions to the list of roses and showed up well.

J. F. Kidwell, who runs a dairy in connection with his greenhouses on Wellworth farm, bought some more cows this week and now has a herd of 45 on his premises. If the milk, cream and butter is of the same quality as the Killarney roses that he is now cutting he can rest assured that he will not receive any complaints from his customers.

Vaughan & Sperry are showing a large quantity of extra fancy American Beauty roses that are about as near perfect as this popular flower can be grown. The chrysanthemums that they are receiving are also of good quality and some large white and yellow showy blooms can be seen at their store this week.

W. W. Randall is back from a very successful business trip through the state of Michigan. Frank Johnson, the hustling sales manager, is showing the A. L. Randall Co.'s customers something new and very fine in the line of prepared-non-inflammable oak branches, for which his firm is the exclusive selling agent.

P. M. Bryant, with E. H. Hunt, says the demand for the Fisher Carnation Clip is very good and that his firm is filling a large number of orders. C. M. Dickenson and Clifford Pruner are a little bit under the weather, the former being confined to his home this week.

The Geo. M. Garland Co. is meeting with much success with the sale of the Garland handy truck that they have recently placed on the market, and say that out of the large number that has been sent out on 30 days' trial, only one has been returned.

The Chicago Flower Growers' Association is enjoying a very good business, the out-of-town trade being all that could be desired. The stock in general is arriving in good condition, with Killarney and White Killarney roses of prize winning quality.

"You can get fine roses at Zech & Mann's," is what a party told the writer when speaking of the stock on the local market. It might be added here that the lilies are also fine, for the stock seen at this store this week is of the first quality.

E. F. Winterson's new residence is making slow progress on account of labor union troubles. Mrs. Winterson's many friends will regret to learn that she has been somewhat under the weather of late.

N. J. Wietor, the well known wholesaler, will celebrate his thirty-ninth birthday on Tuesday, October 24. His son Lee celebrated his thirteenth birthday last Sunday, October 8.

Mrs. A. Sigmund has returned from a most enjoyable visit at Fox Lake and is again assisting Peter Sgoros, the Chicago Florist, with the splendid trade that he enjoys.

The stock of roses and carnations that Hoerber Bros is supplying their many customers is of the first quality, with the result that they are sold as soon as they reach the store.

J. C. Craig only got as far as Hillside on his intended trip to the Pacific coast. Rush of business is the reason given for his staying at home.

D. E. Freres is supplying his customers with a fancy grade of carnations and roses, especially Killarney, White Killarney and Mrs. Jardine.

N. P. Miller says trade at Kennicott Bros. Co.'s store was very brisk on October 9, the demand for cut flowers in all lines being very good.

J. Jehlik, brother of Emil Jehlik, recently purchased the store formerly owned by B. Zima, 3059 West Twenty-second street.

Adgate & Son, Warren, O., have placed an order for a new ice-box with Buchbinder Bros., 518 Milwaukee avenue.

Henry Weis, of the J. A. Budlong force, and wife have returned from their honeymoon at Waukesha, Wis.

George Perdikas' store on South Wabash avenue presents a most pleasing appearance in its new coat of paint.

Miss M. C. Gunterberg is now receiving regular shipments of violets from her eastern growers.

August Lange had a lot of fine baskets, etc., for the Majestic theater talent October 9.

POEHLMANN'S FANCY VALLEY
EXTRA FINE HARRISII LILIES
} **We make these a specialty. Can supply them all the Year. Once tried you will have no other**

Otto Wittbold, the enterprising superintendent at the Geo. Wittbold Co.'s greenhouses at Edgebrook, is building a 15-room lodging house, in addition to the one now occupied, for the men employed on the premises. If he keeps on progressing as he has since he has been in charge, he will have a little village all by himself, which will probably be called Wittboldville. The stock in the greenhouses (at Wittboldville) is in fine condition and the carnation and chrysanthemum crops are just commencing to bloom, some exceptionally large Pacific Supreme, Virginia Poehlmann and Golden Glow blooms being noticed. The supply of decorative plants is large and in good condition and is a fitting testimonial for the high grade stock grown at this establishment.

Frank Church, a well known figure in the local market, was found dead in the rear of the Savoy hotel Monday morning, October 9, with a deep gash over the eye. He was born in Covington, Ky., and was 49 years old. Coming to this city in 1887 from Cincinnati, where he claimed to have opened the first wholesale flower house in that city, he entered the employ of J. C. Craig, then located at 66 Washington street, and later worked for M. F. Gallagher. In later years he was employed by Reinberg Bros. and other firms. Efforts are being made to find his relatives to take charge of the body.

Philip L. McKee has returned from a trip in Wisconsin, where he had been in the interests of his firm, the John C. Moninger Co. Mr. McKee, who had occasion to visit the country around Black River Falls, which was recently swept by a flood from a bursting dam, says that the damage was very large, and that many of the agricultural farms in that section are completely covered with sand, in some places eight to ten inches deep.

F. F. Benthey, one of the popular veterans of the trade and who looks after the customer's interests at Kyle & Foerster's store, is receiving congratulations from his many friends for the splendid manner in which he officiated as toastmaster at the Florists' Club banquet on October 5.

Wm. Wolf has returned from Toledo, O., where he acted as best man at a friend's wedding, which occurred last week. It is rumored that he will follow his friend's example and join the ranks of the Benedicts in the very near future. A pleasant journey, William.

A. Vanderpoel, of the Douglas Boulevard Floral Co., one of the eight union florists of this city, is proud of the little union button that he wears in his coat and which is so prominently displayed to all in the trade.

John Michelsen, the efficient manager at the E. C. Amling Co.'s store, says that the trade on Monday was the liveliest it has been for some time past and that the sales exceeded those of the same date last year.

Wm. Gray, formerly with R. A. Latham, Minneapolis, Minn., is now in the employ of Canger & Gormley, the well-known North State street florists.

Trade at the T. F. Keenan store on East Sixty-third street has picked up considerably the past week and promises to continue in a like manner.

Vaughan's Seed Store is turning out big lots of azaleas this week as well as first early shipments of Lilium Giganteum and Gladiolus Colvillei.

Geo. Manos is shipping a large quantity of stock from the local market to his store in Pittsburg, where trade is very good at present.

The regular quarterly meeting of the Horticultural Society will be held at the Art Institute Friday, October 13, at 4 p. m.

Weiland & Reich are cutting a choice grade of roses, especially Killarney, the firm's favorite flower.

Mrs. Wm. H. Gast has enjoyed a very prosperous season at her store on Linden place.

DETROIT, MICH.—J. F. Sullivan is visiting New York and Philadelphia, looking over the holiday offerings. Announcements are out for the wedding of Miss Helena Sullivan, daughter of Mr. and Mrs. J. F. Sullivan, and W. J. Mahon, of Cleveland, O., October 25.

Just Because We Grow The

The Best Roses in Ohio

Is No Reason You Should Buy From the Other Fellow

J. M. GASSER CO., CLEVELAND, O.

Milwaukee.

NOTES.

Nic. Zweifel still takes great pleasure in telling his many friends about his recent visit to the golden west and Alaska. The popular grower, who is a native of Switzerland, says that when he climbed the mountains in the state of Washington it seemed as if he was suddenly transferred from his greenhouses and his favorite carnation, Bright Spot, to his former home near the Alps.

The Holton & Hunkel Co. is filling a large number of orders for a choice grade of plants, especially kentias and araucarias. The stock, on the whole, is in very good condition, the plants being well grown, healthy, clean and of unusually good quality.

Gustav C. Mueller returned on October 8 from a few days' visit in Chicago. He visited the Des Plaines Floral Co.'s and Hoerber Bros.' greenhouses at Des Plaines and the Geo. Wittbold Co.'s greenhouses and nursery at Edgebrook.

The C. C. Pollworth Co. is cutting a large supply of stock of all kinds, especially roses and carnations. The supply department is very busy filling fall orders for cut-flower boxes, of which this enterprising firm makes a specialty.

Gust. Rusch, of Gust. Rusch & Co., is very well satisfied with the support the local trade has given him since he entered into business and feels satisfied that it will continue so.

The local delegation that attended the celebration at Chicago on October 5, returned home well satisfied with the splendid time they had enjoyed.

G. H. Hunkel of G. H. Hunkel & Co., the well-known seedsman, looks for business to pick up considerably as soon as we have a killing frost.

Richard Lietz is doing a very good business at his store on Fond du Lac avenue, where trade in all lines is very brisk.

Wm. C. Zimmerman is enjoying his usual good business, with the outlook very bright for a brisk fall trade.

Now, for a record breaking Flower Show. Everybody! Altogether!

The Kellner Florist Co. is busy with fall decorations this month.

Oh, you Roy! Oh, you banquet!

Chicago Bowling.

The Florists' Club bowling league opened its season on October 4, at Bensinger's new alleys, 29 West Randolph street, when the Orchids won three games from the Violets and the Roses won two games and lost one to the Carnations. Al Fischer made the highest score of the evening, bowling 207 in the last game played.

Individual and team scores for games played October 4:

Peter Reinberg,

30 E. Randolph St., CHICAGO.

Pittsburg.

CARNATIONS QUITE SHORT OF DEMAND.

The cloudy weather has caused quite a scarcity of stock, which is especially noticeable with carnations, as the demand for these is very large and they are the only thing to take the place of asters and dahlias. Lilies, even green buds, clean up on sight. All of the early chrysanthemums sell well.

NOTES.

It was dahlia night at the last meeting of the Florists' Club and some very fine specimen blooms were sent in. R. Vincent Jr. & Sons Co. sent singles, cactus and pompons. Chas. H. Totty sent in some of his new white carnation, Wodenethe. They had exceptionally long stems for this time of the year. A committee composed of Wm. Faulkner and P. S. Randolphs voted it a certificate of merit. He also showed the new rose, Sunburst, and every one thought it the best rose that had been sent to the club in years. Neil McCallum, of West End Park, who can always be counted upon to bring a novelty, had some hardy flowers. Phipps conservatories, Schenley park, showed Celosia, Pride of Castle Gould and also dahlias.

Headquarters for ORCHIDS and Fancy Stock

CHAS. W. McKELLAR,

162 N. Wabash Avenue, CHICAGO.

Mention the American Florist when writing.

In one corner of A. W. Smith's front window some montbretia was to be seen. It is a pretty little flower and had a number of the florists guessing as to the correct name.

The Zieger Co. had two very good decorations in Sewickley, one of them being mostly of Mrs. Aaron Ward roses.

The Pittsburg Cut Flower Co. has recently been running a very good line of carnations in all colors.

American Beauties are being moved out in large quantities by the McCallum Co., Inc.

The McKeesport Floral Co. has been cutting a nice lot of early chrysanthemums.

A. W. Smith and W. J. Smith are back from their western trip. J.

Cedar Rapids, Ia.

J. G. Crozer, a former captain and veteran of the civil war, attended a meeting of the Loyal Legion of Honor, a society of officers who participated in the war of rebellion. Mr. Crozer, who is 72 years old, is still in good health and is planning on attending many more meetings with his old comrades, who are slowly passing away, one by one.

M. S. Crozer returned from a business trip to Chicago, where he went to purchase an ice-box and other fixtures for his new store.

J. Kramer, of I. N. Kramer & Son, is confined to his home with a severe cold. I. O. W. A.

Cincinnati.

BUSINESS GOOD.

Another of the mid-winter factors in the cut-flower line is in the market. This flower, the popular New York double violet, made its season's debut last week. Business, though slightly irregular at times, was very satisfactory. The opening of this week showed nearly everything cleaned up in less time than it takes to tell it. The one exception to this is dahlias and very few of these were left at the close of the day's business. Indications point that the balance of the week will be as good as the first. Practically all offerings are of the most satisfactory quality and include among the roses American Beauty, Mrs. Taft, White and Pink Killarney, Brides, Bridesmaid, Richmond, My Maryland and Ivory. Among the carnations all standard varieties in the local market, especially white and Enchantress, Easter lilies, chrysanthemums, cosmos, New York double violets, lily of the valley and orchids.

CLUB MEETING.

The Florists' Club held their regular monthly meeting at their club rooms. The executive committee of flower show announced that three cups had been donated for the show and are as follows: J. M. McCullough's Sons Co. for carnations, J. Chas. McCullough for roses, R. Witterstaetter for chrysanthemums. The judges for the show will be I. Berterman, Indianapolis; Otto G. Koenig, St. Louis; Philip Breitmeyer of Detroit, Wm. Sunderbruch, Jr., Joseph Beran, Emmet Suttmiller, Harry Sunderhaus, Ed. Bossmeyer and Chas. Witterstaetter were admitted to membership by acclamation. A committee consisting of Chas. H. Hoffmeister, C. E. Critchell and P. J. Olinger were appointed to report at the next meeting possible means for the entertainment of visiting florists to the flower show. Meetings will be held on Monday, October 23, at the club rooms, and Saturday, November 11, at the Cincinnati Cut Flower Exchange on the kind invitation of Alex. Ostendaps and Al. C. Heckmann, proprietors of the latter place. E. G. Hill, of Richmond, Ind., was a visitor at the meeting. He showed a large vase of his superb yellow new forcing rose Sunburst and he gave a very interesting talk on flower shows in Europe. A very gratifying part of his address, however, was his promise to come down to the fall exhibition with a sufficient exhibit to give all a good run for the prizes.

H.

Hartford, Conn.

A party of dahlia lovers left the city at 10:48 Sunday, October 1, to visit the dahlia fields of John H. Slocombe at New Haven and on arriving shortly after noon, took the trolley and rode out Chapel street, through Woodward avenue until they reached Fort Hale road at the corner of Fort Hale park. A three minutes' walk brought them to the top of the hill from which was obtained a fine view of New Haven harbor. Although strangers to this locality, it was not necessary to ask just where Mr. Slocombe lived, for directly across the road could be seen a perfect sea of dahlias. The dahlia cranks thought they had seen dahlias in abundance before, but as they got their first view of the floral beauties before them they stopped in amazement.

It would be impossible to do justice in words to the wonderful types and varieties of blossoms of various colors and sizes. One who has gazed upon a meadow fairly white with daisies can get a fairly good idea of these three acres of dahlias of Mr. Slocombe's. It was marvelous to see the plants so full of blossoms. Think of a Countess of Lonsdale plant with over 100 blossoms by actual count, and not one plant but three rows of them over 200 feet in length, and every plant seeming to be just as full as the one whose blossoms were counted. A gorgeous Mrs. Roosevelt had more than fifty blossoms, the stems averaging 12 to 15 inches in length. There were at least 300 to 400 plants of the White Swan, a perfect mass of blossoms, looking almost like a snow bank. It seemed as though every variety were trying to outdo the other in putting out blossoms, and every conceivable color was represented.

Mr. Slocombe said he had over 300 named varieties, and countless varieties not named, which he has raised from seed. Among them the noted crimson seedling of the decorative type shown at the Connecticut fair last month, and which he said he was thinking of calling Hartford. Among his seedlings of the past season are numerous varieties—peonies, decoratives, cactus, shows and singles, all of grand size and all colors.

Besides dahlias, Mr. Slocombe raises about a half acre of gladioli, mostly seedlings of his own creation, and a large field of white and pink cosmos, a strain entirely his own, and one which blossoms all through August and until frost comes. Most of the choice varieties of cosmos have to be raised in pots and taken in the greenhouse to bloom, as Jack Frost comes too early for them.

He also has five large greenhouses devoted to English violets. And, as he said: "I have not a potted plant on the place." Over three hours were spent in admiring the flowers, and the visitors would have lingered still longer had it not begun to rain quite briskly.—J. M. Adams in the Hartford Times.

TRADE NOT RUSHING.

The weather has turned some cooler, but business cannot by any means be considered as rushing. The Veiled Prophets' Ball and the other attractions through the week caused a fair demand. Violets have made their appearance, but are still very small, cooler weather will be necessary before they make a good showing. Carnations are improving in size. Quite a number of American Beauty roses are being received and they are selling fairly well.

NOTES.

Ostertag Bros. in celebrating their twenty-fifth anniversary invited their friends to view the Veiled Prophets' parade from the windows in the show and display department. The guests were furnished with all they could eat and drink, in the firm's well-known hospitable manner.

Some good colored violets of the Dorsey variety were seen at the W. C. Smith Wholesale Floral Co. last week and they found ready sale.

Max J. Rotter has a pretty store on Fourteenth street. The location is a good one and the enterprise should prove a success.

Alexander Waldbart & Sons have repainted and remodeled the front of their establishment and it makes a fine appearance.

C. Young & Sons Co. is displaying a beautiful show window with an arrangement of different varieties of bulbs.

A meeting of the Florists' Union was called by David Kreyling, the organizer, at Kissell hall, Monday, October 9.

The boys are back from Chicago and speak highly of the way in which they were entertained.

Oscar May is bringing some first-class carnations into the market. This is his first year.

Herman Ude expects a good crop of violets, but they will be later than last year.

The Paris Floral Co. is making very handsome window displays.

A SCARCITY OF STOCK.

"All things come to those who wait." We have had a rainy week, accompanied with lower temperature, and there has been snow in the western part of the state. These conditions have made a scarcity of material. Many of the roses are off-crop and carnations have not as yet begun to come in quantity. There is an abundance of lilies, and they are as fine as at any time of the year. Violets as yet are scarce, and chrysanthemums are not any too plenty, but by another week the reverse, in chrysanthemums, may have happened. It has been a satisfactory week to the growers from a price standpoint and the best one they have had for some time. Golden Glow chrysanthemums continue to be of good quality, and the same can be said of carnations.

NOTES.

A seedling cattleya raised by John McFarland, North Easton, was shown in the market. The flower was of good size and color and the marking was excellent. Mr. McFarland states it is from the same seed pod as the one for which he received a silver medal last spring. It is a cross of C. Lawrenciana, C. McFarlandi and C. Dowiana. We understand there never has been a successful cross of those varieties before, and Mr. McFarland is to be congratulated on his success. It was to be shown at the Horticultural Hall October 7 and we feel that another silver medal ought to reach North Easton, to be added to Mac's list of prizes.

A representation of Faneuil Hall in flowers was arranged for the Ancient and Honorable Artillery Company by Thos. F. Galvin and taken by them to Atlanta, Ga., and placed on the monument to confederate veterans, which was dedicated October 10. The floral piece was six feet three inches high by five and a half feet across.

W. R. Nicholson, Framingham, gave the trade quite a surprise when he was married September 30. Miss Juna G. Harrington was the happy bride and the wedding was at York Harbor, Maine. We extend congratulations to the happy pair.

Greenhouse building is still going on. The Mishawum Flower Co. of Woburn are building one house 24x100 feet. D. J. Williams, Lowell, a house 40x200 feet. Stephen Shaw, New Bedford, a house 40x85 feet.

H. M. Robinson & Co. have a good line of Mrs. Taft roses and carnations. This firm has just finished a new ice chest, which gives them considerably more storage capacity.

F. N. Sanborn, of A. T. Stearns Lumber Co., says this has been a very busy year with them and at the present time they are working to their limit.

Welch Bros. are handling some nice My Maryland roses. MAC.

STOCK IMPROVING.

October is here with all its variations, from wind and rain on Friday to beautiful days Sunday and Monday. Flowers are showing their right to be with us now and the chrysanthemums, late dahlias and gallardia are filling the gap made by the disappearance of asters, Golden Glow and many others of the out-door flowers. Violets, American Beauties and carnations are good, while all the other roses show marked improvement.

NOTES.

There was a very well attended meeting of the Florists' Club Tuesday, October 3, and considerable business of importance was transacted. The live and energetic essay committee have a debate on for the next meeting, which will be of interest to the growers and retailers. The subject will be announced later.

City Forester Filer, of the park department, has made great strides this season in the trimming of trees on our city streets and the planting of new ones. This work, together with Park Superintendent Seymour's untiring efforts, will give Buffalo one of the prettiest park and street cities in the country.

When a young man buys a fine residence and is not married it is a safe wager that something is going to happen, and it is not south of Ferry street.

Store decorations have been very plentiful this year. The largest palms and other foliage stock was handled by Reichert Bros.

Political meetings and good displays have given Chas. Netsch a lot of work lately, his decorations being very much in demand.

Anthony Fisher, of Palmer's upper store, is now at the lower store, having exchanged with Wm. H. Grever.

Chas. Sandiford, of the J. J. Albright greenhouses, is more than pleased with his stock this season.

John Kramer has opened a new place on Chippewa street, which is in a location giving promise of good trade.

Edward Stephan of Anderson's is the recipient of many congratulations. It is a girl.

Ed. Altman's alterations in the Lenox will add very much to his trade.

Will it be Councilman Shoenhut, the florist? We hope so.

W. J. Palmer is getting along fast with his new home.

South Park, under Prof. Cowell, is in fine shape now.

S. A. Anderson is running a fine Boston fern sale.

BISON.

BUSINESS GOOD.

Business continues very good, with prospects that it will continue so for some time. With the exception of dahlias and smaller varieties of chrysanthemums the wholesale market is cleared up very early. Chrysanthemums are more plentiful but in good demand. In addition to the varieties mentioned last week there are Polly Rose, Glory of Pacific, Rosiere, Omega, Carmolet, Virginia Poehlmann and a few Dr. Gerard. Prices have advanced very materially on Killarneys, Brides, Bridesmaids, Richmond and American Beauty roses. Carnations will average better prices than previously. Orchids are in short supply and selling well, cattleyas, Dendrobium formosum, oncidiums and Vanda cærulea being the varieties most in evidence. Cypripediums not moving quite as well. Violets are more plentiful and are much improved in quality. Gardenias are also improving; in fact the general condition of the market gives much pleasure to both grower and wholesaler.

NOTES.

Gunther Bros., who have been established since 1888, have completely renovated their store at 110 W. Twenty-eighth street. This firm was among the first to handle enormous quantities of violets. At that time most of the violets came from Poughkeepsie. They now handle a general line of cut flowers. For the last few years they have worked hard to increase the sale in this market of cut dahlias and have succeeded better than they anticipated. They are receiving daily large shipments of dahlias of fine quality from D. Herbert & Son, Atco, N. J.

J. K. Allen, who was the first to locate in the block where there are so many dealers at present, has made important changes in his store to enable him to handle the output of his many growers to better advantage. Mr. Allen's rule, to open at 6 a. m. daily, has been a success and it is expected that many others will follow his example in the near future.

Alfred H. Langjahr's new store at 130 W. Twenty-eighth street is now completed. No expense has been spared to make this store strictly up to date. New ice boxes have been installed and every convenience is to be found there. Mr. Langjahr has one of the most convenient locations for both grower and buyer.

Bobbink & Atkins had the order for decorating the exterior of Gimble Bros.' store on the occasion of their first anniversary. Carloads of material must have been used in the work which was well done and is a great attraction in Greeley square at present.

The store of Emil Le Moult, established in 1865 on Fourth avenue near Thirtieth street, is now closed. Mr. Le Moult was unable to secure a favorable lease and will locate elsewhere at an early date.

The Greeks selling flowers in the street are raising a fund and are getting a petition signed to forward to the mayor in their behalf, it being understood this privilege is to be revoked.

Wm. E. Marshall just returned from a business trip that took him as far west as Duluth, Minn., where he met his brother, whom he had not seen for 24 years.

The annual fall exhibition of the Horticultural Society of New York will be held at the American Museum of Natural History November 3 to 7.

Harry A. Bunyard has just returned from a stay in North Carolina, where he went for his health, and is now fully recovered.

J. McClelland, superintendent for W. Bayard Cutting at Oakdale, L. I., died Tuesday, October 3.

Frank D. Hunter, formerly of J. H. Small & Sons, has joined the staff of P. J. Smith.

P. Welch, of Boston, was a visitor on Friday, October 6.

A. L. Young is still serving on the federal grand jury.

Visitors: H. C. Sheaff, Pittsburg, Pa.; D. J. Murphy, Chicago; I. R. Shields, Dalton, Mass.

NEW HAVEN, CONN.—The "Yale Flower Shop" will be opened and run under the bureau of apportionment of the university. This means that the flowers purchased by Yale students will not be obtained from the flower stores or of their agents among the students, but under the eye of the bureau of self-help.

PROVIDENCE, R. I.—At the special meeting of the Florists' and Gardeners' Club, held September 30, to discuss plans for the coming fall show a committee consisting of William Hill, Alexander Macrae and E. A. Appleton were appointed to confer with the Horticultural Society to make satisfactory arrangements between the two organizations.

Albany, N. Y.

At the October meeting of the Albany Florists' club Louis Menard, Jr., Albany; Farnam P. Caid and James Reynolds, Troy, and Dale Carpenter, Cohoes, were elected to membership. A letter was read from William Gillett thanking the club for a floral piece sent to the funeral of his father, Isaac Gillett, a G. A. R. veteran who died in September. Following the routine programme under the head of good of the club, Charles Sanders and Fred Goldring led in some interesting reminiscences of the condition of the trade in the large cities in the country 40 years ago. The November meeting will be held on the evening of November 2. Refreshments and a social time with a small programme of entertainment will be features that ought to insure a large attendance.

R. D.

New York Bowling.

Eight members attended the election of the New York Florists' Bowling Club, October 6, the following being chosen: C. W. Scott, president; A. Kakuda, vice-president; Bert Chadwick, secretary and treasurer. Mr. Chadwick was also elected captain and given power to arrange for matches with other florists' clubs. Bowling will commence hereafter at 6:30 p. m. and cease at 10:30 p. m. on each Friday evening at Thum's alleys, Broadway and Thirty-first street. Under the new rules and with the experience of Mr. Chadwick the bowling club should be a success and be more attractive to the members of the Florists's Club than it has been in the past. Following are the scores of the evening:

Jos. Manda	153	154	145	215
Wm. C. Rickards	131	171	157	184
Al. Rickards	139	153	181	145
A. Kakuda	181	153	139	135
C. W. Scott	123	125	113	123
E. W. Holt	135	134	161	
J. B. Nugent	111	120	110	
Bert Chadwick	162	162	257	194
J. A. Shaw	153	163	139	180
John Young	154	142	126	174
A. J. Manda	58	111	95	120

LENOX, MASS.—The chrysanthemum show of the Lenox Horticultural Society will be held October 25-26. In addition to the society's prizes, Henry A. Dreer, Philadelphia, Pa., offers a silver cup for the best group of miscellaneous plants, and Eustace Jacques and President Foulsham silver cups for displays of vegetables.

Important New Sweet Peas for 1912

New Spencer,--Vermilion Brilliant.

"The Most brilliant, iridescent scarlet Spencer yet produced."

This genuine novelty, which has been much admired both at our Fordhook Farms in Pennsylvania and Floradale Farm in California, as well as in Great Britian, originated with our friend, MR. HUGH DICKSON, of Newtownards, County Down, Ireland, who wrote: "After most careful, critical comparison with every scarlet Spencer we could procure, including several new seedlings and selections not yet introduced, VERMILION BRILLIANT stood out so promi nently that we offer it with every confidence of confirmation by all Sweet Pea planters as **the most brilliant, iridescent scarlet Spencer yet produced."**

Vermilion Brilliant produces vines that are strong, short jointed and very floriferous, bearing on stout stems, twelve to fifteen inches in length, three and four artistically placed flowers. When well grown the plants are noteworthy in that, unlike all other scarlet Spencer, *the stems frequently produce* FOURS.

The flowers are of perfect form. The bold, erect standard is well waved and fluted in true Spencer style, of large size, beautifully rounded and finishing well below the keel. The wings are of the same intense pure scarlet as the standard, making a uniform self-color throughout and *absolutely sunproof* For exhibition or garden decoration we are confident that this sterling novelty will take a prominent and lasting place in the esteem of all lovers, growers and exhibitors of Sweet Peas.

In sealed packets containing twelve seeds each, **Per pkt., 15c; $1.00 per dozen pkts.; $7.00 per 100 pkts.** In lots of 500 packets or more, **$6.25 per 100 pkts.** (Cable word, VERMILION).

In sealed packets containing twenty-five seeds each, **per pkt., 25c; $2.00 per dozen pkts.; $13.75 per 100 pkts ;** In lots of 500 packets or more, **$12.50 per 100 pkts.** (Cable word, BRILLIANT.)

VERMILION BRILLIANT was awarded the Silver Cup given by the Philadelphia *North American* at the National Sweet Pea Society's Show in Philadelphia, June 29 and 30, 1911, for the best variety not yet in commerce.

Pearl-GraySpencer. PEARL-GRAY is truly a descriptive name. The nearest to this same color that has existed heretofore is the Grandiflora *Lady Nina Balfour.* It is certainly a most lovely and distinct shade that might be described as a pearl or dove-gray, suffused with light rose, showing a trifle more of the delicate rose shading in the standard. The flowers, borne in clusters of three and four, are of the largest size and uniformly of true Spencer type, being well waved in both standard and wings.

In sealed packets of same sizes and at same prices as Vermilion Brilliant.

Irish Belle, or "Dream." A superbly beautiful variety that shows quite a new shade in Sweet Peas. The coloring is uniform in both standard and wings,—a lovely rich lilac, flushed with pink, which gives a very distinct and soft tone throughout the entire flower. Of finest Spencer type, waved in both standard and wings, the flowers are of large size and well placed on long stems. Throughout the season, even during the extreme heat and drought of July, the flowers came invariably three and four to a stem. Many Sweet Pea enthusiasts pronounced this,—next to *Vermilion Brilliant*,—to be the finest novelty in our trials at FORDHOOK FARMS the past season. It was certificated by the National Sweet Pea Society of America, June 29, 1911. **In sealed packets of same sizes and at same prices as Vermilion Brilliant.**

New Sweet Pea, "Captivation Spencer."

This is a really giant-flowered Sweet Pea of true Spencer type, both standard and wings being well frilled and waved. The beautiful self-colored flowers are of a rich rosy wine-red throughout. The plant is robust and very floriferous, bearing three and four of the ex- a large flowers well placed on long strong stems.

In sealed packets of same sizes and at same prices as Vermilion Brilliant.

A DISTINCT TYPE OF SWEET PEAS FOR 1912.

The New "Duplex Spencer" Sweet Pea.

The "Best of All" Pink Sweet Peas for Bouquets.

"Duplex" This is different from former so-called double Sweet Peas. It has persisted for four years in giving a large percentage of fine double-standard flowers. They are produced on almost every plant, four bloom sprays giving two and sometimes three of the flowers double, and smaller sprays in same proportion. The twin or triple standards are well placed, so that the flowers have no appearance of coarseness. The color is a rich cream pink. When bunched it is most effective, the effectiveness being enhanced by the bright lemon keel appearing to great advantage. It is an extra strong grower and we are certain it will take rank at the very top as a market variety, besides being fit for any first-prize stand. Messrs. Lowe & Shawyer, Ltd., of Uxbridge, England, who had an advance trial, say it is "the best pink Sweet Pea we have yet grown on our place:"—*Description of* MESSRS. DOBBIE & CO.. *with whom this sterling Novelty originated.*

In sealed packets containing fifteen seeds each: **Per pkt., 15c; $1.00 per dozen pkts ; $7.00 per 100 pkts.** In lots of 500 pkts. or more, **$6.25 per 100 pkts.** (Cable word DUPLEX)

In sealed packets containing thirty seeds each: **Per pkt., 25c; $2.00 per dozen pkts.; $13.75 per 100 pkts.** In lots of 500 pkts. or more **$12.50 per 100 pkts.** (Cable word, DOUBLE.)

New Sweet Pea,--"Rainbow Spencer."

In this striking novelty we have a great advance in the striped section. The flowers are of giant proportions, generally produced three and four on a stem. They are nicely placed, with wings coming well up in front of the standard; in fact, the flower proportions are perfect. The ground color is ivory-white, flaked and lightly streaked with rose. The flowers are magnificently waved, and the variety, which originated with our friends, MESSRS. C. C. MORSE & CO., has proven thoroughly fixed both in California and in our trials at FORDHOOK. It has rightly been pronounced *"a glorious Spencer!"* In sealed packets of same sizes and at same prices as **Duplex Spencer.**

Cleveland.

BUSINESS UNUSUALLY GOOD.

Notwithstanding the heavy rains the past week, October has had an unusually good beginning, the demand for cut flowers for funerals and decorations being all that could be desired. The stock coming from the outside, such as dahlias, gladioli and asters, has suffered from the heavy rains and winds. Dahlias in particular being bruised on the plants by the high winds, are not as good as expected. On the other hand indoor stock is improving. Roses of all kinds are of excellent quality and very plentiful with the exception of Mrs. Aaron Ward, which popular rose is far short of the demand. Carnations were a little short of supply, but the quality is improving wonderfully. Lily of the valley has been a little scarce this week. Easter lilies and white and yellow chrysanthemums, October Frost and Golden Glow, had a good sale, the market cleaning up daily. Boxwood and greens are in good demand, with a good supply. Boston ferns are having an excellent run.

NOTES.

F. G. Blecher, 2656 E. Fifty-fifth street, has gone into the retail florist business for himself. He was formerly with C. M. Wagner, 1327 Euclid avenue.

A confectionery and cut flower store is to be opened on E. Ninth street near Euclid avenue by Williams & Stevens.

C. F. B.

Dayton, O.

The weather has been propitious and the trade good and the fall outlook is fine. The crops are all looking well and could hardly be improved upon; chrysanthemums in particular never looked better. There has been a wonderful crop of dahlias and the newer varieties are both attractive and profitable to the grower.

Matthews the Florist will arrange the decoration for the Knight Templar's conclave which convenes here October 10-12, and will use 100 cases of Southern smilax. This is a state convention and it is expected there will be 20,000 visiting Knights on this occasion.

The Dayton Floral Co. has just completed the erection of a two story supply department which will prove a very valuable acquisition in meeting their requirements. They have just cleared through the custom house their fall shipment of imported bulbs.

Phebus, the Westwood Floral Co., is installing a new 80 h. p. boiler, and Nickel & Bros., of Little York, are also putting in a new heating apparatus.

The Miami Floral Co. reports having enjoyed very good business. Their stock all looks well, especially the roses, which are in fine condition.

The Heiss Co. has added a very attractive new store front which is a great improvement.

W. W. Horlacher has arranged some splendid wedding decorations this fall.

M.

Evansville, Ind.

The Wm. Blackman Floral Co. and Julius Neidnagel report brisk business during home comers' week. The former firm is planning to extend four of its greenhouses by about 10,000 square feet for next season.

Frank Fischer, formerly carnation grower for the Wm. Blackman Floral Co., is now with the Stuppy Floral Co., St. Joseph, Mo.

T. L. Metcalfe, of Hopkinsville, Ky., is said to have secured quarters for a retail store to be opened here this fall.

Col. J. D. Carmody is looking up the pedigree of automobiles with a view to early investment.

The Seed Trade.

American Seed Trade Association.
Leonard H. Vaughan Chicago President; Marshall H Duryea New York First Vice-President; Edgar Gregory, Marblehead, Mass., Second Vice President; C. E Kendel, Cleveland, O., Secretary and Treasurer.
Nex annual convention, June, 1912.

VISITED CHICAGO: Joseph W. Ratekin, of Ratekin's Seed House, Shenandoah, Ia.

J. W. RATEKIN, of the Ratekin Seed House, Shenandoah, Ia., started on his annual eastern tour October 8.

AN important report on the "Seed Trade of New Zealand" will be found on page 617 of this issue.

THE considerable shortage in French radish is offset by fairly good crops in Holland, California and Michigan.

SPIREA clumps, particularly Queen Alexandria and Gladstone, have advanced 25 per cent, first hand, in Holland.

ST. LOUIS, MO.—An authority in the grass and clover seed market says, "Prices are high and I think in some things uncalled for."

SEED CORN growers in Illinois report a dangerous condition of the corn crop. From continued rains and cloudy weather dry mould appears on many ears.

THERE have been considerable sales on yellow flat varieties of onion seed to be shipped to Europe and there has been a heavy demand for pole beans from the same quarter.

PRESENTLY there is going to be a wild scramble for cabbage seed. Parties that carried over stock should show a good profit. Early flat varieties are reported very short.

EINAR KNUTSSON, representing Hjalmar Hartmann & Co., Copenhagen, Denmark, is visiting the United States and Canada and will spend two or three months on this side of the Atlantic.

THE garden seed pea situation seems to be the worst known to the trade for years, some contract growers in the west talking 10 to 25 per cent deliveries, with their full probable crop sold in advance.

CHICAGO.—Prices on the Board of Trade, October 11, for grass seed were noted as follows: Timothy, $13.50 to $15 per 100 pounds.—It has been raining nearly every day and sometimes the storms have been driving. The result is a great deal of dampness and in some cases actual rain-soaking in the crates of onion sets stored in the field. No such long continued rainy spell has been known for some years.

THERE has been a heavy demand in Denmark for cabbage this year, we are informed by Hjalmar Hartmann, of Hjalmar Hartmann & Co., Copenhagen, Denmark, and German customers are paying 10 cents a head. As it takes ten heads of cabbage to produce one pound of seed, and added to this the cost of growing for one year, the crop of seed for 1912 will be scarce and of named sorts there will only be seeds of this year's crop to sell, unless contracted for in advance.

The Late Clement Denaiffe.

The Late Clement Denaiffe.

Clement Denaiffe, late head of Denaiffe & Son, seed growers, Carignan, France, whose death was announced in THE AMERICAN FLORIST, issue of September 16, page 424, occurred at Carignan on August 31 after an illness of only a few days.

Mr. Denaiffe was born in 1836. His father, who was a hard-working seed farmer, had a quite numerous family of thirteen children. Clement was given a good education at the College of Metz, graduating therefrom at the age of 18. He was then sent traveling all through Europe, devoting considerable time to studying seed growing and seed dealing in their various phases, in all the different climates, sections and cities. He was then taken in to assist his father, who had a modest seed-growing business. Clement's knowledge obtained by travel and study, together with his great energy, soon brought the business forward rapidly. In 1889 Clement assumed entire ownership, and with 200 acres of excellent farming land, which he had bought at Carignan, a hardy climate and with some twenty capable, experienced workmen, he became before long one of the largest seed growers in Europe. His reputation spread, attracting the attention of the French government, and in 1890 he was given the contract by the French National Board of Trade for supplying about 1,500 agricultural associations in France and its possessions with their full seed requirements, and so satisfactorily has this service always been rendered that the same contract has been renewed every year since.

In 1893 Clement Denaiffe erected additional seed warehouses near the railroad station at Carignan, and purchased an additional seed farm at Presles, near Carignan. In the nearly twenty years since, more acreage has been acquired, more warehouse room has been built, the business having increased to such proportions at Mr. Denaiffe's death that the once force alone comprised 45 clerks, with 85 other employes in various capacities in the warehouses. He always took a very active part in his business affairs, only three days before his death being hard at work in the office.

In the seed business he is succeeded by his son Henry, who entered the firm in 1890, and by Maurice, a grandson, who entered in 1909.

In 1893 Clement Denaiffe was created Chevalier du Merite Agricole by the French government; in 1897 he was made Chevalier (Knight) of the Legion of Honor.

Such was the great esteem in which he was held in his native town, Carignan, that his funeral was the largest ever held in that part of the country, more than 1,000 persons following the hearse to the cemetery.

Danish Seed Crops.

Hjalmar Hartmann & Co., Copenhagen, Denmark, reports the seed conditions of that country September 25, as follows:

Cabbage, white and red—The prospects are for a fair crop. Wintering was very favorable, owing to the mild winter and practical absence of frost, so that only five to ten per cent of the late cabbages and about 20 per cent of the early cabbages were lost. The fine spring and good weather in April and May contributed to this favorable result and except in some places where green lice infected the flowering plants in May, the growth, until ripening, was very good. Copenhagen Market only proves to be a very poor yielder, as owing to its smoothness and fine quality of heads these are inclined to rot. The general condition of heads for planting for 1912 crop is middling. The plants have suffered through drouth and attacks of worms.

Cauliflower—The prospects are for a good middling crop. If the weather had not been continually dry in July and August the crop would have been abundant.

Grass seed—Dactylis glomarata, Festuca pratensis and Poa trivalis crop very good and fine qualities, prices high.

Mangold—Middling, but prices exceedingly high owing to failure in Germany.

Turnip—Very good.

Carrot—Short.

Plant Imports From Ghent.

The exportation of plants and bulbs from Ghent to the United States during the year 1910 amounted to $362,682, states Consul W. P. Atwell in the Consular and Trade Reports, showing an increase of $27,014 over the preceding year. The immediate results of the prosperous conditions in this line are shown by the increasing number of establishments. It is a common sight to see nurseries with only one or two greenhouses and where the whole family of the horticulturist form the laboring element. It is for this reason that some varieties of plants are offered at exceptionally low prices. The more important firms regularly visit the United States each year soliciting orders. The past year showed a scarcity of palms, and certain varieties of azaleas considerably increased in price.

There seems to have been in general among nurserymen insufficient attention paid to the inspection of their establishments with a view to detecting the existence of insect diseases. The Belgian Entomologist reported a disease known as Acalla schalleriana var. Azaleana Naumann, which had commonly affected azaleas throughout the year, and in some instances had caused great damage. The disease only affected certain districts, while in others no trace of it could be found. The Belgian Syndical Chamber of Horticulturists has requested the institution of a plant-inspection bureau, which it is hoped will render important services in inspecting nurseries with a view to detecting and eliminating all dangerous plant insect diseases.

THE harvesting of tuberose bulbs is beginning this week in the growing districts.

CANNAS

Order now and increase your stock by Spring. Our stock of Cannas is in excellent shape and absolutely true to name. Will make the following low price for the next 30 days only:—

King Humbert, The King of all Cannas. $3.50 per 100; $30.00 per 1000.

714 Chestnut Street., Philadelphia, Pa.

CHRYSANTHEMUMS

Having disposed of our surplus stock plants of **Advance**, we are now in position to take orders for young plants, for January or February delivery, of the three following:

Smith's Advance—The earliest large flowering white a fine companion of Golden Glow. Can be had from July onward, according to date of planting and selecting buds. Being more dwarf and flowers more double than October Frost is a decided improvement on that variety. It has been so well received by all purchasers this season that we predict a very heavy demand. **Price: $1.20 per 10; $10.00 per 100.**

Unaka—This variety has sustained our last year description. Being a strong grower, with perfect stem and foliage, a fine incurved bloom of a pleasing shade of pink, and maturing the first week of October places it foremost among early pinks. In fact, there is no other good pink to compete with it at this date. **Price: $1.20 per 10; $10.00 per 100.**

Chrysolora—This variety is about 15 days earlier than Col. D. Appleton; is of larger size stronger stem, not as tall, in color is intermediate between this variety and Major Bonnaffon This, with its excellent keeping qualities, places it in the front ranks of the commercial sorts. **Price: $3.00 per 10; $25.00 per 100.**

GRAND RAPIDS, MICH.—The sale of the greenhouses and 12 acres of land of C. M. Norton is reported to J. Bakker, who will continue the business carried on by Mr. Norton.

Parsley.

The tendency of human nature is to follow the big run. Thus growers chase the standard crops when very often some of the minor subjects are overlooked, which might pay very much better. We have a forcible illustration of this at hand in one acre of Lima beans and one-twentieth acre of parsley; our records show that the parsley has fully kept up with the Lima bean field in returns with the expense account much in favor of the parsley. This is out of doors, but the same is often true inside. There are many places where a bed of parsley under glass would outstrip lettuce or anything else.

Parsley should not be grown under benches or along walks where it is trampled on, or in any bad spot. It wants a good clear roof, a cool temperature and deep rich soil. We transplant strong field roots in September into the house, removing all field growth except the heart leaves. Shorten the roots and plant about four inches by six inches apart. After under way they will respond to chemicals, especially to nitrate of soda and sulphate of potash. We want the growth to come heavy and curled, of fine color and heavy stem.

MARKETMAN.

American Tomatoes in England.

A sample shipment of American tomatoes was recently unpacked in Sheffield and the fruit was found to be in a very satisfactory condition. Only one tomato showed any sign of a bruise, states Vice-Consul Charles N. Daniels. The variety that appeared to meet with the most favor was the Stone. The consignee stated that the Globe and the Buckeye were too large for the English market and also showed some blemishes. Tomatoes are usually eaten raw here or used in salads, and more often than not are served without peeling, so that a smooth-skinned tomato without blemishes has the preference. Any mark, as an insect sting or a crack that has healed and left a scar, serves to lower the grade of the tomato in the market. The condition in which this shipment arrived is proof that tomatoes could be shipped to England from Florida and find a market at seasons of the year when the home-grown article is not plentiful.

A tomato to suit this market should run from 1½ to three inches in diameter, should ripen to a good color, have a smooth skin, and when packed should be carefully graded, the perfect ones being separated from those showing even the slightest mark on the skin. The mixing of the two grades would result in the lowering of the grade of the whole.

If a tomato like the Stone, with its firm pulp and fine flavor, could be grown in size to suit this market, there is no reason why it should not find a ready sale. The condition in which those sent arrived shows that they will stand the transportation all right. One of the partly ripe Buckeyes showed a tendency to rot before the ripening was completed. Whether this was due to some bruise received in transportation or to the fact that it was not cut at the right time is a question. The proper stage at which they should be cut could be determined by experiment. In the opinion of the dealer it would be better to ship them in tight boxes, thus keeping the air away from them, rather than in open crates. The fact that the Stone tomatoes were each wrapped in paper bears out this idea. This close package is the one in use by the French growers, and it is also used by a firm shipping Canary tomatoes. The Bordeaux shippers pack the fruit in a flat paper-lined box without wrapping the tomatoes separately, but the Canary tomatoes are each wrapped in paper and then packed in peat moss, which is sent from England for that purpose. The dealer is inclined to think that this paper wrapping tends to ripen the fruit better.

There appear to be two kinds of the Stone, one inclined to be flat and the other longer and more pointed at the blossom end. The flat ones would be the better suited for this market. Both kinds, however, appeared to stand transportation equally well.

The manager of the leading retail grocery sampled the Stone and pronounced it superior in every way to the Canary tomatoes he handles. He added that if this tomato could be grown in a size to suit this market and could compete with the Canary fruit in price, it would undoubtedly find a sale; in fact he stated that he would give it the preference for his own trade, which is the best in the city.

The approximate prices of tomatoes in Sheffield at different seasons of the year are as follows: First quarter, Canary tomatoes 12 to 16 cents per pound, and English hot house tomatoes selling at fancy prices; second quarter, Canary five to eight cents; fourth English 16 to 20 cents, Canary eight cents; third quarter, English 12 cents, canary, five to eight cents; fourth quarter, English 16 to 20 cents, Canary 12 to 16 cents per pound.

The Nursery Trade

American Association of Nurserymen

J. H. Dayton, Painesville, O., President; W. H. Wyman, North Abington, Mass., Vice-President; John Hall, Rochester, N.Y., Sec'y. Thirty-seventh annual convention to be held at Boston, Mass., 1912.

ASBURY PARK, N. J.—George Richter has assumed the management of the Ross-Fenton greenhouses and nurseries.

PORTSMOUTH, R. I.—V. A. Vanicek of Newport has leased a ten-acre farm for his nursery stock and will take possession in March, 1912.

PROVIDENCE, R. I.—The Home Nursery, of Norwood, are putting up two new greenhouses, King construction, one 35x220 feet and another 28x118 feet.

DANIELSON, CONN.—A. Bretschneider has had a beautiful display of dahlias at his greenhouse and nursery on North street that has delighted many visitors.

FRUIT trees from California, it is said, will be planted in Egypt by an English company which has secured a large tract of land with a view of engaging in the fruit growing industry on an extensive scale.

NORTHAMPTON, MASS.—J. W. Adams & Co. of Springfield donated 175 shrubs as prizes for the Carnegie flower competition held September 27. There were 1,100 entries from interested garden owners for the several premiums.

Three Golden-Leaved Elms.

People who are keen on golden or variegated leaved trees can find varieties of both kinds to suit them among the elms, for there are several with silver variegated leaves and at least three with golden foliage. Of the last-named, two are included as varieties of the common elm, Ulmus campestris, and the other is a form of the Wych elm, U. montana. The most vigorous of the three is U. campestris var. Louis van Houtte. This forms a handsome tree, and has the appearance of growing eventually to the same size as the type. The leaves are large and the majority golden; some, however, are a combination of green and gold. They keep their color well throughout the year; therefore it is a good tree to plant in groups where a color effect on an extensive scale is desired, states a correspondent in The Garden.

U. campestris var. antarctica aurea is a very different tree from the last named, for it is not of vigorous growth and the leaves are small. It grows slowly into a tree 20 feet to 40 feet high, with a narrow head of very fine branchlets. The leaves are golden or green and gold, and keep their color well. It may be used effectively where a small tree only is required, but is less imposing than the last-named. U. montana var. fastigiata aurea is characterized by a stiff, upright habit and large golden leaves. It keeps it color well and is useful for positions where columnar trees are desired. It is sometimes met with as U. Dampieri aurea, U. Dampieri Wredei and U. Wredi.

Washington.

TRADE SHOWS IMPROVEMENT.

There is a marked improvement in the condition of business. In the retail stores activity has taken the place of the listless waiting for customers that never came, noticeable during the summer months. In addition to a great increase in counter trade the orders for funeral work were heavy during the past week. As noted last week, there is an abundant supply of stock. Though some stock is being shipped in from outside points, it would appear that the growers of this district, and those in Maryland and Virginia in its immediate vicinity, could amply supply the demand. However, a good supply of stock is a very fluctuating and elusive quantity; now you have it and now you don't; so it cannot be foretold what the condition of the market may be as the demand increases and the long, dark nights and short days of winter are at hand. The chrysanmums are now beginning to come in, but not in sufficient quantity to affect other stocks; but from now on they will be on the increase until their season reaches its climax. There are vast quantites of dahlias coming in and some of them are very fine. Cosmos is also an attractive feature for the customers who like a big, showy bunch at small cost. Both the quantity and quality of roses and carnations continues to improve. American Beauties, the Killarneys, Radiance, My Maryland and other varieties are seen in good form. During the dahlia and chrysanthemum season the carnations have a rather uphill fight for recognition, but they make a creditable showing for the season. The trade in ferns, rubber plants and small palms is picking up, as it always does when the winter homes are re-established.

NOTES.

A large funeral which brought out much fine work (October 8) was that of W. E. Curtis, the noted writer. It may here be said that there are tens of thousands of men and women throughout the country who never met Mr. Curtis who will learn of his death with a sense of personal loss. He was a peerless correspondent, who seemed to have mastered the details of every branch of human activity, and could make what under some hands would be a dry subject as entertaining as the best novel. "Peace hath her victories no less than war," and also her heroes, and it is a grand thought that a sympathetic nation divides its honors with impartial hand.

The United States Department of Agriculture is experimenting on how to take the pucker out of green persimmons and has issued a bulletin on the subject. As a means of spending part of that $15,000,000, which President Taft says is the annual expense of the department, this may be right, but it somehow reminds us of the fruit vendors who perambulate the streets of Constantinople and loudly proclaim: "In the name of the Prophet!—figs."

There were a great number of fine funeral pieces seen at the funeral of Rear Admiral W. S. Schley, October 5. The army, navy, fraternal and patriotic societies joined in paying the last fitting tribute to one who had been a national figure and who had been beloved for his kindly ways.

At J. R. Freeman's store we recently noted a fine stock of roses and carnations, grown at their own range. The pink rose Radiance was a noteworthy feature. They are also showing a fine stock of palms, ferns, dracænas and rubber plants.

The Florists' Club met on the night of October 3. There was a light attendance and little business was transacted. There was some talk of renting a hall which will be again taken up.

Much of the work for the Schley funeral, particularly that of the patriotic societies, was executed by J. H. Small & Sons, who also had a number of fine pieces for the Curtis funeral.

Wm. F. and Adolphus Gude, who were personal friends of Admiral Schley, sent American Beauty roses and orchids as personal tributes. This firm had also much work on these funerals.

Gude Bros. are now selling very creditable violets for the season, grown at their own range, where they have a large area in these plants.

There continues to be quite a demand for carnation plants as the hot and dry summer was hard on the outdoor stock.

Jos. B. Merritt, of Walker's Chapel, is sending in the finest dahlias we have seen.

Jacob Minder was the first grower in the market with chrysanthemums.

A. F. F.

WASHINGTON, D. C.—The Washington Bulb Co. has been incorporated with a capital stock of $1,000, the incorporators being Oscar W. D'Alcorn, Edward P. Rodman and John E. Melton.

NEW BEDFORD, MASS.—Thomas J. Grey, the Boston seedsman, addressed the New Bedford Horticultural Society October 2, giving an interesting talk on his trip to England, Scotland and Ireland the last summer.

Azaleas Are In!

Start Them Now for Christmas

We have received our first car of Belgian Azaleas, fine plants, **personally picked and selected in Ghent** by a member of our company; **re-assorted here,** and none delivered to our customers that do not come up to the highest standard of excellence—**shapely, well-balanced, abundantly-budded plants.**

MR. W. A. SALTFORD of "The Saltford Flower Shop" (whom we quote by permission) said last year: "The Azaleas we bought from Jackson & Perkins Company were the finest lot we ever forced, and we have given them a duplicate order for four hundred plants this year." (And Mr. Saltford was so well pleased with **that** lot that he gave us another large order for Azaleas **this** year.)

VARIETIES:

This list, and a few more, and while they last at these prices:

Apollo. Double; dark red; late.
Bernard Andreas Alba Double; pure white. late.
Deutsche Perle. Double; pure white; one of the best.
Doctor Moore. Double; deep rose; fine; late.
Empereur du Bresil. Double; soft rose; extra fine; late.
Empress of India. Double; rich, rosy salmon; late.
Ernest Eeckhautte. Double; brilliant red.
Madame Petrick. Semi-double; deep rose; very early.
Madame Van der Cruyssen. Semi-double; bright red; early.
Niobe. Fine; double white; late.
Prof. Wolters. Single: rose, bordered with white; early.
Simon Mardner. Double pink; early.
Vervaeneana. Double; rosy salmon, white margin; early.
Vervaeneana Alba. New, very desirable early kind.

Prices:

	Per doz.	Per 100		Per doz.	Per 100
10 to 12 inches in diameter....	$5.00	$38.00	14 to 16 inches in diameter...	$ 7.50	$60.00
12 to 14 inches in diameter....	6.00	48.00	16 to 18 inches in diameter...	12.00	90.00

"The Azaleas you shipped me this fall are certainly fine; the Madame Petrick were brought into bloom for Christmas **without forcing.** We had the best Azaleas in Worcester for the holidays, and I can assure you of my order for next season."
CHAS. D. MACKIE. Worcester, Mass., Dec. 31, 1910.

"The car of plants came through in fine shape; the Azaleas and Rhododendrons were **very fine;** in fact, **beyond criticism.**"
T. R. HOPKINS, Seattle, Washington, Jan. 11, 1911.

Prompt orders are invited, while the assortment is complete, and while the plants are fresh and perfect. Get them started for the holidays. **Nothing easier to bring into bloom,** and **nothing more salable or more profitable** than these handsome plants when in bloom.

The Burnham

Herny Kruitbosch, Gardener for Thos. Prehn, Passiac, N. J., Says He Gets Too Much Heat for His Greenhouses.

"The two Burnham water sectionals—No. 724 and No. 818 we have connected to the coils and radiators in the stables, two greenhouses and garage—there's just one trouble—**they give too much heat.** Half of the time the 818 is not necessary, so we simply turn the valve and cut it out. Keep going all night without touching. It is the easiest boiler to keep clean I ever saw. Guess that's one of the reasons why it heats up so well.

Henry Kruitbosch

Trouble Talk
No 9

Second Series

It's about camping out and what it taught me about a boiler.

Summers, when I was a boy, my Uncle Sam used to take "five of us kids" down to Wawayanda Lake for a week's camping. Well do I remember the first time it was my turn to make the fire and boil some water for the coffee. I got a bully fire going and then picked out a good deep kettle and filling it **full of water,** hung it on the crane hook. Then I sat down on a flat stone and waited for it to boil. And I waited. And after that I waited. Then Uncle came out of the tent and exclaimed, "Why under heavens does it take you so long to boil a little water!" When he looked at that deep kettle full of water he smiled and said: "Look here, Mac, let me tell you something about boiling water; if you want it to boil quickly, choose a wide bottomed kettle and then put only a little water in it and in a jiffy it will be boiling."

Many years afterwards I hired with Hitchings & Company, and one day I was unexpectedly sent out to sell a boiler. The Boss kind of coached me up on its points and then I went down to the foundry and looked a boiler over.

When I began talking to the customer, about the first thing he asked me was, "What kind of fire surfaces has your boiler?" For the instant I was stumped; then I thought of that camp kettle experience and at once explained to him how our boiler was like that quick boiling kettle, because it had a large fire surface and a shallow amount of water in the water ways, which meant the boiling point would be reached in the quickest possible time. Not satisfied with that he replied: "But I don't want a kettle, I want a boiler." Then I pulled this little comb out of my pocket and explained to him how the fire surfaces in Hitchings' boiler were built something like the teeth of the comb, and that the fire came up between the teeth and that each tooth was hollow and filled with water. Then I measured the length of one tooth and found that it was ½ an inch, or that it would take eight teeth to equal the length of the 4-inch comb. "Now," said I, "there are twenty-four teeth in the comb, or just 3 times as much surface as there are in eight teeth, which is just about the same difference there is between the flat bottom of a camp kettle and the fire channeled **surfaces of the fire pot and combustion** chamber in Hitchings' boiler. This I followed up by saying that in addition to the large **direct** fire surfaces there were also the **indirect** ones, which strained out still further heat from the gases and smoke, and allowed only enough to go up chimney to create the necessary draft. Then when I also explained how this fire travel was three times back and forth on each side of the boiler, or **six times** in all, he stopped treating me like the green salesman that I was. And he bought the boiler. Bought it, because the boiler had sold itself; just as it does every time a buyer will take the trouble to thoroughly investigate it and compare it honestly with any other boiler.

If you want camp kettles, go to a hardware man. If you want a greenhouse boiler, buy a Hitchings'.

Address your letter right to The Trouble Man and I will see that your boiler is shipped promptly. But be sure to send it, care of

Hitchings & Company, Elizabeth, N. J.

Next Week's Talk will tell the difference between $4,115 and $5,506. Or what the difference really is.

Sketch of some close figuring done with a piece of chalk.

Aphine

The Insecticide that kills plant Lice of every species

Just the remedy for the black aphis on chrysanthemums—red spider and thrips on carnations—greenfly on roses—mealy bug on gardenias and crotons—scale on ferns, palms and other decorative stock.

$2.50 per gallon; $1.00 per quart.

FUNGINE

Fungine has has no equal for carnation rust, rust on chrysanthemums and mildew on roses

$2.00 per gallon; 75c per quart.

There is but one convincing way for you to become familiar with the merits of Aphine and Fungine, and that is—test them out your self—it will prove worth your while.

For Sale by Seedsmen.

The Fumigating Kind Tobacco Powder

$3.00 per bag 100 lbs.

Satisfaction guaranteed or money back; why try cheap substitutes that makers do not dare to guarantee?

THE B. A. STOOTHOFF CO., MOUNT VERNON, N. Y.

Who Is Right? How Are You Going to Tell?

Two men will tell you directly opposite things about the merits of certain greenhouse constructions.

One says: "Build O—— and Company's house; it's the best house being built today."

The other says: "Whatever you do, don't let O—— and Company build for you. Why, their house won't stand the racket; can't, because it isn't built right."

Who, then is right?

Who can you believe?

Neither, is our answer.

Do your own deciding—that's the way.

Listen to what the other fellows have to say, and then base your decision fairly and squarely, not on whose house is the cheapest, but whose is absolutely the best.

If price and construction seem about alike, then choose the firm with the greatest experience—the one longest in business.

You can absolutely depend on such a concern making good.

They have got to make good; their years of good reputation won't allow them to do anything else.

When you hear a concern claiming that "their house is every bit as good as Lord & Burnham's," it most certainly means that Lord & Burnham's houses are taken as the standard for the best. There is no getting around that fact.

No getting around our reputation of over half a century's standing.

No getting back of the hundreds of houses all over the United States standing back of our standing.

Who then shall build for you?

If you want the best, don't you see there can be but the one answer?

Lord & Burnham Company,

Factories; IRVINGTON, N.Y., and DES PLAINES, ILL.

Two layers of glass instead of one

You never cover Sunlight Double Glass Sash

You do away with heavy, expensive mats and boards, and your plants get *all the light all the time.*

The dry air between the two layers of glass takes the place of mats and boards

It is ⅝ inch thick and is a better non-conductor. The glass is held in place without putty—can't slip out—easily replaced.

Crops on the market weeks ahead

Under Sunlight Double Glass Sash your plants are earlier and sturdier and you can have bigger, better crops on the market weeks ahead while the prices are still high. In many cases the extra profit on one crop has paid for the sash themselves.

Next meeting at Boston, Mass., 1912. W. H. DUNN, Kansas City, Mo., Pres.; F. L. MULFORD, Washington, D. C., Sec'y-Treas.

SUGGESTIONS FOR PLANT GROWERS.

Lilies.

The lily bulbs will soon be here and preparations should be made to handle them immediately upon their arrival. There is no time to waste in order to have this crop in the best of shape for Easter, especially with the bulbs that are imported from Japan. Whichever way the bulbs are to grow, whether in 4-inch or 6-inch pots, it is necessary to have pots enough on hand to pot them all up at once, and a pile of good, rich soil all ready, so that there will be no delay. The rapid potting of these bulbs by some growers is done as follows: The 6-inch pots are placed touching each other and then filled about half full of soil, the bulbs are then placed on the soil and the pot filled in nearly to the top and watered. This can be done in this manner very rapidly and there is but very little handling of either the pots or bulbs. After the bulbs are in the pots they should be buried outside until good, strong root growth has taken place, the success or failure of the crop will mainly depend on having the bulb make good roots early. A frame that can be covered during excessive wet weather is the best place for these plants until they are brought into the houses. If the weather becomes very cold and severe the frames should be covered with sash or the beds have straw or some other protection thrown over them. If kept cool the bulbs will make strong roots before the top starts to grow, yet the ground over them should not be allowed to freeze or damage will be done. The giganteums for Christmas should now be growing nicely and the buds should show about November 10, if they do not appear by that time a little extra heat will be necessary to have them in on time.

Antirrhinums.

The antirrhinums for winter and spring blooming should be planted out in the bench at once if not already done. To have good long, large spikes the soil should be rich, fully as strong as that used for rose and carnation culture. Set the plants 12 inches apart each way, and as soon as the long shoots begin to grow place a strong stake to each plant and keep the plant tied to it as fast as it grows. A night temperature of 50° is the best for the winter culture of this plant; if grown much cooler than this they will not bloom until early spring, and if warmer the spikes and flowers will be of inferior quality. While the white antirrhinum is the most in demand, for it cannot only be used as a decorative flower but also arranges beautifully in sprays or funeral work, yet the pink is also much in favor for both purposes; the yellow also is very popular as a cut flower and in decorations, but the reds and other colors should be grown in small quantities, for they are not popular with many of the customers. With the exception of keeping the plants tied erect they will not require much attention until they begin to bloom.

After Chrysanthemums.

The early chrysanthemums are now through flowering and the space that they have occupied should be made of use by a growing crop. The soil in which they have been grown should be removed, it is very seldom that a good crop of any flower can be grown in the soil that has produced chrysanthemums. While it looks to be all right, and often has much manure in it that the chrysanthemums have not taken up, yet our experience has been that the soil will not grow a succeeding crop. It is better to throw it out in a pile where it can be subjected to the sweetening process of nature. The stock plants of the chrysanthemums can be selected and blocked up closely together and the surplus stock sold, and the space made ready for a following crop. Many growers frequently ask what can be grown to follow chrysanthemums. It depends greatly upon what the trade demands, where the early frosts are not severe, the single violets are left in the field and planted in the beds, but in the northern section of the country the weather is often too severe, the plants being badly frozen and will not recover until mid-winter. Plant growers will require the space for the growing plants and the lilies where planted early can be moved into

the benches. Sweet peas make a good crop in these beds for spring blooming, if the seed is planted in pots in October and then transplanted to the beds early they can be bloomed in March. There are a number of annuals that can be profitably grown, such as Bachelor's Buttons, and stocks, or early blooming herbaceous plants like Canterbury Bells, and Coreopsis lanceolata, which will give an attractive assortment of flowers in early spring.

Poinsettias.

The crucial period in the growth of pionsettias is now at hand, and if the plants are in good condition there should be no difficulty in bringing them through all right. Steady firing can now be depended upon to maintain the proper temperature. Until the bracts are well formed, keep an even temperature and while these are forming avoid all draughts as much as possible. If the house is kept uniform at 60° at night with a rise of 10 degrees during the day there will be but little trouble wth the leaves dropping, but a fluctuating temperature will surely result in plants with bare stems. As soon as the bracts form tie the plants to stakes so as to support the flowers and have the plants erect. As many of the plants are used for home decoration a neat green painted stick adds to the attractiveness. The early struck plants and those that are grown in benches for cut bloom will be greatly benefited by a watering with liquid manure. Do not make it too strong at first, begin with a weak liquid once a week and increase the strength, but after the bracts are fully out discontinue the watering with liquid manure or the color may be affected. The small plants should be placed in pans at once, if not already done. They can be easily sized up now to make a fine appearance,—a taller one in the center and shorter ones on the outside of the pan makes the best appearance.

Roman Hyacinths.

The early Roman hyacinths should be well enough rooted to bring them into the houses. These early bulbs will require a little more heat than those that are forced later, when more time is given them to form good roots. A plan often adopted by growers of early bulbs is to place them under the benches on the heating pipes when first brought into the houses. Where hot water circulation is in use the boxes can be placed directly on the pipes, but with steam pipes it will be necessary to place pieces of wood or other material on the pipes, at least two inches thick, to protect the roots from the intense heat radiated by the steam pipes, and the boxes carefully watched to see that they do not dry out at the bottom. Make weekly plantings of Roman hyacinths in order to keep up the supply of flowers. Place some of the bulbs in bulb pans—a few of these will prove very satisfactory for house decoration, and if not used for this purpose the flowers can be cut the same as from the boxes. It entails but little more labor to grow them in pots and at times they are very useful as a pot plant.

WASHINGTON, D. C.—J. H. Small & Sons have rented the store in the new Woodward building which is nearing completion.

THE RETAIL TRADE

Conducted by Robt. Kift, Philadelphia, Pa.

Basket of Marguerites.

The use of baskets in floral work has increased to a great extent in the last few years. These baskets can be now procured in so many pretty forms and sizes that the florist can produce a large variety of effects by judicious selection and arrangement, and the small baskets can be arranged very cheaply with many of the smaller flowers and their simplicity, if the workmanship is artistic, appeals at once to the customer. The basket of Queen Alexandra marguerites, tied with yellow dew-drop maline and baby ribbon, which we illustrate, is a beautiful example of this class of work and also the artistic ability of George M. Geraghty, the expert designer at Dunlop's, Toronto, Ont., and clearly shows what beautiful arrangements can be made with many of the simpler flowers. The flowers should be arranged loosely and lightly, avoiding all compactness, some extending above the others

Poinsettia Pulcherrima.

and with some gracefully hanging over the edges, giving a natural effect.

There are no limitations whatever in this work, for baskets can be procured that are particularly applicable in form, shape and texture for any purpose, and all the smaller flowers within command of the designer can be employed. The smaller roses of all kinds are well adapted to these arrangements and many of the stores in the several cities are using the rose Mrs. Aaron Ward in this manner, having baskets all ready made up to show the customers or displaying them in their windows. Lily of valley makes a beautiful basket and this flower with one or two cattleyas makes a beautiful combination. But it is not only with the expensive flowers that attractive baskets can be made, for pansies, daisies, single and pompon chrysanthemums, sweet peas of the several colors, freesias and the smaller bulbous flowers, sprays of azaleas cut from plants that have passed their salable stage, in fact, any of the flowers of the season that do not make up too heavily, for these baskets are not large, but small and dainty, and the large and prominent flowers are not fitting for these light artistic arrangements.

A bow of silk gauzy ribbon tied on the handle and on the side, of the color of the flowers or in harmony with them, is a very effective addition, many of the fancy gauzy ribbons being especially adapted to this work. These baskets can be used upon all occasions, at dinner decorations, or as table ornaments or to be carried on any occasion, in fact, they will take the place of the bouquet for any purpose. They are very satisfactory to the customer and are inexpensive, giving opportunities to use flowers that cannot be sold for vases and therefore a nice line of these accessories is a valuable asset to the dealer.

Fall Wedding Decorations.

THE DRESDEN EMBLEMATIC DECORATION.

The sense of beauty—the great advantage and charm of a ballroom wedding decoration lies in its daintiness as well as the fitness of the floral arrangement.

Strips made of pink and white flowers and hung in the manner of tapestry make a nice effect. These strips should be about 27 inches wide, made of pink carnations and edged with lily of the valley, using asparagus for a finish. This should be hung sufficiently high on the walls to allow for floral arrangements to be suspended at various intervals beneath the strip. Flat wall pockets made of baskets in groups of three, placing the center one higher than the other two, attaching all three to the strip with a bow knot of pink satin sash ribbon. Each pocket should have a separate bow knot. Three of this design should be placed beneath the floral strip. Make the wall pockets of pink roses, using asparagus as a finish. These should be arranged in as loose and artistic a manner as possible. The idea is to make the long wall look like rich Arras tapestry in a floral suggestion. The usual distance between such designs as wall pockets in groups of three should be about one and a half the width of the arrangement. In the corners place large handle baskets of Killarney roses loosely arranged on a pedestal, back of which arrange palms of various sizes. The pink sash ribbon on top of the baskets can be tied to one of the palms to give a touch of color in the green.

For the canopy make a Japanese shop curtain effect of pink roses. From each corner of the curtain in front extend a garland of pink roses to the chandelier in center of ballroom. On the sides of the canopy use showers of pink rosebuds with their foliage. The garlands should be full and gracefully made with enough green to offset the mass of pink. For the aisle place white posts, on top of which arrange balls of pink carnations on a mat of maidenhair ferns—connect each post with pink and white sash ribbon. A prie dieu can be used effectively if made of pink carnations and white satin. Drape asparagus over the doors, on chandeliers and wherever necessary to give it a finishing touch depending upon the ballroom to be decorated.

For the dining table use Killarney roses, massing them in an oblong flat basket. Make a large garland of maidenhair for the edge of the basket and interspersed with small electric lights. A strip of maidenhair can effectively be used extending over the longest

BASKET OF MARGUERITES.

width of the table with a narrow edge of pink rosebuds.

The bridal bouquet may be of white roses and lilac and lily of the valley made in three sectional effect tied with gauze ribbon. The bridesmaid's bouquets to be of pink carnations tied in bunches to be carried by a loop of sash ribbon over the arm.

A. E. KLUNDER.

Antirrhinums.

The antirrhinum or snapdragon, as it is commonly called, is being grown for cut flowers in increased quantities every year. There are many beautiful shades of colors among these plants but a large number of them are not suitable to grow for cut flowers. Some of the deeper shades are very fine outside during the summer but they come dull and poor colored when grown inside in winter, also a great many of them do not open up their flowers sufficiently to show the colorings as they should be; instead they remain closed, showing the reverse side which gives them a sleepy appearance. The principal demand is for a clear white, a distinct deep yellow, a light pink and a limited number of the coral red and deep pink shades. This is a range of colors to meet every purpose. When stocking up with antirrhinums select the giant flowered type; they are longer in stem and the individual flowers are much larger, which greatly enhances the beauty of the spikes.

The antirrhinum up to a year or two ago was grown principally as a catch crop and most of the growers who now grow them do so with the object of following up a bench or two of chrysanthemums with them. To be successful with these plants under this method it is essential that the plants are strong and healthy with good heavy roots; thus they will take hold of the soil quickly and in a short while will begin to pay their way. The past two years we have grown two benches of snapdragons under this plan and have found them profitable. The stock we grow was our own selection obtained from seed from the different seedsmen. This seed was sown in early spring, the young seedlings transplanted when they needed it, then planted out in the field the same and at the same time as the carnations. When they bloomed a selection was made of the most desirable forms and colors. These were sifted down after a winter's trial to the four colors herein mentioned and from these we now propagate the stock for our plantings.

The cuttings are started in February or March and as soon as rooted they are potted into 2¼-inch pots and grown in a cool house with plenty of light. The growth is kept nipped back from time to time to give the plant a chance to branch out and become stocky. They are planted in the field at the same time as we plant our carnations, which is generally between the first and eighth of May. From this on during the summer the field culture is about the same as given carnations with the addition of cutting out some of the blind wood. Early in September the plants are potted into five or six-inch pots and set out in frames under raised sash. Here they remain until some of the benches of chrysanthemums are ready for them if the weather turns very cold while the plants are out in the frames we

cover the frames with a heavy canvas at night. The plantings of the chrysanthemums should be so arranged that the beds intended for the antirrhinums to follow can be cleaned out early, it being the same with these plants as with all others—the earlier they are got into their permanent quarters the sooner they commence to do business.

The soil which the chrysanthemums have been growing in should be cleaned out and a fresh soil put in for the snapdragons; they will not do anything in old chrysanthemum soil. The soil best suited for these plants is one of a similar consistency as that used for carnations. There is not anything gained by planting close because these plants require plenty of air and light to properly develop the long spikes of blooms. They should be planted about 12 to 15 inches apart. Plant firmly, watering well in at planting, then allow them to dry out moderately before watering again. The temperature best suited to them is a night and day temperature the same as is recommended for the carnation. The first thing that comes up after the plants are set in is that of supports and staking, and it is one of the most important. There is not any plant that will suffer more quickly if the branches are not supported and it does not matter how fine the flowers are, if the stems are crooked they will not sell. We do not know of any better way of supporting than that of the length wires and cross strings. Antirrhinums after they are well established with roots delight in plenty of liquid fertilizer, especially towards spring. There is not any plant more subject to aphis than these and they must be kept clean or they will be ruined. C. W. JOHNSON.

Shrubs for Pots and Boxes.

The time is at hand when there will be a demand for various hardy evergreens to take the place of summer-flowering plants. It is surprising to find, that though there are such large quantities to be found in our English nurseries, some buyers send their orders to the continent. They may save a little on actual outlay, but my experience has been that home-grown plants are much more satisfactory. Really good euonymus may be scarce this season, for the frost made sad havoc among them last winter; yet I find some growers who were in sheltered districts, or could give them some slight protection, are sending in some good plants, says a writer in the Horticultural Advertiser, and those who grow the large leaved silver variegated variety do well with it, but it requires a little protection in severe weather; the yellow variety, aureus, is also appreciated. The Golden Privet, Ligustrum ovalifolium aureum, has become very popular. There is quite a large demand for it in all sizes, from those in thumb pots to large specimens, and it does remarkably well in the suburbs of London. Plants one year established remain evergreen, but those transplanted from the ground lose their leaves the first season. Some growers take them up from the ground and pot them, these do not prove satisfactory; but if potted and plunged in the ground one season, they will give very little trouble, and even if a few roots come over the tops or through the bottoms of the pots, they may be trimmed off without doing much harm, provided the plants are kept fairly moist both at root and top for a few days.

The retinosporas and cupressus, of which there are so many various shades of color, are appreciated. There is just one thing about growing them. I have had to pot a good many, and in most instances have found it difficult to get the plants into the middle of the pots, through the roots being all on one side, this is owing to bad planting. I have seen much of planting, and I know that at the low prices charged it does not pay to spend much time on them. It is the treading-in of the roots from one side only that causes the trouble; and I have found that when growing specially for potting up, it pays to give a little more attention to spreading the roots out equally.

The common Aucuba Japonica is found very useful, and with these one season in pots is a great advantage, the plants will not be so coarse, and the foliage will be a better color. Aucuba vera and other sorts with small leaves are in demand when well berried, and if grown in pots under glass and carefully fertilized, it is easy to get them. One grower who does them well, told me that, though his customers complained of prices, he has always sold out, and often could have sold more. The great advantage is, that the berries hold on such a long time. When first introduced, the male plants came in much before the females, and we had to collect the pollen and keep it; but since seedlings have been raised in this country, there has not been so much difference. The males may be a little in advance, but where planted together, there is no necessity to collect the pollen, for it will retain its vitality. One thing always appears to me to be wrongly adjusted: if we could only get females with the large trusses of bloom seen on the males, what a lovely show of berries we should have; and I think, with careful selection, a great improvement in this respect might be made. Skimmia Japonica is another berried plant which deserves more attention; though very slow in growth it is of great durability when once established, and requires very little attention.

Borers in Cherry Tree.

ED. AMERICAN FLORIST:

A sour cherry tree is infested with a black bug about the size of the head of an ordinary black-headed pin, which bores into the wood and the limbs which are bored into are dying. The bug is hard shelled and when dug out runs away quickly. Can you inform us from this description what the insect is? How can we get rid of it?

Pennsylvania. W. K.

From the description of the insect and injury, it is probably the common fruit tree bark beetle Scolytus rugulosus. This insect is a small cylindrical beetle about one-tenth of an inch in length and about one-third as wide. It is uniformly black in color except a portion of the legs and the tips of the wing covers, which are a dull red. The beetles infest only such trees as are sickly or weakened as from neglect, injury from borers or other causes. It bores a small hole through the bark, beneath which a vertical brood chamber is constructed along the sides of which little pockets are excavated, where the eggs are deposited. The young larvae start boring galleries more or less at right angles to the brood chamber but these galleries soon take various directions. If attack has been severe the trees may soon be girdled. There are several generations annually. The insect attacks plums in preference to other trees, but apple, peach and cherry are equally attractive and other trees are said to be among its food plants. In orchards where proper attention is given to maintaining a healthy, vigorous condition of the trees but little is to be feared from this insect. Since it is not able to multiply to any extent save in trees that are in a weak, diseased or dying condition, these should be frequently searched for and at once destroyed by burning. It will not be sufficient to simply cut them down, for the beetles will continue to breed in portions of a tree left dying or piled on the ground, thus reinfesting the orchard. A. L. Q.

CHRYSANTHEMUM SMITH'S ADVANCE

Lifted From the Field and Benched August 15.

CHRYSANTHEMUMS

Early Chrysanthemums.

Many of the florists have limited space and are unable to plant the early varieties at the proper time. There are several kinds which will make very useful flowers if planted out of doors and lifted not later than August 15. They will be longer stems and better quality if this work is done two weeks earlier. The desire is to have them well established on the benches before the buds are formed. The stronger stems may be disbudded down to one and the weaker ones allowed to flower in sprays. It is not expected the crop will be the highest grade by such a procedure nor are they as early as bench grown plants, but very good medium and small flowers, suitable for many kinds of arrangements, are produced with very little labor. If greenhouse benches are not available deep frames or pits may be utilized, providing some kind of material such as sash or cloth is in readiness in case of early frosts.

Smith's Advance is an excellent white for this purpose and Donatello adapts itself admirably to this treatment. We do not recommend Golden Glow, as it does not lift and become readily established. There are doubtless other kinds well adapted to this method and their merits can be easily ascertained by a trial. The earlies, having plenty of fibrous roots, are less shocked by lifting. Shading, watering and spraying the foliage will require close attention for a few days to prevent them from wilting.

We have had several inquiries as to what is the best yellow to follow Golden Glow. Chrysolora is the very best for the purpose. The accompanying illustration shows the stage of development October 7. Some rely on Crocus, which is a very good yellow, but not so early as Chrysolora and should be used to succeed it. ELMER D. SMITH.

The Older Chrysanthemums.

What becomes of the old varieties of chrysanthemums and is there a collection in existence today containing the charming old kinds that we used to grow back in the eighties? No one can deny the wonderful progress made in this plant even since that date, though the strides made up to that time from the still older types and varieties was remarkable. But the giants of today are coarse in comparison with many in existence 20 years ago and it seems to the writer that we have neither the variety in form or in color that we had then. Even when grown to exhibition size the present day varieties lack distinction, but if grown as they used to be for sprays and small flowers they would be absolutely featureless, one yellow or one white would be practically the same as the other. At that time we had not such grand early flowers as Golden Glow and others and while memory does not recall for the moment the names of the late whites I do remember that after Elaine, Avalanche and other November flowering kinds were over we had to depend upon varieties with open, black centers, unless the plants were exceptionally well grown. But what we look for in vain today on our exhibition stands are such rich-colored forms as Jeanne Delaux, such lovely flowers as those of Belle Paule and such grand clear bronzes as Japonaise, Source d'Or, with its pretty tasseled petals, and others that could be named. Well, the old order changes, and "other times, other manners," but personally we would be delighted to meet some of these old favorites again.

H. R. R.

Radiating and Glazing.

ED. AMERICAN FLORIST:

What is the number of square feet of radiation required for a small house (12½x35 feet) containing about 800 square feet of glass, 5-foot side walls one-half (30-inch) glass, 10 feet to ridge, south end, only, glass, even temperature required 65 to 70 degrees in below zero weather? How many runs of 2-inch pipe are necessary? How far below bottom of side benches should the pipe be placed? Should glass in the end be butted or lapped?

Indiana. A. J. Y.

It will be desirable to use two 2½-inch flow pipes and twelve 2-inch returns. While it might answer to use two 2-inch flow pipes it will be safer to use 2½-inch flows in most cases where they have to carry more than four returns.

The flow pipes can be either carried on the plates or a couple of feet below the ridge, and the return should be from eight to twelve inches below the side benches. There would be no objection to having them even lower if they will be well above the top of the heater.

It will make very little difference how the glass in the gable is laid, but if care is taken to fit the panes a neater job can be done if they are butted.

L. R. T.

CHRYSANTHEMUM CHRYSOLORA, OCTOBER 7, 1911.

Chrysanthemum Golden Glow.

ED. AMERICAN FLORIST:

Our Golden Glow chrysanthemums were grown in an airy greenhouse. The soil was light and not too rich and they were carefully watered but with no fertilizer. As soon as they started to show color syringing and fumigating were discontinued. When the blooms became half open the outer petals turned brown. Can you inform us what was the cause? S. S. F.

Indiana.

We see nothing wrong with the cultural methods followed by "S. S. F." Golden Glow is inclined to show this defect, especially if the weather is very warm when the flowers are expanding. At this period a liberal shading should be given and keep the house as cool as possible by free circulation of air. We have noticed blooms which develop during July and August are more liable to be thus affected than those later in the season and for this reason we think the temperature has a great influence upon the quality of the crop. ELMER D. SMITH.

ASBURY PARK, N. J.—The Elberon Horticultural Society will hold a chrysanthemum show November 7-8.

SALEM, MASS.—Henry T. Conant & Co. will remove the greenhouses from the Peck estate and rebuild them at 129 Essex street.

GARY, IND.—Walter Krsysagorski, of Chicago, opened a first-class flower store here October 15.

HAMMONTON, N. J.—Trade is on the rush in this section at present time, dahlias being the principal cut flower crop. There are seven growers of dahlias here. Weather conditions have been very unfavorable this season, there having been three prolonged periods of drought.

WITH THE GROWERS

The George Wittbold Co., Edgebrook, Ill.

It has been well said that one man with a system can accomplish more than two who never plan their work and this was most forcibly brought to our mind when we visited the George Wittbold Co.'s nursery and greenhouses at Edgebrook, Ill., and had the pleasure of having the superintendent, Otto Wittbold, explain the details of their business and show us the systematic manner in which the bookkeeping and other work is performed. Every plant is accounted for, from whence it came, its cost and when and where disposed of, in fact, we could but make the same remark that Marshall P. Wilder, the humorist, credits to the insistent Hebrew who had made himself obnoxious by endeavoring to buy goods cheaper than they could be made and had been thrown down one flight of stairs by one partner, and then down a second by the other whom he met ascending, and upon landing turned and said, "What an elegant system that was," for certainly it was proved to us that the much mooted question, the cost of floral and plant production, had been solved.

GREENHOUSES OF THE GEORGE WITTBOLD CO., EDGEBROOK, ILL.

Located but a half hour's ride from Chicago, this nursery, comprising 70,000 square feet of glass on a property of 30 acres and with 50 more rented covered with nursery stock, is a fitting example what can be done in a few years when system and hard work are coupled together. It is but 10 years ago that the George Wittbold Co., with a store and greenhouses in the city that were rapidly being built around, added this plant to their already large business, and from that day the amount of trade done at this busy establishment has doubled and doubled, again and again, and now to conduct this vast business the firm employs 60 wagons, besides two automobiles and has on the payroll in the neighborhood of 150 men during the busy season.

The houses are filled to repletion with the finest of stock and we can well say filled, for to the ordinary observer they would look to be overflowing, for every inch of space is utilized and in the palm and other houses filled with decorative stock which does not require full sunlight, shelves filled with ferns, are built over the benches, and from the roof are hung thousands of baskets of Boston ferns and asparagus. The seven houses are literally stocked with the finest of material and the attempt now is to get it off their hands and make room for more that is coming on. The palms are the first thing to attract the attention and all the leading commercial varieties are found in saleable sizes, there being about 100,000 Kentia Belmoreana and Fosteriana in from 2-inch to 7-inch pots, all in splendid condition. There are also large numbers of Areca lutescens, Latania Borbonica, Phoenix Canariensis, reclinata, and Roebeleni. Dracaenas in all sizes, beautiful specimens of Massangeana terminalis and fragrans, besides thousands of Dracæna indivisa. Ficus elastica and pandurata are grown extensively and the stock of these in commercial sizes is in excellent shape. Ferns are a specialty from the small potted plants which are grown by the tens of thousands for fern dishes to the specimen Cibotium Schiedei, and an immense quantity of Boston ferns in all sizes in pots and elegant specimens in baskets suspended from the roofs. Pandanus utilis and Veitchii are to be seen in fine condition and in nice sizes for the retail trade. Asparagus is a specialty and can be found in all sizes from seedlings to large baskets, the seed planting this year will give 125,000 plumosus and 35,000 Sprengerii. Auracarias of fine growth and crotons of many varieties and colors are all in the best of condition.

But decorative stock is not the only thing grown for chrysanthemums are in elegant shape and grown to be in as early as possible to make room for the stock to follow. Golden Glow has been cut and lilies of which thousands are grown are already occupying the bench room vacated. To show how early the chrysanthemums are Col. D. Appleton on October 12 is half open. Other varieties noted were October Frost, Mrs. Buckbee, Rosette, Mdlle. Jeanne Nonin, Golden Dome, Golden Age, Wm. Duckham, Miss Virginia Poehlmann, Ivory, Pacific Supreme, Major Bonnaffon, Timothy Eaton and 5,000 pots of pompons and anemones for pot plants and cut blooms. Two houses of carnations were looking in splendid condition, the plants being of good size and the flowers of splendid quality borne on extra long stems, some of which already measure 24 inches in length. The Enchantress family is largely grown in light pink, white and rose pink, and the newer varieties are being given a trial. Dorothy Gordon, White Wonder and Mrs. C. W. Ward were all looking especially well. A scarlet Harlowarden, a sport which was obtained here, was full of flowers of an exceptionally brilliant shade of scarlet.

Christmas plants are well done, a house of poinsettias was exceptionally fine and promised some extra large heads for the holidays. Azaleas are grown in large quantities, this year's importation being 2,000 plants, and solanums, both capsicum and aculeatissimum with its large red fruit, were in fine shape, 15,000 cyclamens promise a grand sight for the holiday and winter trade, and primroses, just coming into bloom, also promise well. The bulb stock is already planted and buried and much is well rooted. Here we again noted the system employed, for every set of bulbs is labeled, from whom obtained, when received, and when potted, all the necessary memorandum upon a label fastened in a capped pipe at the beginning of the lot. Hundreds of thousands of bedding plants of all kinds are grown and sold at this establishment and the cuttings are now being propagated and in small pots awaiting room to be shifted and spaced out. The variety comprises everything employed in outside planting, geraniums of all the leading kinds and coleuses being extensively grown.

The same systematic thought is employed in the construction of the houses and the handling of the stock, that is seen in the office. The benches are all made of concrete, so there is no danger of rot or tumbling down, and the house and the outside frames are all connected with a miniature railway, a small and narrow track upon which flat

ARAUCARIAS AND DRACÆNAS AT THE GEO. WITTBOLD CO., EDGEBROOK, ILL.

cars are run, passing through the middle of each house, in through the packing room with branches that pass out to the frames into the nursery.

In the nursery is carried a complete line of perennials and herbaceous plants as well as an assortment of shrubbery, fruit, evergreen and shade trees, and a large area of ground is planted to summer flowering plants, not only from which to procure the immense amount of stock required, but for cut flowers as well. Nearly an acre is planted to dahlias of all kinds, show, decorative, cactus and pompons, and large quantities of gladioli are grown for the stores and market. Here

NURSERY AND GREENHOUSES OF THE GEO. WITTBOLD CO., EDGEBROOK, ILL.

were also seen an assortment of rambler roses of the several kinds, many being grown in pots for Easter forcing.

The firm of George Wittbold Co. is one of the oldest in the western country, having been founded by the late George Wittbold in 1869, who took an active interest in the upbuilding of the business until his death in 1910. In 1898 the business was incorporated, five sons of the founder being given an active interest; Louis being made secretary and treasurer, and manager of the Lake View or home plant at 737 Buckingham place; Otto is superintendent of the nursery and greenhouse at Edgebrook, which he ably manages; Fred, at the death of the father, assumed the presidency of the corporation, and Henry takes charge of the store and outside decorations, which is a large feature in their business. By diligent adherence to their business and motto, "Good value given on every purchase," they have built up not only an immense retail business but one of the largest shipping trades in the central country, and have earned an honored reputation not only with their customers but with the trade at large.

DANVERS, ILL.—Leo. Wellenreiter is building two houses 25x65 feet.

CAMDEN, N. J.—The Pittsburg Florists' Exchange has filed articles of incorporation. The capital stock is $15,000 and the corporators are V. A. Murray, Harvey L. Lechner and Julius H. Kendig.

NEWCASTLE, IND.—The Indiana State Florists' Association held their convention October 8, about 45 members being present. A luncheon was served in the Elks club rooms and the party made a tour of the greenhouses of the city in automobiles.

SPRINGFIELD, O.—Miss Jacobs, formerly floral manager for H. N. Sigenthaler, and Mrs. Rightmire, recently with Miss H. Vanmeter, have formed a partnership under the name of Jacobs & Rightmire, and opened a flower store at 15 South Fountain avenue.

The Horticultural Outlook.

(An address by J. K. M. L. Farquhar, Boston, delivered before the New York Florists' Club, October 9, 1911.)

RETROSPECT.

In looking backward thirty years or more one is very forcibly impressed with the advancement made in nearly every department of horticulture. Any amplification of this statement would be superfluous to this audience; rather would I speak briefly of some of the agencies which have been working for the unprecedented progress of the past ten years or so.

AGENCIES OF ADVANCEMENT.

Foremost of these agencies I place the automobile, which of itself has been the means of greatly changing the habits of the American people. The limit of suburban residence has extended from about twenty miles to a hundred, and the houses and grounds have increased in importance and area in like proportion.

The larger country estate is of greater interest than was the smaller one, and the time-saving automobile gives the owner more time in which to enjoy it, and, furthermore, having his own comfortable and ever-ready means of transportation, he goes to it earlier in the season and stays later than formerly, when his sojourn in the country depended upon railroad timetables.

The telephone, the electric lamp, and recent inventions for water supply and heating have all contributed to make life on the country estate much more enjoyable than in the immediate environment of the large city, where only such comforts and conveniences of life as were obtainable in the cities themselves could be had formerly. The automobile, too, has lessened the owner's interest in horses; the time and much of the money spent on horses are now frequently bestowed on the garden and grounds.

Another agency has been the periodical press, which, with beautiful illustrations, has done much to arouse and develop interest in gardening. The articles published have been incentives to many to make their home grounds beautiful as well as to lead them to give attention to providing home supplies of flowers, fruits and vegetables, rather than to depend upon city markets, as in the past.

I might mention many other agencies which have been instrumental in bringing so many of our people to a greater appreciation of, and interest in horticulture, but I content myself with calling attention to the influence of the country clubs. Not only have the social influence and health-giving recreations of these institutions proved beneficial, but the well-kept fair-greens and putting-greens have led many a country clubman to improve his own lawn and grounds.

WEALTH AND TRAVEL.

Millionaires and multi-millionaires are much more numerous now than they were a generation ago. Luxuries to them are now necessities, and horticulture has its share in supplying them. They have traveled abroad where they have seen things which have appealed to them, pictures, sculptures and other works of art, great houses with rich and rare furnishings, and fine old gardens, with beautiful trees, shrubs, vines and flowers—and they want them all. The gardens give us our opportunity—opportunity many times greater now than ever before in this country; opportunity greater in this than in any other country; opportunity greater than we realize and which will grow beyond our most sanguine expectations if we horticulturists to whom it comes do our part. To be successful we must seek success, not alone for ourselves but for our clients as well, and I shall aim to point out, briefly, how each one of us in his own particular branch may cultivate and propagate this present phenomenal propensity of our people for gardens and garden things.

THE PRIVATE GARDENER.

To the private gardener I would say: Make yourself master of your calling. If possible specialize in some branch

KENTIA BELMOREANA AT THE GEO. WITTBOLD CO., EDGEBROOK, ILL.

of it; it will distinguish you to do so, just as it distinguishes a physician to specialize in some department of medical science. Like him, you are really a scientific man, your calling makes you one. Yours is a long training, in fact, it is never done; but let not that fact discourage you. Not only should you learn to till the ground, how to produce crops of flowers, fruits and vegetables, both under glass and out of doors, how to use, understandingly, fertilizers, fungicides and insecticides, how to lay-out, make and plant a garden, from shade tree to water lily, how to build drains, garden walks and

PACKING HOUSE AND EMPLOYES OF THE GEO. WITTBOLD CO., EDGEBROOK, ILL.

greenhouses, but a hundred other things. Learn it all—all the art of gardening—so far as is possible, and then render to your employer the best service you can and insist upon getting equitable compensation. The demand for men who are gardeners of high grade was never so large as it is now, and such men can command good salaries. The great trouble is that too many important positions are held by incompetent men who are willing to work for compensation which would not attract a capable man.

You should endeavor to meet the wishes of your employer. Have a clear understanding with him as to what he wishes, then let him know that you must have a free hand in your work for results. Regard your garden and greenhouses as a manufacturer does his mill. Buy enough material to keep your plant running at full capacity, but do not buy anything you do not need. Do not try to return the favor of a nurseryman or seedsman who may have placed you in a position by giving him an order for supplies you do not actually require. Study the interests and wishes of your employer—he is entitled to consideration, and if he is the right sort of man he will appreciate and recognize your efforts.

THE FLORIST.

To the florist, I would say: Broaden your business. There is opportunity to do it and you will be obliged to do it to prolong your success. Have you ever tried to add to your customers from among the middle classes? Their trade is solicited when they are in want of funeral pieces, but rarely at any other time. Yet, I believe there are thousands of people of moderate means who would gladly step into a flower store on Saturday and buy a dozen carnations, with a little asparagus foliage, or a few fern fronds, with which to brighten their homes on Sunday and through the week, if such trade were encouraged. Of course, it would never do to sell to such people flowers that were about to go to sleep; they would have to be fresh and likely to keep good for several days. The feeling that the street vendor is the proper person to care for middle class trade will bar progress in this direction. The florist should endeavor to diversify the attractions he offers; comparatively little is done with flowering plants in pots. If the very dwarf antirrhinums in pink, white, yellow, etc., were planted in pans like tulips, they would be much more attractive and more lasting. Dwarf wallflowers might be similarly used; not only would they be novel and beautiful, but their delightful, mild fragrance would be appreciated. Small pots or pans of forget-me-nots, mignonette, sweet alyssum, rhodanthe, and numerous other flowers might be tried at small expense.

You have still much greater opportunity to broaden your business. Within a decade, or less, you will be furnishing pot-grown fruit trees and vines for dining room decoration. Apples, pears, plums, peaches, with from two dozen to half a hundred choice fruits on a tree; pot-grown grape vines, with half a dozen or over clusters of luscious fruit. You may even be selling in the spring or early summer the fascinating little cherry tree, in fruit, of the gay Parisian cafés.

THE SEEDSMAN.

Every seedsman should endeavor to educate his customers to the use of high grade seeds and bulbs; he will serve his own best interests in doing this. He should push and encourage the sale of the best varieties, and discourage or discard those that have been superseded.

It is but fair to the seedsman to state that he has had to struggle against adverse conditions. He has been forced to compete with irresponsible dealers who sold inferior seeds or rubbish. It is safe to say that, on the whole, the seedsman has never received the return he has deserved in this country—nothing like what his brother dealer in Europe has received. Compare the prices of the best European houses with those of any house in this country. Conditions are better than they were a dozen years ago—quality is being appreciated more generally—but many buyers still hesitate to pay a proper price for high grade seeds.

This has been especially true of Dutch bulbs. A Keizerskroon tulip weighing an ounce and a half or an ounce and three-quarters has been put in competition with others weighing from five-eighths to three-quarters of an ounce. The seedsman cannot do much for the upbuilding of his business by buying and selling the cheapest, meanest stock to be obtained. In doing this he fools himself, injures his customer, and in the end loses his trade. What I have said to the private gardener about learning his calling applies still more forcibly to the seedsman. Too many seedsmen do not know their business. The Holland bulb men are aware of this and are still taking unfair advantage of the situation. It is well known in Holland that the favorite single blue hyacinth Charles Dickens has become so deteriorated by disease that it is no longer fit to be grown. Yet it is listed and sold to this country by the Holland growers who usually send for it "Marie," a cheap, inferior sort. We have seen the

PANDANUS VEITCHII AND KENTIAS AT GEO. WITTBOLD CO. EDGEBROOK, ILL.

beautiful pure white La Grandesse substituted with La Franchise, a blush sort having a purple skinned bulb. Standard Silver and Standard Gold tulips have also deteriorated, yet these are regularly listed by many seedsmen, who in most cases receive substitutes such as Cottage Boy, Arms of Leiden, or other inferior sorts.

THE NURSERYMAN.

Nurserymen, as a rule, have been progressive, more so, perhaps, than those engaged in other lines of horticultural industry. Still, there is much for them to do. Too frequently they are more anxious to sell stock than to assure themselves that the stock sold will be well planted, that the ground will be suitably prepared, and that the after-care it receives will be such that the purchasers' success with it will bring the vendor future orders. In the long run it would not hurt the nurseryman to inform a client that the cost of preparation of ground and planting, if done properly, will equal or exceed the cost of the stock. Great ignorance prevails as to the conditions under which nursery stock will thrive, especially of the more common shade trees, which are often planted in gravel.

Nurserymen should endeavor to diversify plantations; there is ample material with which to do this and their clients would welcome the variety. New material, too, is at hand and the nurseryman has a thousand or more new trees, shrubs and vines recently brought from Western China and elsewhere with which to augment his already large variety of available material.

Many of the nurserymen are making better terms on their stocks, or allowing larger discounts to the, so-called, landscape architects than they do to private gardeners. This practice is to be regretted. It puts the gardener at a disadvantage, which is unfair to him. Why should the, so-called, landscape architect, who often has no practical horticultural knowledge, and, perhaps, nothing more than a short course in drawing, and another in reading Downing, Mawson, and a few other authors for his stock in trade—be accorded trade courtesies which give him advantage over the trained gardener who has spent fifteen or twenty years of his life in acquiring his practical knowledge? Choose ye this day whom ye will serve, brother nurserymen; but as for me, and my house, we will stand by the gardener! I will not see him superseded and supplanted by a man much his inferior in horticultural knowledge and ability.

NEW YORK HORTICULTURISTS.

New York horticulturists: Yours is the largest opportunity. You have the wealth of the country about you. You have the finest estates within a hundred miles of your doors. It is your duty to see that horticulture grows, not only in your vicinity but also throughout the country, for are you not located on the country's greatest thoroughfare? It is your duty to so serve those who come to you that they will be encouraged to become larger patrons of horticulture; and if you do this, you will undoubtedly reap the benefit.

You are planning to hold the third National Flower Show in this city. If you make the success of it of which you are capable it will prove a great stimulus for horticultural trade in New York. To do this you must get to work at once. Your schedule should be out not later than January 1. Get busy at once, gentlemen! This is your opportunity.

European Horticulture.

FROM BRITISH HORTICULTURAL PRESS.

Starved Lawns.—A nice green lawn is prized by almost everyone having a garden. In villa gardens near towns, where land is expensive, the speculative builder digs out soil from the foundations, throwing this over the good soil. When the house is finished, this is levelled and seed sown. At first the grass looks green, but never forms a lawn worthy of the name. Those that have lawns seem to think they never need feeding. Let anyone observe the amount of herbage cut from a lawn in a season. This is taken away and nothing put in its place. This goes on continually. I am often asked what to do with poor lawns, and my answer is: "Feed them." In a recreation ground near me, when the grass is cut, it is left on the ground, and this is helpful. The question arises how to feed the lawn. I have never seen anything to surpass a good mixture of short rotten manure, soot, lime, wood-ashes, bone-meal, these being added to the manure, according to the nature of the soil. I have been using these with basic slag in one or two instances. In another instance I have used dry poultry manure with soot, lime, and wood-ashes, mixing these with fine soil, and spreading over the grass during January. It would be unwise to name any one thing for all gardens, seeing the soil differs so much. I am aware most horticultural sundriesmen and nurserymen supply special lawn mixtures. These are all good, but have not the enduring nature of animal manure. When solid manures are used they should be put on in time enough to get washed into the soil before mowing begins.

Antirrhinum Rose Dore.—The popularity of antirrhinums grows apace, and deservedly so, because few flowers of such easy culture make such a fine display over a goodly period of the year, and few show such a wonderful range of coloring and of habit. There are tall, intermediate, and dwarf strains, and the color ranges from pure white to deepest crimson. The self colors are now splendid, and to these have been added varieties and strains that give art shades. Antirrhinums come very true from seeds, and they also may be propagated by means of cuttings taken in the autumn. Either for beds or borders, or for groups in large herbaceous borders, they are excellent, but for pot culture they have not yet gained much popularity. This, however, is only a matter of time, especially in these days when so many amateurs possess an unheated greenhouse, and are looking out for hardy and half-hardy plants to grow therein for early flowering. Further, there is a market for early flowers of antirrhinums if the flower spikes are good and the coloring distinct. The variety Rose Dore has become fairly popular already because of the lovely rose shade of its fine blooms. It may be had in flower in May without difficulty, and then forms a useful subject for conservatory decoration. Strong cuttings or autumn-sown seedlings, wintered in frames, will provide good plants for such flowering, and at little cost of time and trouble.

Hydrangea Arborescens Grandiflora.—Among hardy hydrangeas this is one of the most valuable plants from a decorative standpoint. It flowers at a time (July and early August) when showy flowering shrubs are by no means abundant. The species, Hydrangea arborescens, is a native of the eastern United States. The date of its introduction into this country is given as the year 1736. The subject of this note is readily propagated by cuttings during July, August and September. Like all other hardy hydrangeas, it thrives best in a well-worked rich loamy soil, a mulch of decayed manure being beneficial in early summer, especially if the season is a dry one. H. arborescens grandiflora should have the previous season's growths shortened to about half their length in spring. This will induce the plants to push up vigorous young growths, terminating with large heads of flowers. Some of these growths exceed three feet in height, with flower-heads seven inches to nine inches or more across. In the type H. arborescens, the inflorescence consists of fertile flowers and a few sterile ones, but in the variety grandiflora all are sterile and white, thus being much more showy.

The Newer Lady Gardener.—"Back to the garden" is a cry that has been heard for some time as far as the nature-loving woman is concerned. But now that numbers of women are taking to gardening from the point of view of health and beauty of complexion, the question of dress for the woman gardener who is a non-professional has become a topic of interest, agreeably says a London evening paper; and the article concludes with these delightful hints:—Gardening gloves are matters of individual preference, and some women disdain to use them at all. Those who garden without gloves usually make it a practice to fill the nails with soap before beginning work, as this prevents the soil from entering too deeply. After gardening, the hands should be rubbed with oil and brown sugar, and then washed in warm water, and a lather made of castile soap and a little borax. When thoroughly clean they should be rinsed in milk, and a little starch powder applied.

Gardeners' Evening School.—At least 130,000 students are expected to take advantage this year of the evening classes at L. C. C. schools. Among the subjects taught to the boys are watchmaking, upholstery, photo engraving, motor-construction, carriage building, gasfitting, and gardening. Other subjects provided for working men and boys include baking, confectionery, bookbinding, cycle-making, aeronautical engineering, motor driving, leather tanning, and stained glass work. Students of these classes are usually men and boys engaged in work with which the classes deal in their everyday life. Special evening classes have been provided for park gardeners.

OBITUARY.

Thorwald Jensen.

Thorwald Jensen, one of the older florists of New York, died at Mamaroneck, N. Y., October 9. He was famous many years ago as a carnation grower, two varieties, Buttercup and Porter, he grew especially well and they became celebrated at the store of Theodore Roehrs, long since retired from the wholesale business, to whom they were consigned.

Mrs. Letitia Peel.

Mrs. Letitia Peel, a florist of Flushing, N. Y., died at her home October 12 after an illness of several weeks, aged 78 years. She had conducted a florist establishment on Old Lawrence street for twenty-six years. She is survived by four children, her husband having died a number of years ago.

AN attractive window display at this season costs but little and is sure to not only attract attention but will prove remunerative.

The National Flower Show committee has been appointed and it seems to be a settled fact that the next great show will be held in New York in 1913.

THE first of a series of biographical sketches of people of the horticultural world to be published by the Pacific Garden is of Edwin Lonsdale in the issue of October, with a very fine portrait.

THE unprecedented warm weather in most sections of the country has filled the markets with dahlias and the smaller chrysanthemum blooms are feeling the competition of this outside stock.

National Sweet Pea Society.

The executive committee of the National Sweet Pea Society of America will meet at the Parker House, Boston, Saturday, November 4, at 12 o'clock.

W. SIM, Pres.

H. A. BUNYARD, Sec'y.

Society of American Florists.

DEPARTMENT OF REGISTRATION.

As no objections have been filed, public notice is hereby given that the registration of the Begonia Feastii Bunchii by Lloyd C. Bunch of Fredonia, Kansas, becomes complete.

H. B. DORNER, Sec'y.

Important to Subscribers.

The date on the yellow address label on your copy of THE AMERICAN FLORIST will show when your subscription expires. Please renew subscription promptly on expiration to make certain of receiving your copy of each issue.

Commercial Horticulture and Science.

Letter from Prof. C. S. Sargent received and read at the meeting of the Horticultural Club of Boston October 4, 1911.

The formation in Boston of a Horticultural Club, which is intended to be national in its membership and in its field of operation, is a matter of public importance and public interest. For the first time in this country it affords opportunity for concentration and effective effort in several directions. To speak only of one of the benefits to the country, which the community has a right to expect from such an organization as you propose, it should be able to bring commercial horticulture in closer touch with science.

In most European countries are nurserymen and seedsmen whose names are known and respected by everyone who cultivates plants. These firms, for generations sometimes, have kept themselves in constant communication with the great national scientific gardens. They have often rendered these gardens important services, and through their enterprise, intelligence and forethought have done much for the world, and made themselves rich and powerful. Some of the most important botanical discoveries have been made by European nurserymen, who with rare sagacity and business good sense have hunted the world over for new plants. The remarkable increase of sugar in the beet and the greater product of the wheat field are due to the labor of a Paris firm working patiently from generation to generation along scientific lines. Such firms are looking everywhere for improvement and novelty. The principle which underlies their effort is not to supply the public with cheap and inferior material, but to find or create better material, and then teach the public to appreciate and buy it.

In this country, however, commercial horticulture is slow to take advantage of its opportunities for its own improvement and that of the public. To illustrate this, I need only refer to the Arnold Arboretum. This is a museum of trees and shrubs and a station for increasing the knowledge of such plants, by study, experiment and explorations. It has now for many years been active in the botanical exploration of North America, and more recently it has worked in Japan, Korea, Manchuria, eastern Siberia and western China. It contains the largest collection of trees and shrubs in North America, and few European collections are richer. It is well known in Europe; the heads or the principal officers of some of the national gardens have found it worth their while to cross the Atlantic to visit it; it is in constant correspondence with the principal nurseries of Europe, to which the Arboretum is greatly indebted. Every tree lover, professional or amateur, who comes to America soon turns his steps towards Forest Hills. To American commercial horticulture, the Arnold Arboretum, however, is hardly more than a name. Occasionally an American nurseryman passes an hour there, generally in the middle of a hot summer day, and then goes on his way. I do not believe there is a single one of them who know the collection or its richness in commercial possibilities. What is true of American nurserymen is true of many American park superintendents, and of most American landscape gardeners. This is a cause for general and national regret. The Arboretum fails of its duty and of its purpose, if it fails to make known to the country generally the value contained in its collection. This can only be done by nurserymen. A plant taken up by the trade in the course of a few years becomes known to thousands of people in different parts of the country, who might never have the opportunity to see the Arboretum.

I have realized for several years the necessity of closer relations between the Arboretum and the important nurserymen of the country, but our efforts to bring this about have not met with much success. A few years ago, at his request, we sent to a prominent American nurseryman a collection of rare plants, selected by himself, with the understanding that he was to propagate them and put them on the market. A few months later I found that he had sold the collection as he had received it to one of his customers. To another firm even better know than the last, the Arboretum once sent a collection of plants from Northern China, which were quite unknown at that time. A few years later I found them in the row where they had first been planted, crowded together, choked by grass and ruined. Some of the same plants sent at the same time to European nurserymen, judging by the way they have been advertised, have produced considerable sums of money.

Hardly a week passes that does not bring letters to the Arboretum asking where plants seen there can be bought. In nine cases out of ten we are obliged to send in reply the name of a European nurseryman. This usually means that the would-be purchaser goes without his plant, for it is not easy to import a single plant, or even a half dozen, and to persons not accustomed to doing business in Europe, it appears more difficult than it really is.

Here then seems to be one field of usefulness that the Horticultural Club can properly enter—the bringing about of a better appreciation than now exists of the necessity of a closer relation between American commercial horticulture and the scientific gardens and experiment stations of the country, of which the Arnold Arboretum is only one, and the most limited of them all in scope, as it deals with only two classes of plants.

Coming Exhibitions.

(Secretaries are requested to supply any omissions from this list and to correct any dates that may have been altered since the last advices.)

Chicago, March 11-17, 1912.—Spring show, Horticultural Society of Chicago, Art Institute. James H. Burdett, secretary, 1620 West 104th place, Chicago.

Cincinnati, O., November 13-18, 1911.—Fall exhibition, Cincinnati Florists' Society, Horticultural Hall-Music Hall. George S. Bartlett, secretary. 131 East Third street, Cincinnati.

Hartford, Conn., November 8-9, 1911.—Chrysanthemum show, Connecticut Horticultural Society, Putnam Phalanx Armory. Geo. W. Smith, secretary, Melrose, Conn.

Lenox, Mass., October 25-26, 1911.—Grand fall exhibition, Lenox Horticultural Society, Town Hall. Geo. H. Instone, secretary, Lenox.

Madison, N. J., October 26-27, 1911.—Sixteenth annual flower show, Morris County Gardeners' and Florists' Society, James' building, Edw. Reagan, Morristown, N. J., secretary.

Milwaukee, Wis., November 13-19, 1911.—Fall Flower Show, Milwaukee Florists' Club, Auditorium. Gustave C. Mueller, secretary, 926 Ninth street, Milwaukee.

New York, November 3-7, 1911.—Fall exhibition, Horticultural Society of New York, American Museum of Natural History, Central Park West and Seventy-seventh street. Geo. V. Nash, secretary, New York Botanical Garden, Bronx Park, New York.

New York, November 1-3, 1911.—Chrysanthemum Show, American Institute of the City of New York, 19-21 West Forty-fourth street. Wm. A. Eagleson, secretary.

New York, November 3-12, 1911.—American Land and Irrigation Exposition, Madison Square Garden. Gilbert McClurg, general manager, Singer building, New York.

Pasadena, Calif., October 27-29, 1911.—Semi-annual flower show, Pasadena Gardners' Association. John Albrecht, manager.

St. Louis, Mo., November 7-11, 1911.—Fifth fall floral exhibition and pomological display, St. Louis Horticultural Society, Coliseum, Jefferson and Washington avenues. Otto G. Koenig, secretary, 6473 Florissant avenue, St. Louis.

St. Louis, Mo., November 7-11, 1911.—Annual exhibition Chrysanthemum Society of America, in connection with the St. Louis Horticultural Society.

Stamford, Conn., November 3-4, 1911.—First annual exhibition, Westchester and Fairfield Horticultural Society, Casino. J. B. McArdle, secretary, Merritt building, Greenwich.

Tarrytown, N. Y., October 31-November 2, 1911.—Thirteenth annual exhibition, Tarrytown Horticultural Society, Music hall. E. W. Neubrand, secretary, Tarrytown, N. Y.

Worcester, Mass., November 9, 1911.—Chrysanthemum exhibition, Worcester County Horticultural Society, Horticultural hall, 18 Front street. Leonard C. Midgley, secretary, Worcester, Mass.

Wants, For Sale, Etc

One Cent Per Word, Cash with Adv.

For Plant Advs., See Read yReference Section.

Where answers are to be mailed from this office enclose 10 cents extra to cover postage, etc.

Situation Wanted—Florist, German all-around man wishes position good references; Chicago preferred. Key 492, care American Florist.

Situation Wanted—Young man wants place as fireman; 17 years experience; good Chicago references. Address Key 504, care American Florist.

Situation Wanted—By traveling salesman; 15 years' experience; well acquainted with plants, seeds and florists' supplies; a hustler; can speak German. Key 494 care American Florist.

Situation Wanted—An A1 carnation and chrysanthemum grower wishes to secure a situation with a reliable firm; can furnish the best of references, for further particulars, Address Key 506, care American Florist.

Situation Wanted—By storeman. An expert designer and first class salesman, capable of taking charge is desirous of securing a situation in or near Chicago; first-class references. Address Key 510, care American Florist.

Situation Wanted—As clerk in retail or wholesale business fifteen years experience; am well posted in all branches of the business can furnish first-class references. Address Key 503, care American Florist.

Situation Wanted—Hollander; single, age 26, as assistant on commercial or private place, latter preferred; well up in greenhouse work and vegetable lines; wishes steady position. FLORIST, care Box 41, Western Springs, Ill.

HOLTON & HUNKEL CO.

462 Milwaukee St., MILWAUKEE, WIS.

Milwaukee.

GOOD DEMAND.

The demand for stock the past week has been very good and as a result a large quantity of roses and carnations found a very ready sale. The stock in general is arriving in splendid condition, especially American Beauty, Richmond, Killarney and White Killarney roses, lily of the valley, carnations and chrysanthemums. Some good dahlias are still being offered, but the end of this crop is to be looked for almost any day. Some very good violets are to be seen and the demand has been fairly good. Wholesaler and retailer alike are now realizing that the vacation days are over and are once again buckling down to business when not engaged in making preparations for a record-breaking flower show.

NOTES.

H. V. Hunkel, the enterprising manager of the flower show, is a busy man these days making preparations for the coming event. He is mailing four letters, one each week, to the prospective grower who might possibly exhibit stock, urging him to make a showing and make his entries as early as possible. Growers in all sections of the country are cordially invited to make exhibits and those who intend doing so would confer a great favor to the manager by communicating with him immediately. Do it now, for the show will be held on November 15-16-17-18-19, inclusive, and as the dates are rapidly approaching it will not do to waste any time. The various committees are hard at work and from present indications the coming show promises to even outclass the famous show of 1910, which, as everyone knows, was certainly some show.

H. W. Koerner, the well known gladioli and dahlia grower, is cutting a choice grade of dahlias that are of exceptionally good quality. To form some idea of the magnitude of Mr. Koerner's business, one should visit his 30-acre dahlia fields, where he will find many old and new varieties in bloom at present that will greatly surprise him. Snow Storm, Early Bird, Golden Nugget and Glowing Beauty are some of the new seedlings that are looking exceptionally fine and that should make a good showing for themselves when they are placed on the market in the near future. To fully describe and do justice to this grower's many novelties would fill a book, and as time and space does not permit, we refrain by saying it is well worth one's time to visit and inspect this well known grower's place.

The wedding of Miss Alice M. Currie, daughter of James Currie, president of Currie Bros. Co., and Harold M. Drew of Chicago was solemnized on Saturday, October 14. The happy young bride is a general favorite with the many members of the trade, who all join with her many friends in their best wishes for a pleasant journey on the sea of matrimony and sincerely hope that all her troubles will be little ones. The happy couple will make their home in Kenosha, where Mr. Drew is interested in the Rambler automobile works of that city.

The American Beauty roses that Holton & Hunkel Co. is cutting are of prize-winning quality, with fine large buds on long stems, well clothed with luxuriant foliage. Lily of the valley, with fine large bells, of the Holton & Hunkel quality, is seen in all its glory at this well known firm's store this week. The plant trade is picking up considerably and as a result a large quantity of kentias and araucarias are shipped out daily, some as far as Winnipeg, Can.

Wm. Zimmermann is now the proud possessor of a new 20-h. p. Ford delivery car, which he says is just the thing for the florist's delivery purposes.

Peter Nohos takes great pleasure in telling his many friends about the bouncing baby girl that arrived on Friday, October 13. Not such an unlucky day after all.

Walter M. Maas made a trip to Grand Rapids this week to arrange the decorations for a large wedding that occurred on Wednesday, October 18. Chrysanthemums, lilies, greens, wild smilax and cedar branches were used extensively in the decorations, which, under the watchful eye of Mr. Maas, proved to be something elaborate.

Gust Rusch & Co. are now comfortably located in their new wholesale store at 448 Milwaukee street, where they are open for business with a choice grade of roses, carnations and all other seasonable stock. An exceptionally fine grade of dahlias in all colors was seen at this store this week.

The C. C. Pollworth Co. is cutting a large quantity of choice stock, with Golden Glow, Smith's Advance and October Frost chrysanthemums showing up exceptionally fine. C. C. Pollworth and wife spent Sunday at Cedar Lake.

George Fowler, a near relative of James Currie, and a Minister of Education in New Zealand, stopped off here a few days to attend the Drew-Currie wedding, after which he left to complete his tour around the world.

J. Neubeck, the accommodating salesman and designer at the M. A. McKenney Co.'s store, celebrated his third wedding anniversary at his home on Sunday, October 15.

Frank Rigas is planning on staging the old Grecian play, "Cyclops of Euripedes," in Chicago in the very near future.

F. D. Dilger, who has a reputation for growing choice bulb stock, is busy with his planting this week.

STOCK OF FINE QUALITY.

The dull, dark weather still continues, though somewhat of an improvement over that which was furnished the growers of this section during September, but its effect is plainly seen upon the quantity of stock arriving in the market, for there is a decided shortening up in the shipments, especially of roses. But chrysanthemums are now being received in large numbers and to a great extent the decrease in the quantity of roses sent in is not severely felt. The Queen of Autumn is beginning to assert herself and during her reign for the next four weeks the other flowers will to a great extent be forced from their ordinary high position. Chrysanthemums of all colors, all shapes and all sizes now are the prominent flowers on the market, from the small pompons to the large incurved Japanese varieties. There has been a large addition to the varieties on sale a week ago, and Miss Virginia Poehlmann, Donatello, Ivory, Polly Rose, Pacific Supreme, Glory of the Pacific are prominent flowers offered for sale during the week. The demand for American Beauty roses holds up well notwithstanding the quantity of chrysanthemums received, and these roses find a purchaser about as soon as they arrive at the wholesale stores. The other roses feel the rivalry of the autumn queen more keenly, but owing to the diminished cut there is no great surplus and the better stock does not remain long on the grower's or wholesaler's hands. Much of this stock is of superb quality and at the prices at which it is quoted and sold the purchaser is getting full value for his money. Carnations are in good supply and do not seem to feel the poor growing weather, or perhaps the sale of this flower is more affected by the influx of chrysanthemums for there seems to be plenty for all demands in the hands of the growers. Violets are improving very rapidly, the bunches are larger and there are some with that deliciously sweet odor to be procured now. The demand for orchids is increasing rapidly, there being orders booked for these flowers ahead, so that there are but very few blooms to be seen offered for sale. On some days the orders on hand take all the available stock as soon as it arrives. Lilies are in splendid shape, some excellent flowers of grand substance being seen, but they move slowly. The white chrysanthemums seem to have taken their place in the displays and large funeral work. Lily of the valley is of excellent quality and is receiving a good call, the fall weddings creating a demand for this flower so necessary for these occasions. The only outdoor stock now to be seen on the market in any quantity is dahlias and cosmos, some very nice shipments of the former still being received, and those that are packed in boxes so that they are not handled until they reach the retail stores come out in superb condition. Cosmos is displayed in large bunches of long-stemmed flowers and makes a great showing either in the windows or on the counters. There is a grand supply of greens of excellent quality and already is heard quotations of the stock of greens for the holiday season.

NOTES.

The J. B. Deamud Co. is receiving some very excellent violets, the bunches being of good size and the flowers very sweet. Some very fine chrysanthemums were also noticed at the store the last week of exhibition size and in all the leading varieties.

Otto Kuehnel & Co. have leased their greenhouse at 6027 Wood street to John Michal, which will give Mr. Kuehnel the much needed time to attend to the business in the store at 3510 South Halsted street and the nursery at Muskegon, Mich.

President Farenwald of the American Rose Society was a visitor last week, calling on the local rose growers. He reports plans for the big rose show at Detroit in January progressing favorably.

John Schillo says that business the past year has been very satisfactory, and that his firm, the Adam Schillo Lumber Co., has sold more pecky cypress than they ever did on any year before.

P. Papas, who formerly did the buying for John E. Lapes, Cedar Rapids, Ia., is now proprietor of the floral department in the Wabash Fruit & Flower Co's. store, 502 South Wabash avenue.

The Superior Machine & Boiler Works will furnish the boilers for Peter Nepper's range of greenhouses in Rogers Park and also John Lieders' range in Evanston.

H. N. Bruns, the well-known West Madison street florist, is using the street cars quite extensively for advertising purposes.

Raichart & Krejci, the West Twenty-sixth street florists, have been very busy the past week with wedding and funeral work.

J. J. Hess, Omaha, Neb., was on the market October 16 enroute to Wisconsin, where he will spend a brief vacation.

Curtis Kindler, of the Raedlein Basket Co., has returned from a business trip to Milwaukee, Wis.

Thos. McAllister, of the A. Lange force, has fully recovered from a sprained ankle.

E. O. Orpet, Lake Forest, left for the east on a vacation trip October 16.

POEHLMANN'S FANCY VALLEY
EXTRA FINE HARRISII LILIES
We make these a specialty. Can supply them all the Year. Once tried you will have no other

The stock at the Poehlmann Bros. Co.'s greenhouses at Morton Grove is in the finest possible shape. The chrysanthemums are in elegant condition and many prizewinning blooms are promised, and the roses and carnations are fully up to the high standard which this firm has maintained for the last few years. A very large cut of cattleyas is promised from the 20,000 plants now growing at the greenhouses, the daily cut at present being from 150 to 200 blooms.

Wietor Bros.' large supply of American Beauty roses contains some very choice blooms that are of the prizewinning quality. The heads are large, the stems are good and the foliage is of that dark pleasing color. This firm is now booking orders for chrysanthemums for All Saints' and All Souls' day.

Peter Reinberg is cutting heavily in Killarney, White Killarney, Richmond, American Beauty roses and white, pink and yellow chrysanthemums and carnations. The trade at this store has been very good and keeps Tim Matchen and his force of assistants busy filling the many orders.

Vaughan & Sperry are particularly strong on a fancy grade of medium and long-stemmed American Beauty roses. The shipping trade is very brisk and as a result a large quantity of choice stock is shipped out daily.

Chas. W. McKellar is receiving large shipments of choice Cattleya labiata, Cattleya Trianae and Denbrobiun formosum. He finds a very good demand for the latter, due mainly to the scarcity of gardenias.

The Chicago Flower Growers' Association is the recipient of a very choice grade of Virginia Poehlmann chrysanthemums, as good a grade as can be found in the market.

Bassett & Washburn are supplying their customers with a choice grade of stock of all kinds, especially choice blooms of white, yellow and pink chrysanthemums.

"The Busiest House in Chicago"

Extra Fancy **Roses, Carnations, Lilies, Dahlias, Lily of the Valley, Orchids,** and a large supply of **Greens** of all kinds.

Phones { L. D. Central 3155 / Automatic 44389 } 160 N. Wabash Ave., CHICAGO

M. B. Steczynski and E. Misicwicz returned on October 15 from St. Louis where they attended the annual convention of the Polish National Alliance society.

Increasing business has caused H. Van Gelder, manager of Percy Jones, Inc., to increase his store force, Wm. Abrahamson being the latest addition.

White and yellow Mdlle. Clementine Touset chrysanthemums of the finest possible quality can be seen at the J. A. Budlong store this week.

Zech & Mann are showing a fancy grade of roses, carnations and chrysanthemums in addition to a large supply of greens of all kinds.

C. H. Hudson, representing Benjamin Hammond, Fishkill-on-Hudson, N. Y., called on the trade here this week.

Mrs. E. Suder and Miss Tillie Reimeiner of Toledo, O., were in the city on business and pleasure combined.

Henry Wittbold and his force of assistants have been kept very busy with decorations the past week.

E. E. Benthey, better known as Ed., is now employed in E. H. Hunt's cut flower department.

F. O. Fransen has enlarged his store on Summerdale avenue and now has a 46-foot frontage.

Steve Minon will open a store near Milwaukee and Powell avenues in the very near future.

Fred Schramm has commenced to cut Golden Glow and Ivory chrysanthemums.

George Reinberg is filling a large number of orders for Richmond rose plants.

John Kruchten says his gardenias are sold long before they reach the store.

The florists all wore the union tag on Monday, October 16. Tag day.

Mrs. W. C. Johnson, Fargo, N. D., was a welcome visitor this week.

G. H. Pieser is still seriously ill.

WIETOR BROS.

162 N. Wabash Ave., CHICAGO.

The stock in Frank Oechslin's greenhouses on Quincy street is in the best of condition and some choice araucarias, palms, ferns and other decorative plants can be seen at this establishment. The six new houses that were built this year are completely filled with stock, and judging from the way they are crowded at present one could safely say the enterprising proprietor could very easily use six more.

Weiland & Risch are cutting from a good crop of White and Pink Killarney roses and carnations and will soon be cutting chrysanthemums. Peter Risch says his coal and manure supply is in for the winter and that they are ready for whatever the cold season may bring. John Risch thinks a great deal of the new rose Melody and says it is the finest yellow in the market today.

The John C. Moninger Co. is installing a new machine for threading 8-inch pipe that will be run by an electric motor and which cost in the neighborhood of $2,500. A large stock of pipes and boilers are kept constantly on hand ready to ship at a moment's notice. Two carloads of greenhouse material was shipped to A. M. Laudry, of Independence, Mo., this week.

H. V. Hunkel, manager of the Milwaukee flower show, cordially invites the growers in this vicinity to make an exhibit at their show which will be held in Milwaukee, November 15-16-17-18-19, inclusive. The Chicago Carnation Co. has already signified their willingness to make an exhibit and will be on hand with their well known varieties.

Ed. Winterson is still suffering from a sprained ankle, although he continues to work as hard as ever. Mr. Winterson's many friends were greatly disappointed on not seeing him at the florists' club anniversary, but on hearing of his injury readily forgave him, with the understanding that he would not let it happen again.

A meeting of the Horticultural Society was held at the Art Institute October 13 to further spring flower show plans, Ernest Wienhoeber presiding. Additional members present were N. H. Carpenter, August Poehlmann, J. B. Deamud, Carl Cropp, James H. Burdett and M. Barker.

W. J. Smyth arranged a number of beautiful and artistic funeral designs on Saturday, October 14, which included an elaborate floral blanket composed of orchids, lily of the valley and white roses.

Phil Foley says the geese are flying south but he can not make that hunting trip this season owing to the tardiness of the tailors and bootmakers in getting out their large contracts.

The Auburndale Goldfish Co., 922 West Randolph street, is having a very good run of business, the demand for goldfish being exceedingly heavy.

Louis Visas is shipping large quantities of stock to his store in Duluth, Minn., which he recently purchased from W. W. Seekins.

C. F. Waters, of the Deanlan Nurseries, Balcombe, Sussex, Eng., visited the local market this week.

Andrew Chronsis, of Johnson & Chronsis, is back from a most enjoyable visit in Greece.

The A. Henderson Seed Co. reports receiving a carload of Giganteum lilies this week.

Visitors: J. F. Ammann and wife, Edwardsville, Ill.; J. E. Jones, Richmond, Ind.; Adolph Farenwald, Roslyn, Pa.

PHILADELPHIA, PA.—Godfrey Ashmann will erect a greenhouse on Thayer street west of Tenth street.

Chicago Bowling.

On Wednesday evening, October 11, the Orchids won three games from the Carnations and the Violets three games from the Roses. John Zech bowled a very good game for the Orchids and had an average of 179 for the three games played. With a little more practice the boys will again be bowling in their regular form and the score card will once again show what they can do when they are bowling at their best. Cheer up, boys! The table of the standing of the teams at the last convention will be tipped upside down, with the local team on top when the bowling is over at the convention next year. Queensberry?

The following table shows the number of games won and lost by each team to date:

	Won	Lost		Won	Lost
Orchids	6	0	Roses	2	4
Violets	3	3	Carnations	1	5

BEAUTIES

Large supply in all lengths, with good color, foliage and stem. **The Best.**

Killarneys

Both White and Pink

Are in good crop, which enables us to supply you with exceptionally fine stock. **Order now.**

Richmond

Extra fancy blooms on good stems that bear luxuriant foliage. **Fine stock.**

Carnations

Extra fancy blooms of the leading varieties, white, pink and red. **Prize-winning stock.**

Pittsburg.

STOCK OF ALL KINDS PLENTIFUL.

"While some of the week days are off one can now always depend on good Saturdays" is the way one prominent retailer well puts into words the state of business. Chrysanthemums are coming in quite plentiful and sell well. American Beauties are very plentiful, but the sales not very brisk. Roses of all kinds also move rather slowly, but carnations clean up on sight at good prices. Violets clean up nicely, but lily of the valley does not. Lilies, which have been selling so well, have now settled down to a slower pace, owing to the abundance of white chrysanthemums. Short stem yellow daisies are an addition to the stock now received. Dahlias and gladioli are still with us, but the people are tired of them.

NOTES.

Miss Kyle, of the McCallum Co., spent a few days at this firm's Cleveland store and reports that place is starting out with very good prospects. This firm is handling some American Beauties that are as good as any ever seen on this market.

Mrs. E. A. Williams has had a different window display every day, running from dahlias to cattleyas and oncidiums, which naturally attracted much attention.

Alfred McCoyd, of the Arcade flower store is back again after spending the summer in Rhode Island.

A. W. Smith is acting as buyer for his firm lately, and needless to say is a welcome visitor at the wholesale houses.

W. A. Clarke took an auto trip to New Castle with a party of friends to attend the Men's Bible Class convention.

Wm. Turner, Wilkinsburg, is cutting a nice line of chrysanthemums, which he disposes of through his store.

E. C. Ludwig can be called a dahlia king from the amount of these flowers he both grows and buys.

Allen Langhans is on a western trip in the interests of the Pittsburg Cut Flower Co.

Ben Elliott, of the John Bader Co., spent a few days in Youngstown and Cleveland.

H. L. Blind & Bro. are featuring a very nice line of roses grown at their place.

James Blankensop, of Washington, was a recent caller.

J.

Northampton, Mass.

Trade is quiet now, but from all indications we expect a good season.

H. W. Field and family will spend the winter in southern California.

F. D. Keyes has finished and planted a new greenhouse.

F.

Stamford Horticulturists.

The regular meeting of the Westchester and Fairfield Horticulture Society was held in Royal Arcanum hall, Stamford, Conn., October 13, President Stuart in the chair and 100 members present. Eight new members were elected and five applications for membership received. The exhibition committee reported that the arrangements were about completed for the first annual exhibition at Stamford November 3-4. All the members are enthusiastic and indications point to a large and successful exhibition.

The judges' report on the exhibits at the meeting were: Cultural certificate for nerines, to Jas. Stuart; for seedling carnation, to Alex. Geddes, and for collection of dahlia, to Fottler-Fiske-Rawson Co. Certificates of merit for hæmanthus, to A. Whitlaw; vote of thanks for collection of berried shrubs, to Robert Williamson; chrysanthemums, to P. W. Popp; collection of apples, to J. T. Burns, and celery and apples, to Clapboard Hall Farm.

An interesting discussion on the prevention of rust on celery and the beauty and value of berried shrubs at this time of year was participated in by the members present. President Stuart urged intending exhibitors at the show to try and be prompt in staging exhibits. The schedule of prizes and tickets are ready and can be procured by applying to

J. B. McARDLE., Sec'y.

For All Saints' Day

We are offering a large quantity of exceptionally fine white, yellow and pink **Chrysanthemum Blooms** of the finest possible quality, and for which we would be pleased to book your order now.

A Complete Line of Cut Flowers and Greens

including a fancy grade of **Beauties, Roses, Lilies, Fancy Carnations, Lily of the Valley, Violets, Green Galax, Sprengeri Asparagus and Ferns. FOR THE BEST, ORDER OF US.**

ZECH & MANN, WHOLESALE FLORISTS L. D. Phone, Central 3284 162 N. Wabash Ave. **Chicago**

Milwaukee Notes.

James M. Fox & Co. are busy moving this week into their handsome new quarters in the Colby & Abboy building, one block north of their old location. James F. Fox, who so successfully manages the floral department, is having his troubles trying to take care of the moving and arrange the decorations for four weddings which they have on hand for this week. Business with this firm has been exceptionally good, ten wedding decorations having been arranged within the past three weeks.

Fred Ernst is busy making preparations to move from his present location into his new quarters at 3117 North avenue. He has been somewhat delayed on account of the sickness of his wife, who has been seriously ill for the last three weeks in a local hospital with a severe attack of typhoid fever.

G. H. Hunkel, of the G. H. Hunkel Co., received a most pleasant call from J. C. Vaughan, the well known seedsman of Chicago. Mr. Hunkel, who is prepared for a busy season, expects to again have a large quantity of asparagus seeds with which to supply his many customers.

President Taft will be one of the 2,500 people who will sit down to a banquet at the Auditorium on Friday, October 27. Just think, it is in the same building where the flower show will be held

Mrs. F. Ennis, who recently returned from a most enjoyable visit to Portland, Seattle and other western cities, is again attending to her duties at the store, looking after the splendid trade she enjoys.

Edlefsen-Leideger Co.'s store always presents a very pleasing appearance with its neatly arranged window display of plants and cut flowers.

Mr. Retailer, it's nearly time to make preparations for that pretty table decoration that you are going to have at the coming flower show.

Miss Vollmer of the Loveland Floral Co. is looking for a banner fall trade, and the present indications certainly point that way.

The Pierron Pottery Co., 31-33 Johnson street, is manufacturing a very good line of flower pots and garden vases.

Wm. E. Dailwig has enjoyed a very prosperous business season, comparing most favorably with that of last year.

Einer Knudson, representing Hjalmar Hartmann, Copenhagen, Denmark, called upon the trade this week.

J. C. Vaughan, the well known seedsman of Chicago, attended the Dairy Show on Tuesday, October 10.

Headquarters for **ORCHIDS** and Fancy Stock

CHAS. W. McKELLAR,

162 N. Wabash Avenue, CHICAGO.

Mention the American Florist when writing

Curtis Kindler, representing the Raedlein Basket Co., Chicago, called on the trade here this week.

James Chacona says business is very good, the transient trade particularly being very lively.

Richard Lietz had some large funeral orders on October 14 that kept him busy all day.

Fred C. Kesting, West Bend, was a most welcome visitor this week.

Get on the band wagon. Boost for a record-breaking flower show.

Cincinnati.

LARGE SALES, GOOD BUSINESS.

The market at the beginning of this week presented a rather strange appearance. Asters, a quantity of them, too, were competing with chrysanthemums in the wholesale houses. Large offerings of dahlias and cosmos, the finest offered in this section for a long time, helped keep a large steady supply on hand and also aided in holding down the prices on the short and medium chrysanthemums. The sales in all lines are large and as a result general business is good. The shipping trade is increasing and takes considerable quantities of stock. As soon as the frost takes the cosmos and dahlias the market will undoubtedly tighten at once and keep the buyers hustling. The roses offered are cleaned up at sight. It would be difficult to pick out any one and say it is the best, for all are uniformly clean and of good stem and size. Carnations arrive in larger quantities as the demand about takes up the supply. Lilies are somewhat on the short side, but owing to the great quantity of other stock offered are not bringing quite the price they should. Single home-grown violets are now added to the list of offerings and with New York doubles are coming in regularly. They both find ready sales. Other offerings are lily of the valley and orchids. The amount of green goods is ample and the sale for them very satisfactory.

NOTES.

Chas. H. Hoffmeister was elected president of the senior class of the Cincinnati College of Law. His plurality over his opponent was more than one-third of the votes cast.

E. G. Gillett and Fred Gear go this week to Dayton to the meeting of the Grand Commandery of the Knights Templars of Ohio.

Special meeting of Florists' Society at the club rooms on Monday, October 23, at 8 p. m. sharp.

Frank L. Deller is a candidate on the democratic ticket for trustee of Delhi township.

P. J. Ollinger and wife have as their guest Mr. Ollinger's sister, Lena, of Aurora, Ill.

Wm. Murphy and Al. Murphy have returned from the Snow's.

Wm. Gardner was down from New Castle on Sunday.

Visitors: Chas. Knopf and C. E. Ruck, of Richmond, Ind.; Louis D. Singer, of Frankfort, Ky.; O. C. Heberling, of Georgetown, Ky.; John Corbett, of Mt. Sterling, Ky., and Fred Rupp, of Laurenceburg, Ind.

BUSY DAYS AND DULL DAYS.

Business is improving, becoming greater in volume each week as the social season approaches, but is not regular, there being dull days sandwiched in between the busy ones that are not at all to the liking of the men who have stocked up for active trade. Dahlias are still a factor, there being a large stock of all varieties to be had for the asking; that is, that the present method of handling this flower is to have the growers only send in the stock when ordered, which allows no over-supply and insures only the best stock and a fair price. There has been no damage from frost as yet—October 16. Chrysanthemums in pink, white and yellow are now to be had in quantity. The early varieties have sold very well this season, few if any good flowers going to waste, and the returns have been very satisfactory. Varieties now in are Early Snow, Polly Rose, Pacific Supreme, Monrovia, Glory of the Pacific and October Frost. While very fair sized blooms are seen, the largest being Pacific Supreme. Next week will see the big fellows, when Harris sends in his first Florence Harris and Col. D. Appleton, two very fine yellows. The growers all report that this will be a great year for the Queen of Autumn. Roses are coming fast, each week adding greatly to their size, color and substance. Double Killarney, with 24-inch stems and large buds, looks very classy. Prince de Bulgarie it looks as if we will have to drop the title, looks like a comer. Melody is also carried by all the stores as necessary to complete the stock. American Beauties are fine and it looks as if there will be a good stock of this great favorite the coming season. Cattleyas are plentiful and very fine, lily of the valley up to the demand, violets getting better every day.

NOTES.

The first boxwood plants have arrived with quality in the smaller popular window box sizes away down and prices bounding skyward. Mr. Strohlein, of H. A. Dreer, says that the very dry season of the past summer in Europe has interfered with their growth, and this, together with the great demand for the smaller sizes the past year or two, has reduced the stock and raised the price. Larger sizes, pyramids, etc., are about the same price as last season, but the 15-20-25-cent stock of last year will sell for 20, 25 and 30 cents, with only about half the importation, so that late comers will likely be disappointed.

Berger Brothers, who have to move their business on account of the sale of their store which, with other properties, has been taken for a large hotel site, have been on the fence for a while back, but have finally concluded to locate toward the Niessen center and have leased Nos. 140-142 North Thirteenth street, where they will have much better facilities than before in which to carry on their rapidly increasing business.

An important change in the policy of the H. A. Dreer corporation is the discontinuance of the importations of azaleas for the trade. For a number of years quantities of plants have been brought over for the convenience of their customers, something over 40,000 annually, but after a close looking into the matter after last season's business it was decided to discontinue this line.

Leo Niessen has increased his expansive smile, and has a right to be well pleased with the new home of the company. It has certainly been excellently planned and will greatly expedite their rapidly growing business.

The London Flower Shop opened their new store at Eighteenth and Chestnut streets on Saturday, October 14. They have taken the entire building, the upper floors being let out as offices.

K.

National Association of Gardeners.

A meeting of the executive committee of the National Association of Gardeners was held in Horticultural Hall, Philadelphia, Tuesday, October 10, to complete arrangements for the forthcoming convention to be held in Madison, N. J., on Friday, October 27.

The convention will be called to order at two o'clock in the James Building. As this is the first convention since the association has been incorporated important business will come up, principally the adoption of a new set of by-laws to conform with the charter. An election of officers will also occur, and several subjects will be brought up looking to the future welfare of this organization, which has been making rapid strides within the past year. It is expected that J. K. M. L. Farquhar, of Boston, will address the convention on the gardeners' opportunities in this country; and J. Otto Thilow, of Philadelphia, has also promised to talk to the gardeners. Charles H. Totty, of Madison, N. J., who has just been appointed chairman of the National Flower Show committee will talk to the gardeners to urge them to lose no time in preparing for the next national show, which it is expected and hoped will be held in New York City in March, 1913.

A large attendance is looked for, and as the annual show of the Morris County Gardeners' and Florists' Society occurs in Madison on October 26-27 and will be in the same building where the convention is to be held, an additional feature of interest is added to bring many gardeners together.

OUTSIDE STOCK STILL PLENTIFUL.

There is little change in the condition of business from that of a week ago. While there has been several cool nights, there has not been a killing frost, and the market is yet full of outside stock. Chrysanthemums are now arriving in quantity and some of the stock is fair. Golden Glow, Polly Rose and October Frost are the varieties most seen.

NOTES.

October 15, being the fifteenth anniversary of the marriage of Mr. and Mrs. Wm. F. Gude, friends to the number of five hundred assembled at their home on the evening of that date. The occasion was a joyous one and a large number of beautiful presents were left as tokens of appreciation. The Florists' Club of Washington presented a large and very beautiful cut-glass punch bowl. Among those noticed in the receiving line were District Commissioner Rudolph and wife, Assistant Postmaster General De Graw and wife, Louis Dent and wife and other well known people. Such a large and spontaneous gathering was a fine tribute to the popularity of this worthy couple, whom the years touch but lightly.

The marriage of Harry Robey and Miss Isabelle Davidson took place on the evening of October 12 at the home of A. B. Garden, the bride's uncle. Only members of the two families were present. Rev. Geo. M. Cummings of the Garden Memorial Presbyterian church officiated. Mr. Robey has been employed by Mr. Garden since boyhood and for a number of years has been manager of his sales department. Mrs. Robey is a native of Scotland, but for the past two years has made her home in this country. The happy couple have the good wishes of many friends.

H. A. Klopper, for the past eight years with J. H. Small & Sons as a designer, is about to leave the city for Oregon, where he has bought a fruit farm and will engage hereafter in that branch of horticulture. Mr. Klopper is a very skillful designer and an excellent citizen and we regret his departure. He is the kind of a man who will be an acquisition to the community where he settles, so our loss will be their gain. Wishing him and his young wife and child long life and prosperity, we bid them Godspeed.

More and more are we impressed with the versatility of the descendants of Father Penn. One day they burn a negro, another day they give a dinner to George Watson. What will they do next?

Harry A. Bunyard of New York spent a day in this city last week on his return from a southern trip. He went on to Philadelphia in time for the Watson dinner.

F. H. Kramer is making quite a hit with Chinese lilies, Roman hyacinths and narcissus, put up in handsome pans, rooted and ready for forcing.

A. F. F.

Worcester, Mass.

The annual fall exhibit of the Worcester County Horticultural Society was held Thursday, October 12, in Horticultural Hall, Worcester, Mass. There was an excellent showing of fruit, and also, considering the heavy frosts of the past week, a fine display of flowers. A display of rare shrubs was shown by William Anderson, gardener for Bayard Thayer, of Lancaster, while the feature of the exhibit was a display of hothouse plants shown by George McWilliam, gardener for G. Marstan Whitin, of Whitinsville. The platform of the hall was banked with palms from the greenhouses of H. F. A. Lange.

Before the show a banquet was served to the members of the society, numbering about 125, followed by a short program of speeches. President Edw. W. Breed, of Clinton, presided and he spoke of the loss which the society suffered upon the death of Adin A. Hixon, who was secretary and treasurer for 20 years. Other speakers were Walter D. Ross, who announced that Mrs. H. Will Harris, Adrian, Mich., won the $50 which his company (Ross Bros.) offered for the largest yield of Eureka corn in the United States, and J. B. Castner, of Hood River, Ore., who advised that eastern(er) men stay home and grow apples equal to the western ones.

The awards were:

Cut flowers—Allyne W. Hixon, Walter Ross, Mrs. Edward Warren, Mrs. Willis C. Beveridge, Mrs. W. E. Sargent, A. E. Adams, Mrs. Wesley C. Ward, Mrs. Scott T. Pierce, Mrs. Percy C. Forbes, Miss Lucy M. Coulson, Mrs. Fred Reed, Roger N. Perry, O. J. Putnam, Mrs. A. E. Underwood, Mrs. M. A. Maynard, David C. Murdock, Mrs. Jerome Buckingham, Mrs. W. J. Hurlburt.

George McWilliam, for display of potted plants grown on G. Marstan Whitin estate, Whitinsville, $10; for display of cut flowers, $5.

Belleflower—H. C. Shepard, first; E. & H. Ward Moore, second; Mrs. A. C. Underwood, third; George C. Rice, fourth.

William Anderson, for display of shrubs grown on the Thayer estate, Lancaster, $10.

Leicester sweet—Eliot and H. Ward Moore, first; Louis J. Kendall, second.

H. F. A. Lange, for display of plants, $7.50.

TRADE IMPROVING.

The weather has been warm during the last week and the expected frost has not arrived. Trade has, however, picked up, and there have been quite a few weddings. Dahlias are plentiful and the fancy varieties are bringing fair prices. Quite a few American Beauty roses are in and chrysanthemums are coming in more freely. Violets are still small. Roses are of fairly good quality. Some extra fancy white and pink Killarney are seen. Carnations also are improving in quality.

NOTES.

The St. Louis Florists' Club met last Thursday, there being 20 members present. The committee of trustees, Frank Weber, E. W. Guy and W. Young, were appointed to make the necessary arrangements to give the visiting florists a banquet during the visit of the Chrysanthemum Society of America. David Geddes, with the Ayres Floral Co., gave a very interesting talk on how the St. Louis boys were entertained by their Chicago brothers. Three new members were elected, including J. E. Muldron, of Kirkwood, Mo., and George Madson, of Alton Floral Co.

Anna Bova, sister of Dominic Bova of the Red Bud Floral Co., was married Sunday to Dominic Montia. The following florists, A. J. Benson, George H. Angermueller, Harry Schechter, Charles Schoenle, attended the reception and had a glorious time.

Ostertag Bros. had a very large wedding decoration last Tuesday in which gardenias, orchids, American Beauties, lily of the valley and lilies were used.

Robert Newcomb, representing Vaughan's Seed Store, Chicago, was in the city.

H. G. Berning is receiving some nice Gov. Herrick violets. W. F.

Sprengeri, Plumosus Sprays		3 00

LA CROSSE, WIS.—The autumn has been exceptionally fine, there not having been the slightest frost as yet and the outdoor flowers have been unusually fine, with the result that the flower trade has been only fairly good this fall. The stock in the greenhouses is coming along nicely, especially the chrysanthemums, roses and carnations.

A DROP IN PRICES.

There has been a slight tumble in values during the past week, and as we said at the last writing that the reverse might happen and it did. Chrysanthemums are in strong; everyone seems to have had the same thoughts at one time about cutting. There are some good blooms and some poor ones and some that are about half developed—what might have been a good flower if left for some time was spoiled. We have heard of a sermon on stones, but a sermon on flowers can be heard any day when going the rounds. We are liable to have a few weeks' dullness at this time, but trade is not going to the "bow-wows" by any means. This is the beginning of our annual depression; the same thing has happened every year for the past two decades, ever since chrysanthemums have been grown in quantity, and it is likely to happen every year. They are a gorgeous flower and enhance the season with their beauty. There are some growers who grow them well and others who make a mess of them; but we are all human, and if we were all smart the world wouldn't probably move as fast, and it gives the scribes a chance to say something. Carnations are coming in more plentifully and have dropped in price. Roses are as good at this time as in any year we can remember, and the pick of varieties is greater. The "Brides, Maids and Beauties" slogan has long since passed, and a new era has come and the rose grower is forging ahead faster than he ever did. The growing part has not materially changed; the same methods that grew roses years ago grow them today. The quality is no better, but there are more varieties at his command that he can present before the public, and it has been shown that the public at large know a new thing when they see it, whether breakfast food or roses, and of course the way a thing is advertised counts for much in its ultimate success. He or she who puts the food into a box and keeps it there generally finishes at the tail end of the procession. There are a few bright lights in the trade who know how to advertise in like manner as in other trades. Printer's ink is great when judiciously used and placed properly before the public or trade. We have listened to so-called spellbinders or hot air men giving trade talks and otherwise; some got more advertising from a few bunches of vowels than ought to be accorded; some get up and talk on subjects that they are somewhat hazy about and some cute reporter writes a few brilliant notes on Mr. Blank's scholarly address. It's a great game.

BUSINESS VERY SATISFACTORY.

There is no question but what the cut flower market is in a very satisfactory condition. While the supply of chrysanthemums has greatly increased, everything has been sold at an early hour. Even dahlias are doing remarkably well, but the average price obtained is much lower than the previous week. Orchids are still in limited supply and in good demand. The quality of the cattleyas, Dendrobium formosum and oncidium in the market is especially good. Gardenias are improving in quality and meeting with ready sale. Violets are arriving in better shape but do not clean up as well as they should. In roses American Beauties are plentiful. As usual at this season of the year the specials do not meet with such ready sale. The top prices on Bridesmaids, Brides, Killarneys, My Maryland and Richmond are a little lower. Carnations seem to do as well as anything in the market, that is, especially the better quality of blooms which are disposed of readily at the highest quoted prices. Chrysanthemums are now in much larger quantities, and some of the varieties are especially fine. There is a good supply of lily of the valley of first class quality, and lilies are doing remarkably well. Sweet peas of good grade are occasionally seen and meet with only fair sale. Violets are coming in in larger quantities of better quality and there is quite enough for all the demand.

NOTES.

The annual fall exhibition of the Horticultural Society of New York will be held in the American Museum of Natural History, November 3-7. A premium list carrying about $1,500.00 has been prepared. A little over one-third of this amount is allotted to the chrysanthemum, covering bush, standard, grafted and single-stem plants and cut flowers. There are many prizes for orchids in collections, novelties, individual plants in bloom and cut flowers. Roses, carnations, fruits and vegetables, and foliage and decorative plants are also included in the premiums as well as prizes for decorations and floral pieces, and it is hoped that those who make a business of this sort of decorative work will appreciate the opportunities offered at this exhibition. Schedules may be procured upon application to the secretary, George V. Nash, New York Botanical Garden, Bronx Park.

The National Flower Show committee held a meeting at Traendly & Schenck's store October 16, with the following members present: Chairman Chas. H. Totty, W. P. Craig, Thomas Roland and W. A. Manda. Show matters in general were gone over and a visit of inspection was made to the new Grand Central palace. The committee seemed favorably impressed with the building as being satisfactory in every way to hold such an exhibition. Should the committee decide to have the show in New York they will have the hearty co-operation of the management of the new Grand Central Palace in making the show the great success it deserves to be. Ex-President Frank H. Traendly and Secretary-Elect John Young attended the meeting.

Thorwald Jensen, who died October 9 at Mamaroneck, N. Y., was famous many years ago as a carnation grower, two of the varieties he grew especially fine being Buttercup and Portia. These were all consigned to Theodore Roehrs, long since retired from the wholesale business.

The fine lilies seen at P. J. Smith's are grown by A. S. Burns, Jr., Spring Valley, N. Y. Mr. Smith has been suffering with a very severe cold and for a few days John Raynor stepped in and helped him out. It seemed quite natural to see Mr. Raynor at the old stand.

Robert McMillan, who died recently at Greenwich, Conn., was formerly a grower at Pearl River, N. Y., making a specialty of chrysanthemums and mignonette. He is survived by a widow who will continue the retail cut flower business at Greenwich, Conn.

Exceptionally good prices are being obtained for palms in the auction rooms of both Wm. Elliott & Sons and The McNiff Horticultural Co. Louis Schmutz, Jr., the secretary of the latter, is a son of the well known plantsman, Louis Schmutz, of Flatbush.

The Growers' Cut Flower Co., of which J. J. Coan is the efficient manager, have been receiving magnificent chrysanthemums, the best probably being Beatrice May. The members of this concern held a meeting in the Hotel Breslin Saturday, October 14.

Traendly & Schenck are very much pleased at the business outlook and have apparently an unlimited supply of orchids and chrysanthemums of exhibition quality. Recently they have been making large shipments of orchids out of town.

J. D. Cockcroft of Northport, L. I., has a new seedling carnation, No. 310, color similar to Mrs. C. W. Ward, which is attracting considerable attention. This carnation will be distributed in 1913.

V. Zuber & Sons, Whitestone, L. I., are shipping large quantities of dahlias and hydrangeas to Badgley, Riedel and Meyer, some days having five and six hundred bunches of dahlias, one dozen in a bunch.

W. F. Sheridan has a fine show of blooming carnations in pots which meet with ready sale and are very well grown. They are sent in from the John Birnie greenhouses.

Henry Eicke, long and favorably known to the seed and bulb trade of this city and for several years with Stumpp & Walter Co., is now with Vaughan's Seed Store.

Probably the finest Beatrice May chrysanthemums in the market are being received by the Growers' Cut Flower Co. from Kramer Bros. Farmingdale, L. I.

Wm. Becker, at Farmingdale, has two places on which are being grown 350,000 chrysanthemums, and markets his flowers through three wholesale dealers.

M. Ford is receiving chrysanthemums in pots from Robert & John Leach, of Jersey City, that are exceptionally good.

J. K. Allen has a display of fine chrysanthemum plants from Chas. Hunt, Port Richmond, Staten Island.

George T. Schuneman is sending in sweet peas of fine quality. These are handled by William Ford.

L. Ussing, aged 75 years, an old established grower of Cranford, N. J., died Saturday, October 9.

Wm. Badgley, of Badgley, Reidel & Meyer, is serving on the grand jury at Morristown, N. J.

Mrs. Mary Vincent, formerly Mrs. Thomas Lovell Russell, died in Brooklyn Saturday last.

Visitors: Edmund Welch, son of P. Welch, Boston; M. A. Patten, Tewksbury, Mass.

The New York Florists' Bowling Club held a regular meeting at Thum's alleys, Broadway and Thirtieth street, Friday, October 13, at 6:30 p. m. The scores made were as follows:

Chadwick	181	204	227	207
Young	132	143	151	134
Scott	115	156	138	135
Rickards	155	156	167	159
Nugent	113	103	90	119
Holt	111	151	140	111
Shaw	130	99	121	105
Kakuda	171	144	165	200

Nassau County Horticultural Society.

The annual dahlia show of the Nassau County Horticultural Society was held in Pembroke Hall in connection with the October meeting on Wednesday afternoon, October 11. The awards were as follows:

Best collection dahlias, not to exceed 50 varieties—Silver cup, offered by Henry A. Dreer, Philadelphia, "to be won three times," awarded to E. M. Townsend, Oyster Bay (James Duthie, gardener); H. J. Bucknall (Geo. Barton, gardener), second.

Best collection dahlias, not to exceed 25 varieties—Silver cup, presented by Mrs. Benjamin Stern, Roslyn, won by E. M. Townsend; James Kirby, second.

Best 12 cactus dahlias, 12 varieties—James Kirby, first; E. M. Townsend, second.

Best 12 decorative dahlias, 12 varieties—H. J. Bucknall, first.

Best vase 12 single dahlias, distinct—Parker D. Handy (J. O'Brien, gardener), first; E. M. Townsend, second.

Best vase 12 cactus dahlias, one variety—James Kirby, first; E. M. Townsend, second.

Best vase 12 decorative dahlias, one variety—E. M. Townsend, first; H. J. Bucknall, second.

Vase peony flowers, dahlias mixed, six varieties—H. J. Bucknall, first; E. M. Townsend, second.

Six cactus dahlias, six varieties—Emmett Queen (Geo. Ashworth, gardener), first; D. F. Bush (Ernest Westlake, gardener), second.

Twelve dahlias, mixed, any type—H. L. Pratt (Henry Gaut, gardener), first; F. G. Smithers (V. Cleres (gardener), second.

Best vase pompon dahlias—J. Ingram, first; H. L. Pratt, second.

Best vase decorative dahlias—D. F. Bush, first.

Best vase of cosmos—E. A. Reidenbach, first.

Best vase of gladiolus—V. Cleres, first; E. A. Reidenbach, second.

Best two varieties of apples, three of each—Capt. Delamar (R. Marshall, gardener), first.

Best vase of cosmos pink—H. L. Pratt, first.

Best six varieties of apples, three of each—Capt. Delamar, first; H. L. Pratt, second.

Best four varieties outdoor grapes, three bunches of each—H. L. Pratt, first; Capt. Delamar, second.

For exhibition—Seedling dahlias, J. O'Brien; vase of dahlias, A. Walker; vase of dahlias, E. M. Townsend; collection of orchids, Julius Roehrs Co.; collection of apples, Geo. Dorber; collection of vegetables, Wm. Fitting, honorable mention.

The regular monthly meeting was held at 7 p. m., President Trepess occupying the chair. John McMillan and Guiseppe Marmorale were elected to active membership; there were also two petitions for membership. Mrs. F. Doubleday, of Locust Valley, was elected an honorary member. J. W. Everett, James McDonald and Paul Reul were appointed judges of the monthly exhibits and their decisions were as follows: Celery, Jas. Robinson, first; cabbage, F. Petroccia, first; cosmos, F. Petroccia, first. James Duthie, winner of the Dreer and Stern silver cups, was presented with these cups by President Trepess. Julius Roehrs offered $10 for competition at the fall show and a letter was read from Vaughan's Seed Store offering a prize for the fall show. The donors were accorded a very hearty vote of thanks. The society's prize in November will be for three white chrysanthemums and three pink and yellow.

E. WESTLAKE, Sec'y.

TACOMA, WASH.—The second annual dahlia show was held September 16 and was very successful.

LARGE STOCK

Kentias AND Araucarias

Exceptionally fine, clean, well grown, healthy plants.

Ready for immediate shipment. Order now.

PRICE LIST

Kentia Belmoreana

We have a very large stock of these; we doubt if there is another as large in the west. Prices are right and so are the plants. You won't be wrong to order a nice assortment of them.

		Per doz.
Kentia Belmoreana,	4-inch, 14 inches high	$ 3 00
"	5-inch, 16 inches high	6 00
" "	6-inch, 18 inches high	9 00
" "	6 inch, 20 inches high	12 00
" "	6 inch, 22 inches high	15 00
		Each
" "	6-inch, 25 inches high	$1 50
" "	6-inch, 30 inches high	2 00
" "	7-inch, 34 inches high	2 50

HOLLY

Have 8 years' experience packing holly in cases. 2x2x4. Parties wanting good quality Virginia Holly can have their wants supplied by writing T. J. EUBANK. Brown's Store, Va.

Cleveland.

FLOWERS ARRIVE IN LARGE QUANTITIES.

"Mum's" the word now, and they are coming in in quantity. The quality, too, is good for early varieties. Monrovia, Golden Glow, October Frost and Glory of the Pacific are a few of the varieties. Violets have made their appearance. The quality is good but it is a little too early for this winter favorite. The dark weather still continues and the result is stock is not quite so plentiful. The light frosts did not do much damage to the dahlias and the flowers still arrive in large quantities. Carnations have advanced a little in price owing to a slight shortage. Roses still continue plentiful in all varieties and grades and of greens of all kinds there is an abundance.

NOTES.

F. C. Witthuhn and wife have returned from their western trip, which was cut short on account of their son Walter having come in contact with poison ivy here. He was quite badly poisoned and unable to assist in the work, so it was thought advisable to have Mr. Witthuhn return at once. He is recovering rapidly and soon expects to be back at his work.

Frank A. Friedly is rapidly improving and soon expects to be back in the harness. C. F. B.

FANCY FERNS, $1.25 per 1000.

New Crop Galax, Bronze or Green..... $1.25 per 1000; 10,000, $7.50

The Seed Trade.

American Seed Trade Association.

Leonard H. Vaughan, Chicago, President; Marshall H. Duryea, New York, First Vice-President; Edgar Gregory, Marblehead, Mass., Second Vice-President; C. E. Kendel, Cleveland, O., Secretary and Treasurer.

Next annual convention, June, 1912.

SEPTEMBER rains are reported to have helped the lily of the valley crop in Germany.

THE tuberose crop is likely to turn out about like that of last year, possibly a little better.

CHICAGO.—Prices on the Board of Trade, October 18, for grass seed were noted as follows: Timothy, $13.50 to $15.50 per 100 pounds.

HOLLY prospects are reported good, though exact conditions in usual shipping sections are not yet know, because of the dangers to the foliage.

BOUQUET GREEN is being gathered in the Wisconsin woods and prospects should be fair, though local buyers are slow to report and pickers are believed to be holding back some stock. Rain and water-filled swamps have delayed the gathering.

BULB trade generally, both wholesale and retail, continues good. Roman hyacinths go rather slow; Narcissus Paper White Grandiflora are pretty well cleaned up, and so are Chinese; Giganteum lilies are coming in and hardy Japan lilies of first shipments are due soon.

THE Mel L. Webster Co., seedsmen of Independence, Ia., has opened a branch house at Waco, Texas. The foundations laid by Mr. Webster for good stocks and straightforward business dealings should greatly aid in building up rapidly a good trade in the Lone Star state.

MICHIGAN reports on garden beans indicate that the crop is fairly safe except on the low land. Edible beans have been damaged considerably, though on light soils the crop is pretty well cared for. Almost incessant rain has influenced to some extent the market for commercial beans and clover seed. Most of the clover is under cover, but threshing has been delayed because of the wet weather.

Canadian Seed Law.

The following are some of the interesting provisions of the Canadian Seed Control Act of 1911:

PROHIBITORY CLAUSES.

No person shall sell, or offer, expose or have in his possession for sale, for the purpose of seeding, any seeds of cereals, flax, grasses, clovers or forage plants, except timothy, alsike, red clover and alfalfa, unless they are free from any seeds of noxious weeds, unless every receptacle, package, sack or bag containing such seeds, or a label securely attached thereto, is marked in a plain and indelible manner—

(a) with the full name and address of the seller;

(b) with the name of the kind or kinds of seed;

(c) with the common name or names of the noxious weeds, the seeds of which are present in the seed sold, or offered, exposed or had in possession for sale.

Every person who, by himself or through the agency of another person, shall sell, or offer, expose or have in his possession for sale, for seeding in Canada, any seeds of timothy, red clover, alsike or alfalfa, or any mixture containing the said seeds, in or from any receptacle, package, sack or bag, shall cause such receptacle, package, sack or bag, or a label securely attached thereto, to be marked in a plain and indelible manner—

(a) with the full name and address of the seller;

(b) with the name of the kind or kinds of seed in letters not less than half an inch in length, with a designation of the grade of seed, which shall include one of the following four marks, namely: Extra No. 1, No. 1, No. 2, No. 3; provided, however, that such marks may be accompanied by any other private mark or brand if such private mark or brand is not inconsistent with or marked more conspicuously than the one of the said four marks which is to be used with the said receptacle, package, sack or bag.

No person shall sell, or offer, expose or have in his possession for sale any seeds of timothy, alsike, red clover or alfalfa, in or from any receptacle, package, sack or bag, upon which is marked—

(a) "Extra No. 1" unless such seeds are pure as to kind, clean, sound, plump, of good color, free from the seeds of any noxious weeds, and contain not more than thirty seeds of all kinds of weeds including other useless or harmful plants per ounce of the seed so marked;

(b) "No. 1" unless such seeds are clean, sound, reasonably plump, of good color, contain not more than five noxious weed seeds per ounce of timothy, red clover or alfalfa, or ten of them per ounce of alsike seed and not more than one hundred seeds of all kinds of weeds including other useless or harmful plants per ounce of the seed so marked;

(c) "No. 2" unless such seeds are reasonably clean, sound, contain not more than twenty noxious weed seeds per ounce of timothy, red clover or alfalfa, or forty of them per ounce of alsike seed and not more than two hundred seeds of all kinds of weeds, including other useless or harmful plants, per ounce of the seed so marked;

(d) "No. 3" unless such seeds contain not more than eighty seeds of noxious weeds per ounce of timothy, red clover, or alfalfa, or one hundred and sixty of them per ounce of alsike seed and not more than four hundred seeds of all kinds of weeds, including other useless or harmful plants, per ounce of the seed so marked.

No person shall sell, or offer, expose or have in his possession for sale, for the purpose of seeding in Canada, any seeds of timothy, alsike, red clover, alfalfa or any mixture containing the said seeds, if the seeds of noxious weeds or other useless or harmful plants are present in a greater proportion in the seed sold, or offered, exposed or had in possession for sale, than the maximum number of such seeds that is permitted for seed that may be marked "No. 3," as defined in section 8 hereof.

No person shall sell, or offer, expose or have in his possession for sale, for seeding, any seeds of cereals, flax, grasses, clovers, forage plants, field roots or garden vegetable crops which are not capable of germinating in the proportion of two-thirds of the percentage standard of vitality for good seeds of the kind, unless every receptacle, package, sack or bag containing such seed, or a label securely attached thereto, is marked in a plain and indelible manner with the name of the kind of seed and the percentage of the seeds that are capable of germination.

No person shall sell, or offer, expose or have in his possession for sale, for the purpose of seeding, garden seeds, including both vegetable and flower seeds, in sealed packets, commonly known to the trade as "papered seeds," unless the same are marked in 18-point

Cottage Gardens Company, Inc.
QUEENS, NEW YORK

CHRYSANTHEMUMS

Having disposed of our surplus stock plants of **Advance**, we are now in position to take orders for young plants, for January or February delivery, of the three following:

Smith's Advance—The earliest large-flowering white, a fine companion of Golden Glow. Can be had from July onward, according to date of planting and selecting buds. Being more dwarf and flowers more double than October Frost is a decided improvement on that variety. It has been so well received by all purchasers this season that we predict a very heavy demand. **Price: $1.20 per 10; $10.00 per 100.**

Unaka—This variety has sustained our last year description. Being a strong grower, with perfect stem and foliage, a fine incurved bloom of a pleasing shade of pink, and maturing the first week of October places it foremost among early pinks. In fact, there is no other good pink to compete with it at this date. **Price: $1.20 per 10; $10.00 per 100.**

Chrysolora—This variety is about 15 days earlier than Col. D. Appleton; is of larger size stronger stem, not as tall, in color is intermediate between this variety and Major Bonnaffon. This, with its excellent keeping qualities, places it in the front ranks of the commercial sorts. **Price: $3.00 per 10; $25.00 per 100.**

Place Your Orders Early.

Watering Lettuce.

Faulty watering is often the cause of poor crops of lettuce and entire failures. While lettuce does require great amounts of water, it is also easily injured by water, especially when air conditions are such that the plants do not dry off readily, hence the watering between October 1 and March 1 must be carefully considered. In our opinion, there is no better time to apply the bulk of the water than before the crop is planted. We have practiced a method of soaking the beds before planting that has given great results in our case and would in most other places where ground beds are used. This method is to apply the water while spading the beds. A hose is turned full stream into the ditch while the men are spading the beds; the water should be about half full in the ditch at all times. This gives a uniform bottom moisture; the beds are left rough for a day or two until the moisture has equalized itself and then the beds are raked down and planted. Each plant as soon as set is watered around the roots only, which method leaves the surface mellow and dry. No more water is given until the crop is cut, unless in bright sunshine a light sprinkling is given to prevent wilting should such occur.

This method approaches very near sub-irrigation, and has none of the dangers of sub-irrigation nor the expense. It is at once the safest, simplest and cheapest method and the results are great. The first bed we ever handled in this manner produced a record breaking crop of the finest, cleanest lettuce one could wish.

Too often beds are planted when on the dry side—the growers aiming to supply the water later on. Such beds never start off well and the whole practice must be condemned. These men are in a hurry to replant the beds, but they lose in the end. To apply our method the beds must be deep and the soil either of good heart or well filled with humus. Such beds if treated as before said will carry a crop to maturity without the everlasting slopping and puddling some growers practice. A good many lettuce diseases or troubles are directly caused by improper watering.

MARKETMAN.

Montreal.

GOOD DEMAND FOR BOSTON FERNS.

Business has been very good the last two weeks, the demand for cut flowers far exceeding the supply. The retailers are somewhat disappointed at the failure of reciprocity, but this should not greatly affect the issue, as we have to draw largely from across the line already. Chrysanthemums are in at their best and are good and fairly plentiful, but one florist remarked that the growers have not kept pace with the size of the orders that the customers turn in nowadays. Roses are about the only article that is plentiful; they are small, but clean and of good substance. Carnations are very scarce, and judging by the poor growth of the plants, will be so for some time to come. There is a good demand for pot plants, notably six-inch ferns of the Boston type, and they are bought by the bench or the load now instead of by the dozen. Bulbs are being heavily planted by all the growers. The Paper White narcissus and Roman hyacinths will soon be in bloom to help with funeral work, for which the demand is good.

NOTES.

Upon a visit to St. Anne's, Bob. Burrows was found busy harvesting the apple crop. He also has arranged to undertake extensive alterations on the grounds of R. B. Angus, besides superintending several new places which he is laying out. His carnations and roses in the U-Bar houses are a pleasure to see. The crop of vegetables growing on the fields are renowned for their excellent quality. Mr. Burrows spoke enthusiastically of the C. H. A. convention next year, and would like to see them out to St. Annes again. A 50,000-gallon water tank and supply pipes is being built for the grounds.

The bouquet to be presented to the Duchess of Connaught at the coming reception will be arranged by S. S. Bain and will contain sprigs of myrtle that were propagated from myrtle that formed the bouquet which the late Queen Victoria carried when she was married to Prince Albert in 1840. Two years ago Mr. Bain, when on a visit to England, procured cuttings from a friend who had the stock.

At the last meeting of the Montreal Gardeners' and Florists' Club it was decided to hold a chrysanthemum show on a small scale in the club rooms, and the prize list is out. Most of the growers promised to enter in one or more lines, especially in the cut bloom and big plant sections.

Williams at Clouston's was harvesting vegetables. His onions were all of exhibition size, and cauliflower looked extra fine. Mr. Williams always makes one welcome with his smile.

LUCK.

PATERSON, N. J.—The plants and shrubbery used in the decoration of the hall of the Flower show held September 23, was the display of Bobbink & Atkins of Rutherford.
